

ACADEMIC REGULATIONS (NR-25)

FOR

B.Tech Regular Four Year Degree Courses

(For the Batches Admitted From 2025-2026)

&

B. Tech (Lateral Entry Scheme)

(For the Batches Admitted From 2026-2027)

ELECTRONICS AND COMMUNICATION ENGINEERING

INSTITUTE VISION

To produce competent professionals who can contribute to the industry, research and societal benefits with environment consciousness and ethical values.

INSTITUTE MISSION

M1: Adapt continuous improvements in innovative teaching-learning practices and state-of-the-art infrastructure to transform students as competent professionals and entrepreneurs in multi-disciplinary fields.

M2: Develop an innovative ecosystem with strong involvement and participation of students and faculty members.

M3: Impart National development spirit among the students to utilize their knowledge and skills for societal benefits with ethical values.

DEPARTMENT VISION

To emerge as a Centre of excellence in Electronics and Communication Engineering by nurturing skilled professionals through innovative teaching and research, contributing to industry and societal needs with a strong focus on ethics, sustainability, and environmental consciousness.

DEPARTMENT MISSION

M1: Adopt innovative teaching methods and advanced infrastructure to foster creativity and innovation. Transform students into skilled professionals and entrepreneurs who drive socio-economic growth.

M2: Foster an innovative ecosystem in Electronics and Communication Engineering through collaboration with academia, industry, experts, and government. Promoting research and development among students and faculty.

M3: Offer advanced programs that foster research, higher education and ethical values, encouraging students to apply their knowledge and skills for national development and societal benefit.

ACADEMIC REGULATIONS (NR25) FOR B.TECH REGULAR STUDENTS
WITH EFFECT FROM THE ACADEMIC YEAR 2025-26:

1.0 Under-Graduate Degree Programme in Engineering & Technology (UGP in E&T)

Narsimha Reddy Engineering College (NRCM) offers new regulations termed as NR-25 regulations in line with National Educational Policy for four-year (eight semesters) **Bachelor of Technology (B.Tech.)** degree programme, under Choice Based Credit System (CBCS), with effect from the academic year **2025-26**.

2.0 Eligibility for Admission

- 2.1 Admissions to the undergraduate (UG) programme shall be made either on the basis of the merit rank obtained by the qualified students at the entrance test conducted by Telangana Government (EAPCET) or as per the guidelines of Telangana Council of Higher Education, subject to reservations as prescribed by the government from time to time.
- 2.2 The medium of instruction for the entire undergraduate programme in Engineering & Technology will be **English** only.

3.0 B.Tech. Programme Structure

- 3.1 A student after securing admission shall complete the B.Tech. programme in a minimum period of **four** academic years and a maximum period of **eight** academic years starting from the date of commencement of first year first semester, failing which student shall forfeit seat in B.Tech. course. Each student has to secure a minimum of 160 credits out of 164 credits for successful completion of the undergraduate programme and award of the B.Tech. degree
- 3.2 **UGC/ AICTE** specified definitions/ descriptions are adopted appropriately for various terms and abbreviations used in these academic regulations/ norms.

3.2.1 Semester Scheme

The undergraduate programme is of four academic years and there shall be two semesters in each academic year. There shall be a minimum of 15 weeks of instruction, excluding the mid- term and semester-end exams. Around 15 instruction hours, 30 instruction hours and 45 hours of learning need to be

followed per one credit of theory course, practical course and project/field-based learning respectively. In each semester, there shall be 'Continuous Internal Evaluation (CIE)' and 'Semester End Examination (SEE)' under Choice Based Credit System (CBCS). The curriculum/course structure suggested by AICTE is followed as a reference document.

3.2.2 Credit Courses

All courses offered in each semester are to be registered by the student. Against each course in the course structure, the L: T: P: SL: C (lecture periods: tutorial periods: practical periods: Self Learning: credits) pattern has been defined.

All courses offered in each semester are to be registered by the student. Against each course in the course structure, the L: T: P: SL: C (lecture periods: tutorial periods: practical periods: Self Learning: credits) pattern has been defined

- One credit is allocated for one hour per week in a semester for lecture (L) or Tutorial (T) session.
- One credit is allocated for two hours per week in a semester for Laboratory/ Practical (P) session.
- One credit is allocated for three hours per week in a semester for Project/Mini-Project (SL) session.

For example, a theory course with three credit weightage requires three hours of classroom instruction per week, totaling approximately 45 hours of instruction over the entire semester.

3.2.3 Subject Course Classification

All subjects/courses offered for the undergraduate programme in E&T (B.Tech. degree programmes) are broadly classified as follows:

S. No.	Broad Course Classification	Course Group / Category	Course Description
1	Foundation Courses (FnC)	BS – Basic Sciences	Includes Mathematics, Physics and Chemistry courses
2		ES - Engineering Sciences	Includes Fundamental Engineering Courses
3		HS – Humanities and Social Sciences	Includes courses related to Humanities, Social Sciences and Management

4	Core Courses (CoC)	PC – Professional Core	Includes core courses related to the parent branch of Engineering.
5	Elective Courses (ElC)	PE – Professional Electives	Includes elective courses related to the parent branch of Engineering.
6		OE – Open Electives	Elective courses which include inter-disciplinary courses or courses in an area outside the parent branch of Engineering.
7	Project Core	Project Work	B.Tech. Project Work
8	Other Core Courses (OCC)	Industry Training/ Internship/ Industry Oriented Mini- project	Industry Training/ Internship/ Industry Oriented Mini- Project
9		Seminar	Seminar based on core contents related to parent branch of Engineering.
10	Skill Development Courses (SDC)	-	Courses designed to help individuals gain, improve, or refine specific skills
11	Value Added Courses (VAC)	-	Courses to build professional values, traditional knowledge and sensitization of societal issues

4.0 Mandatory Induction Programme

An institution program of one week duration for the UG students entering the institution, right at the start shall be implemented. Normal classes commence only after the induction programme is conducted. Following activities could be part of the induction programme i) Physical Activity ii) Creative Arts, iii) Imparting Universal Human Values, iv) Literary Activities, v) Lectures by Eminent People, vi) Visits to Local Areas and vii) Familiarization to department as well as entire institute and viii) Making students understand Innovative practices at the college premises etc.

5.0 Course Registration

- 5.1 A faculty advisor / mentor shall be assigned to a group of around 20 students, who will advise the students about the undergraduate programme, its course structure and curriculum, choices/options of the courses, based on their competence, progress, pre-requisites and interest.

- 5.2 The academic section of the college invites 'registration forms' from students before the beginning of the semester through 'on-line registration', ensuring 'date and time stamping'. The online registration requests for semester courses shall be completed two weeks before the commencement of SEEs (Semester End Examinations) of the preceding semester.
- 5.3 A student can apply for **on-line** registration, **only after** obtaining the '**written approval**' from faculty advisor/mentor, which should be submitted to the college academic section through the Head of the Department. A copy of it shall be retained with the Head of the Department, faculty advisor/ mentor and the student.
- 5.4 A student shall register for all the courses offered in a semester as specified in the course structure.
- 5.5 Course options exercised through **on-line** registration are final and **cannot** be changed; further, alternative choices also will not be considered. However, if the course that has already been listed for registration by the Head of the Department in a semester could not be offered due to any inevitable or unexpected reasons, then the student shall be allowed to have alternative choice either for a new course (subject to offering of such a course), or for another existing course. Such alternative arrangements will be made by the Head of the Department, with due notification and time-framed schedule, within **a week**, but before the commencement of class- work of the semester.
- 5.6 The Head of the Department / Course Coordinator should review vacant slots in the timetable of each section once in every week or fortnight. The vacant slots in the time-table may be allocated to the subject teachers who could not take classes in proportion to the number of weeks completed from the commencement of the semester.
- 5.7 Two faculty members may be allocated for the tutorial session of problematic course for better interaction/practice and to minimise the failures in the subject.
- 5.8 **Professional Electives:** The students have choose six Professional Electives (PE-I to PE-VI) from the six baskets of professional electives given. Students have the flexibility to choose from the list of professional electives offered by the department or opt to register for the equivalent Massive Open Online Courses (MOOCs) as listed from time to time by the Institute.
- 5.9 **Open Electives:** Students have to choose three Open Electives (OE-I, II & III) from three baskets of Open Electives given by other than the parent department or opt to register for the equivalent Massive Open Online Courses (MOOCs) as listed

from time to time by the Institute. However, the student can opt for an Open Elective course offered by his parent department, if the student has not studied that course so far. Similarly, Open Elective courses being studied should not match with any courses of the forthcoming semesters.

5.10 Provision for Early Registration of MOOCs:

For a professional elective or open elective in a semester, students are allowed to register for an equivalent MOOCs course listed from time to time by the Institute one semester in advance. For example, a Professional Elective of III Year II Semester shall be allowed to register under MOOCs platform in III year I Semester.

The credits earned in one semester in advance can be submitted in the subsequent semester for the assessment.

The students who have registered in advance in an equivalent MOOCs course and fail to secure any pass grade in the MOOCs course, can register for the regular course offered in the following semester of their course structure.

5.11 Conversion of Marks Secured in MOOCs into Grades: Marks secured in the internal and external evaluations of a MOOCs course shall be scaled to 40 and 60 marks respectively. The sum of these two components shall be considered as the total marks out of 100. The corresponding grade shall then be determined as per the marks-to-grades conversion rules specified in Clause 10.3.

5.12 MOOCs are allowed for professional and open elective courses and for a few Minors & Honors courses.

5.13 Additional learning resources:

Students are encouraged to acquire additional course-related knowledge by auditing learning resources from MOOCs platforms for each course offered in their course structure. These additional courses are not meant for earning credits but are intended to enhance knowledge. The Institute shall notify such courses from time to time through their portals for the benefit of students. They are categorized into three types: prerequisite, reinforcement, and aspirational. Prerequisite courses help students gain familiarity and provide sufficient background. Reinforcement courses aim to offer different perspectives on learning, while aspirational courses focus on next-level or advanced learning.

6.0 Rules to offer Elective courses

6.1 An elective course may be offered to the students, only if a minimum of 25% of class strength opts for it.

- 6.2 Same elective course for different sections may be offered by different faculty members. The selection of elective course by students will be based on first come first serve and / or CGPA criterion.
- 6.3 If the number of students registrations are more than the strength of one section, then it is choice of the concerned Department to offer the same course for more than one section based on the resources available in the department.

7.0 Attendance requirements:

- 7.1 A student shall be eligible to appear for the semester-end examinations, if the student acquires a minimum of 75% of aggregate attendance of all the courses for that semester.
- 7.2 Shortage of attendance in aggregate upto 10% (securing 65% and above but below 75%) in each semester may be condoned by the college academic committee on genuine and valid grounds, based on the student's representation with supporting evidence.
- 7.3 A stipulated fee shall be payable for condoning of shortage of attendance as notified in the respective college websites.
- 7.4 **Two hours** of attendance for each theory course shall be considered, if the student appears for the mid-term examination of that course.
- 7.5 Shortage of attendance below 65% in aggregate shall in **no** case be condoned.
- 7.6 Students whose shortage of attendance is not condoned in any semester, are not eligible to take their semester-end examinations of that semester. They get detained and will not be promoted to the next semester. Their registration for that semester shall stand cancelled, including internal marks. They may seek re-registration for that semester in the next academic year.
- 7.7 A student fulfilling the attendance requirement in the present semester shall not be eligible for readmission into the same semester.

8.0 Criteria for Earning of Credits in a Course

- 8.1 A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each course, if the student secures not less than 35% (21 marks out of 60 marks) in the semester end examinations (SEE), and a minimum of 40% (40 marks out of 100 marks) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together; in terms of letter grades, this implies securing 'C' grade or above in that course.

- 8.2 A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to Field Based Research Project / Industry Oriented Mini Project / Internship, if the student secures not less than 40% marks (i.e. 40 out of 100 allotted marks) in each of them. The student is deemed to have failed, if he/she (i) does not submit a report on Field-Based Research Project/Industry Oriented Mini Project/ Internship, or (ii) not make a presentation of the same before the evaluation committee as per schedule, or (iii) secures less than 40% marks in Field-Based Research Project / Industry Oriented Mini Project / Internship evaluations.
- 8.3 A student eligible to appear in the semester-end examination for any course, is absent from it or failed (thereby failing to secure 'C' grade or above) may re-appear for that course in the supplementary examination as and when it is conducted. In such cases, internal marks assessed in continuous internal evaluation (CIE) earlier for that course will be carried over, and added to the marks obtained in the SEE supplementary/make-up examination. If the student secures sufficient marks for passing, 'C' grade or above shall be awarded as specified in clause 10.3.

9.0 Distribution of Marks and Evaluation

- 9.1 The performance of a student in every course (including Value Added Courses and Skill Development Courses, Laboratory/Practical and Project Work) will be evaluated for 100 marks each, with 40 marks allotted for CIE (Continuous Internal Evaluation) and 60 marks for SEE (Semester End-Examination), irrespective of the credits allocated.

9.2 Continuous Internal Evaluation (CIE)

9.2.1 Theory Courses:

For theory courses, during a semester, there shall be two mid-term examinations. Each Mid- Term examination consists of two parts

- i) **Part – A : Objective/quiz paper for 10 marks.**
- ii) **Part – B Descriptive paper for 20 marks. totaling to 30 marks.**

Total duration of mid-term examination is two hours.

The objective/quiz paper is set with multiple choice, fill-in the blanks and match the following type of questions for a total of 10 marks (with a weightage of 4M from Unit-1, 4M from Unit-2, 2M from Unit-3 for Mid-I Examination and 2M from Unit-3, 4M from Unit-4, 4M from Unit-5 for Mid-II Examination).

While the first mid-term examination shall be conducted on 50% of the syllabus,

the second mid-term examination shall be conducted on the remaining 50% of the syllabus. Questions will be drawn from the mid-term exam syllabus, ensuring uniform coverage of all topics.

The remaining 10 marks of Continuous Internal Evaluation are distributed as follows:

1. Student shall submit two assignments and the **average of 2 Assignments** each for 5 marks shall be taken. The first assignment should be submitted before the conduct of the first mid-term examination, and the second assignment should be submitted before the conduct of the second mid-term examination.
2. Five marks for the Viva-Voce/PPT/Poster Presentation/Working Model/Case Study on a topic in the concerned subject. This assessment shall be completed before II Mid- Term Examination.

9.2.2 **Engineering Drawing and Computer Aided Drafting Course:**

For this course, 20 marks will be allocated for day-to-day assessments conducted during drawing practice sessions, and another 20 marks will be allocated for the mid-term examination. In the mid-term examination, students shall attempt any four out of six given questions. The first mid-term exam will be conducted in the conventional mode using a drawing board, while the second mid-term exam will be conducted using a CAD package.

9.2.3 **Practical Courses:**

For practical courses there shall be a Continuous Internal Evaluation (CIE) during the semester for 40 marks and semester-end examination for 60 marks. The breakup of the continuous internal evaluation for 40 marks is as follows:

1. 10 marks for a write-up on day-to-day experiments in the laboratory (in terms of aim, components/procedure, expected outcome).
2. 10 marks for viva-voce (or) tutorial (or) case study (or) application (or) poster presentation of the course concerned.
3. 10 marks for the internal practical examination conducted by the laboratory teacher concerned.
4. The remaining 10 marks are for Laboratory Report/Project and Presentation, which consists of the Design (or) Software / Hardware Model Presentation (or) App Development (or) Prototype submission which shall be evaluated after completion of laboratory course and before semester end practical examination.

9.3 **A Computer-Based Test (CBT)** in each course is available for students who either:

1. missed one of the two mid-term examinations due to unavoidable circumstances, or
2. attended both mid-term examinations but wish to improve their internal marks.

The CBT will be conducted at the end of the semester and will carry a total of 30 marks. The marks obtained in the CBT will be considered equivalent to those obtained in one mid-term examination. Zero marks will be awarded to students who are absent from the mid-term examination. The average of the best two scores from the three exams (the two mid-term exams and the CBT), combined with other internal assessment components, will constitute the Continuous Internal Improvement (CII) marks for that specific course. CBT exams shall be conducted by the Institute.

9.4 **Semester End Examination for theory courses**

9.4.1 **Theory Courses:**

The semester end examinations (SEE), for theory courses, will be conducted for 60 marks consisting of two parts viz. i) **Part- A** for 10 marks and ii) **Part - B** for 50 marks.

- Part-A is compulsory, consists of five short answer questions covering all units of syllabus; each question carries two marks.
- Part-B consists of five questions carrying 10 marks each. There shall be two questions asked in the question paper from each unit with either-or choice and the student should answer either of the two questions. The student shall answer one question from each of five units.

9.4.2 **Engineering Drawing and Computer Aided Drafting Course:**

Question paper consists of five questions carrying 12 marks each. There shall be two questions asked in the question paper from each unit with either-or choice and the student should answer either of the two questions. The student shall answer one question from each of five units.

There shall be no section with short answer questions.

9.4.3 **Duration of SEE:**

The duration of Semester End Examination of theory and drawing courses is 3 hours.

9.5 **Semester End Examination for Practical Courses:**

The Semester End Examination for practical courses shall be conducted with an

external examiner and the laboratory course teacher. The external examiner shall be appointed from the college outside their cluster.

In the Semester End Examination for practical courses held for 3 hours, rubrics of evaluation for 60 marks is as given below:

1. 10 marks for write-up
2. 15 for experiment/program
3. 15 for evaluation of results
4. 10 marks for presentation on another experiment/program in the same laboratory course and
5. 10 marks for viva-voce on concerned laboratory course.

For any change of experiment, 5 marks will be deducted from the total of 60 marks. If second time change of experiment is requested, another five marks will be deducted from the 60 marks. No third change will be permitted.

9.6 Field-based Research Project:

There shall be a Field-based Research Project in the intervening summer between II-II and III-I Semesters. Students will register for this project immediately after II Year II Semester examinations and pursue it during summer vacation. The Field-based Research Project shall be submitted in a report form and presented before the committee in III year I semester. It shall be evaluated for 100 external marks. The evaluation committee shall consist of an External Examiner, Head of the Department, Supervisor of the Project and a Senior Faculty Member of the department. There shall be no internal marks for Field-based Research Project. Student shall have to earn 40% marks, i.e 40 marks out of 100 marks. The student is deemed to have failed, if he (i) does not submit a report on the Project, or (ii) does not make a presentation of the same before the committee as per schedule, or (iii) secures less than 40% marks in this course.

9.7 Internship/Industry Oriented Mini Project:

There shall be an Internship/Industry Oriented Mini Project in collaboration with an industry from their specialization. Students shall register for this project immediately after III Year II Semester Examinations and pursue it during summer vacation. Internship should be carried out at an organization (or) Industry. The Industry Oriented Mini Project shall be submitted in a report form and presented before the committee in IV Year I Semester before the semester end examination. It shall be evaluated for 100 external marks. The committee consists of an External Examiner, Head of the Department, Supervisor of the Industry Oriented Mini Project/Internship, and a Senior Faculty Member of the

Department.

- 9.7.1 For evaluating industry-oriented mini-projects, it is preferable to appoint an external examiner from the industry, ideally from one of the organizations/ industries with which the institute has established / proposing to establish collaborations.

9.8 UG Project Work:

- 9.8.1 The UG project work shall be initiated at the beginning of the IV Year II Semester and the duration of the project work is one semester. The student must present in consultation with his/her supervisor, the title, objective and plan of action of his/her Project work to the departmental committee for approval within two weeks from the commencement of IV Year II Semester. Only after obtaining the approval of the departmental committee, the student can start his/her project work.

- 9.8.2 Student has to submit project work report at the end of IV Year II Semester. The project work shall be evaluated for 100 marks. Out of which 40 marks and 60 marks are allocated for CIE and External Evaluation respectively.

- 9.8.3 For internal evaluation, the departmental committee consisting of Head of the Department, Project Supervisor and a Senior Faculty Member shall evaluate the project work for 40 marks. The distribution of marks is as follows:

Objective(s) of the work done	- 05 Marks
Methodology adopted	- 15 Marks
Results and Discussions	- 15 Marks
Conclusions and Outcomes	- 05 Marks
TOTAL	- 40 Marks

- 9.8.4 The External Evaluation shall be conducted by the external examiner for a total of 60 marks. It shall comprise the presentation of the work, communication skills, and viva-voce, with a weightage of 20 marks, 15 marks, and 25 marks respectively.

The topics for main Project shall be different from the topic of Industry Oriented Mini Project/ Internship/SDC. The student is deemed to have failed, if he (i) does not submit a report on the Project, or (ii) does not make a presentation of the same before the External Examiner as per schedule, or (iii) secures less than 40% marks in the sum total of the CIE and SEE taken together.

9.8.5 For conducting viva-voce exam of project work, Principal selects an external examiner from the list of experts in the relevant branch submitted by the Head of the Department.

9.8.6 A student who has failed, may re-appear once for the above evaluation, when it is scheduled again; if student fails in such 'one re-appearance' evaluation also, he/she has to appear for the same in the next subsequent year, as and when it is scheduled.

9.9 Skill Development Courses:

Four Skill Development Courses are included in the Curriculum in II-I, II-II, III-I and III-II semesters. Each Skill Development Course carries one credit. The evaluation pattern will be same as that of a laboratory course including the internal and external assessments.

The objective of Skill Courses is to develop the cognitive skills as well as the psycho-motor skills.

9.10 Value-Added Courses:

The evaluation of Value-Added Courses shall be similar to that of theory courses. However, the scheduling of these mid-term exams and semester-end examinations may not be combined with main-stream examinations. One hour /45 mins proctored mid-term examination shall be conducted in the regular class by the same subject teacher. It should not impact the conduct of other classes on that day.

The scheduling of the semester-end examinations shall also be intimated by the Institute time to time.

10.0 Grading Procedure

10.1 Absolute grading system is followed for awarding the grades to each course

10.2 Grades will be awarded to indicate the performance of students in each Theory, Laboratory, Industry-Oriented Mini Project/ Internship/ Skill development course and Project Work. Based on the percentage of marks obtained (Continuous Internal Evaluation plus Semester End Examination, both taken together) as specified in clause 8 above, a letter grade shall be given as explained in the following clause.

10.3 To measure the performance of a student, a 10-point grading system is followed. The mapping between the percentage of marks secured and the corresponding letter grade is as follows:

Range of % of Marks Secured in a Course	Letter Grade	Grade Points (GP)
Greater than or equal to 90	O (Outstanding)	10
80 and less than 90	A ⁺ (Excellent)	9
70 and less than 80	A (Very Good)	8
60 and less than 70	B ⁺ (Good)	7
50 and less than 60	B (Average)	6
40 and less than 50	C (Pass)	5
Below 40	F (FAIL)	0
Absent	Ab	0

- 10.4 A student shall be declared successful or 'passed' in a semester, if he/she secures '**C**' grade or above in every course (ie GP ≥ 5).
- 10.5 A student who has obtained an '**F**' grade in any course shall be deemed to have '**failed**' and is required to re-appear for a supplementary exam as and when conducted. In such cases, internal marks in those courses will remain the same as those obtained earlier.
- 10.6 To a student who has not appeared for an examination in any course, '**Ab**' grade will be allocated in that course, and he/she is deemed to have '**Failed**'. Such student will be required to re-appear for supplementary/make-up exam as and when conducted. The internal marks in those courses will remain the same as those obtained earlier.
- 10.7 The students earn a Grade Point (G) in each course, on the basis of letter grade secured in that course. Every student who passes a course will receive grade point **GP ≥ 5** ('C' grade or above).
- 10.8 The 'Credit Points' (C) are computed by multiplying the grade point with credits for a given course.

$$\text{Credit Points (C)} = \text{Grade Point (G)} \times \text{Credits}$$

- 10.9 The Semester Grade Point Average (SGPA) is calculated only when all the courses offered in a semester are cleared by a student. It is calculated by dividing the sum of credit points (ΣCG) secured from all courses registered in a semester, by the total number of credits registered during that semester. SGPA is rounded off to **two** decimal places. SGPA for each semester is thus computed as

$$\text{SGPA} = \{ \Sigma N C_i G_i \} / \{ \Sigma N i=1 C_i \}$$

where 'i' is the course indicator index (considering all courses in a semester), 'N' is the no. of courses registered for the semester (as listed under the course structure of the branch), C_i is the no. of credits allotted to the i^{th} course, and G_i

represents the grade points corresponding to the letter grade awarded for that i^{th} course.

- 10.10 If a student earns more than 160 credits, only the courses corresponding to the best 160 credits shall be considered for the computation of CGPA of B.Tech. degree.

The Cumulative Grade Point Average (CGPA) is a measure of the overall cumulative performance of a student in all semesters considered for registration. The CGPA is the ratio of the total credit points secured by a student for the courses correspond to best 160 credits out of **all** registered courses in **all** semesters, and the total number of credits correspond to those selected courses. CGPA is rounded off to **two** decimal places. CGPA is thus computed at the end of each semester, from the I year II semester onwards, as per the formula

$$\text{CGPA} = \{ \sum^M C_j G_j \} / \{ \sum^M C_j \}$$

where '**M**' is the total no. of courses corresponding to the best 160 credits from the courses registered in all eight semesters, '**j**' is the course indicator index (takes into account all courses from 1 to 8 semesters), C_j is the no. of credits allotted to the j^{th} course, and G_j represents the grade points (GP) corresponding to the letter grade awarded for that j^{th} course.

Illustration of the Calculation of SGPA:

Course	Credits	Letter Grade	Grade Points	Credit Points
Course 1	4	A	8	4 x 8 = 32
Course 2	3	O	10	3 x 10 = 30
Course 3	3	C	5	3 x 5 = 15
Course 4	3	B	6	3 x 6 = 18
Course 5	3	A	8	3 x 8 = 24
Course 6	2	A+	9	2 x 9 = 18
Course 7	1	C	5	1 x 5 = 5
Course 8	1	O	10	1 x 10 = 10
	20			152

$$\text{SGPA} = 152/20 = 7.6$$

The CGPA of the entire B.Tech. programme shall be calculated considering the best 160 credits earned by the student

- 10.12 For merit ranking or comparison purposes or for any other listing, **only** the '**rounded off**' values of the CGPAs will be used.

- 10.13 SGPA of a semester will be mentioned in the semester Memorandum of Grades if all courses of that semester are cleared in first attempt. Otherwise, the SGPA shall be mentioned only on the Memorandum of Grades in which sitting he passed his last exam in that semester.

11.0 Declaration of Results and issue of Grade Memo

- 11.1 While declaring the results, the web-version should display the marks earned by the students with the internal and external marks break-up. However, in the memorandum of grades, the marks need not be shown

After the completion of each semester, a certificate of memorandum of grades shall be issued to all the registered students, indicating the letter grades and credits earned. It will show the details of the courses registered (course code, course title, no. of credits), letter grade and credits earned.

12.0 Withholding of Results

- 12.1 If the student has not paid the fees to the Institute at any stage, or has dues pending due to any reason whatsoever, or if any case of indiscipline is pending, the result of the student may be withheld, and the student will not be allowed to go into the next higher semester. The award or issue of the degree may also be withheld in such cases.

13.0 Supplementary Examinations:

- 13.1 At the end of each semester, along with regular semester examinations, supplementary examinations shall be conducted for the students who have back-log subjects.

- 13.2 Advanced supplementary examinations in IV Year II Semester courses may be conducted for those who failed in any course offered in IV Year II Semester. It may enable the students to receive their B.Tech. provisional certificate at an early date. Advanced supply examinations may be scheduled within one month period after the declaration of the final semester results.

There shall be no supplementary examination in the successive semester. The students who could not secure any pass grade in advance supplementary examinations have to wait for regular series examination of next batch to write their back-log examination.

14.0 Promotion Rules

S.No.	Promotion	Conditions to be Fulfilled
1	First year first semester to first year second semester	Regular course of study of first year first semester and fulfilment of attendance requirement.
2	First year second semester to Second year first semester	(i) Regular course of study of first year second semester and fulfilment of attendance requirement (ii) Must have secured at least 25% of the total credits up to first year second semester from all the relevant regular and supplementary examinations, whether the student takes those examinations or not.
3.	Second year first semester to Second year second semester	Regular course of study of second year first semester and fulfilment of attendance requirement.
4	Second year second semester to Third year first semester	(i) Regular course of study of second year second semester and fulfilment of attendance requirement. (ii) Must have secured at least 25% of the total credits up to second year second semester from all the relevant regular and supplementary examinations, whether the student takes those examinations or not.
5	Third year first semester to Third year second semester	Regular course of study of third year first semester and fulfilment of attendance requirement.
6	Third year second semester to Fourth year first semester	Regular course of study of third year second semester and fulfilment of attendance requirement.
7	Fourth year first semester to Fourth year second semester	Regular course of study of fourth year first semester and fulfilment of attendance requirement.

15.0 Re-admission after Detention

- i. A student detained due to lack of credits, shall be promoted to the next academic year only after acquiring the required number of credits.
- ii. A student detained due to shortage of attendance shall be admitted in the same semester in the successive academic years.

- iii. When a student is readmitted in the following academic years, the academic regulations under which the student seeks re-admission shall only be applicable to this student, not the academic regulations in which he got admitted in his/her first year of study.

16.0 Credit Exemption

A student (i) shall register for all courses covering 164 credits as specified and listed in the course structure and (ii) earn 160 or more credits to successfully complete the undergraduate programme.

- Best 160 credits shall be considered for CGPA computation. The student can avail exemption of courses ***totaling up to 4 credits*** other than Professional core courses, Laboratory Courses, Seminars, Project Work and Field Based Research Project / Industry Oriented Mini Project / Internship, for optional drop out from these 164 credits registered;
- The semester grade point average (SGPA) of each semester shall be mentioned at the bottom of the grade card, when all the subjects in that semester have been passed by the student.
- Credits earned by the student in either a Minor or Honors program cannot be counted towards the required 160 credits for the award of the B.Tech. degree.

17.0 Award of Degree

- 17.1 A student who registers for all the courses specified in the course structure and secures the required number of 160 credits within 8 academic years from the date of commencement of the first academic year, shall be declared to have qualified for the award of B.Tech. degree in the branch of Engineering selected at the time of admission.
- 17.2 A student who qualifies for award of the degree as listed in item 17.1 shall be placed in the following classes.
- 17.3 A student with final CGPA (at the end of the undergraduate programme) ≥ 7.5 , and fulfilling the following conditions - shall be placed in '**First Class with Distinction**':
- i) Should have passed all the courses in '**First Appearance**'.
 - ii) Should not have been detained or prevented from writing the semester end examinations in any semester due to shortage of attendance or any other reason.

A student not fulfilling any of the above conditions with final CGPA ≥ 7.5 shall be placed in '**First Class**'.

17.4 Students with final CGPA (at the end of the undergraduate programme) ≥ 6.5 but < 7.5 shall be placed in '**First Class**'.

17.5 Students with final CGPA (at the end of the undergraduate programme) ≥ 5.5 but < 6.5 , shall be placed in '**Second Class**'.

17.6 All other students who qualify for the award of the degree (as per item 17.1), with final CGPA (at the end of the undergraduate programme) ≥ 5.00 but < 5.5 , shall be placed in '**pass class**'.

17.7 **Grace Marks:**

Grace marks shall be given to those students who complete the course work of four year B.Tech. degree, not secured pass grade in not more than three subjects and adding a specified grace marks enables the student to pass the subject(s) as well as gets eligibility to receive the provisional degree certificate.

Grace marks for students admitted under the NR-25 Academic Regulations should not exceed **0.15%** of the total maximum marks in all eight semesters (excluding the marks allocated for value added courses and skill development courses).

18.0 Award of Gold Medals

18.1 Students fulfilling the conditions listed under item 17.3 alone will be eligible for award of '**Gold Medal**'.

18.2 If more than one student secures the same highest CGPA, then the following tie resolution criteria, in the same order of preference shall be followed for selecting the Gold Medal winner, until the tie is resolved: 1) more number of times secured highest SGPA, ii) more number of O and A+ grades in that order and iii) highest SGPA in the order of first semester to eight semester.

19.0 Conversion of CGPA into equivalent Percentage of Marks

19.1 The following formula shall be used for the conversion of CGPA into equivalent marks, whenever it is necessary.

$$\text{Percentage (\%)} \text{ of Marks} = (\text{Final CGPA} - 0.5) \times 10$$

20.0 Honours and Minor Degree Programs

Honours and Minor Degree programs will be available in all branches of B.Tech. degree. Minor Degree programs will commence from II Year II Semester and continue till IV Year I semester and Honours Degree programs will commence

from III Year I Semester and continue till IV Year II semester.

21.0 Multiple Entry Multiple Exit Scheme (MEME)

21.1 Exit Option after Second Year:

Students enrolled in the 4-Year B.Tech. program are permitted to exit the program after successful completion of the second year (B.Tech. II Year II Semester). The students who desire to exit after the II year shall formally inform the exit plan one semester in advance i.e. at the commencement of II Year II Semester itself. Such students need to fulfil the additional requirements as specified in Clause 21.2 described below.

Upon fulfilling the requirements like earning all the credits up to II Year II Semester and successfully completing the additional requirements, the students will be awarded a 2-Year Undergraduate (UG) Diploma in the concerned engineering branch.

21.2 Additional Requirements for Diploma Award:

To qualify for the diploma under the exit option, students must also complete 2 additional credits through one of the following Institute-prescribed pathways:

Work-based Vocational Course:

Participation in a practical, hands-on vocational training program relevant to the engineering field, typically conducted during the summer term.

Internship/Apprenticeship:

Completion of a minimum 8-week internship or apprenticeship in their related field to gain practical industry exposure.

In addition, students must clear any associated course(s) and submit the internship/ apprenticeship report as per the Institute schedule and guidelines.

21.3 Re-entry into the B.Tech. Program

Students who have exited the B.Tech. program with a 2-Year UG Diploma may apply for re- entry into the Third Year (Fifth Semester) of the B.Tech. program.

Re-entry is subject to the following conditions:

- The student must surrender the awarded UG Diploma Certificate.
- Students who wish to rejoin in III Year must join the same B.Tech. program and same college from which the student exited. Before rejoining, students should check for continuation of the same branch at the college. If the specific branch is closed in that particular college, then student should consult the Institute for the possible alternative solutions.
- Re-registered students will be governed by the academic regulations in

effect at the time of re-entry, regardless of the original regulations under which they were admitted.

- If a student opts to continue his/her studies without a gap after being awarded the diploma, they must register for the third-year courses before the commencement of classwork.

21.4 Break in Study and Maximum Duration

Students are allowed to take a break of up to four years after completion of II Year II Semester with prior Institute permission through the Principal of the college.

Re-entry after such a break is subject to the condition that the student completes all academic requirements within twice the duration of the program (i.e., within 8 years for a 4-year B.Tech. program).

22.0 Transitory Regulations for the students re-admitted in NR-25 Regulations:

22.1 Transitory regulations are applicable to the students detained due to shortage of attendance as well as detained due to the shortage of credits and seek permission to re-join the B.Tech. programme, where NR-25 regulations are in force.

22.2 A student detained due to shortage of attendance and re-admitted in NR-25 regulations: Such students shall be permitted to join the same semester, but in NR-25 Regulations.

22.3 A student detained due to shortage of credits and re-admitted in NR-25 regulations: Such students shall be promoted to the next semester in NR-25 regulations, only after acquiring the required number of credits as per the corresponding regulations of his/her previous semester.

22.4 A student who has failed in any course in a specific regulation has to pass those courses in the same regulations.

22.5 If a student is readmitted to NR-25 Regulations and has any course with 80% of syllabus common with his/her previous regulations, that particular course in NR-25 Regulations will be substituted by an equivalent course of NR-23 regulations by the Institute. All these details are summarized in a set of look-up Table; one set for each B. Tech. branch.

22.6 Look Up Table of equivalence courses

22.6.1 A lookup table will be provided for the benefit of students. This lookup table will include all the courses to be registered by students who have been re-admitted under the NR-25 Academic Regulations from the NR-23 Academic Regulations. Separate lookup tables will be provided for the following categories of students:

1. Students re-admitted into the I Year II Semester of the NR-25 Regulations
 2. Students re-admitted into the II Year I Semester of the NR-25 Regulations
 3. Students re-admitted into the II Year II Semester of the NR-25 Regulations
 4. Students re-admitted into the III Year I Semester of the NR-25 Regulations
 5. Students re-admitted into the III Year II Semester of the NR-25 Regulations
 6. Students re-admitted into the IV Year I Semester of the NR-25 Regulations
 7. Students re-admitted into the IV Year II Semester of the NR-25 Regulations For every B.Tech. branch there shall be separate set of seven lookup tables.
- 22.6.2 Applicability of Look-up Table: The above look-up table shall be applicable for i) students who seek readmission from NR-23 regulations to NR-25 regulation for the equivalence courses.
- 22.6.3 These look-Up Tables are not applicable for the students who seek transfer from other Institution to NRCM. Such students should consult the University regarding equivalent courses.
- 22.7 The NR-25 Academic Regulations are applicable to a student from the year of re-admission. However, the student is required to complete the study of B.Tech. degree within the stipulated period of eight academic years from the year of first admission.
- 23.0 Student Transfers:**
- 23.1 There shall be no branch transfers after the completion of admission process.
- 23.2 The students seeking transfer to NRCM from various other Universities/Institutions is having back-logs at the previous University/institute, have to pass the courses offered at NRCM which are equivalent to the failed courses at the previous University/institute.
- 23.3 The transferred students from other Universities/Institutions to NRCM, shall be given a chance to write CBTs for getting CIE component in the **equivalent course(s)** as per the clearance letter issued by the University.
- 24.0 Value Added Courses**
- 24.1 Faculty members who have received a certificate in Innovation and Entrepreneurship / Entrepreneurship from a reputed foundation/organization

may be given preference to teach the "Innovation and Entrepreneurship" course. This certificate course should include an assessment. Total training duration (online or physical), excluding assessment, should be at least 30 hours. Faculty members from all disciplines with innovative mindset and aptitude to co-create an entrepreneurial ecosystem are eligible to teach this subject.

24.2 Faculty members who have credited a course on Intellectual Property Rights in their UG or PG programme or credited an equivalent course in MOOCs platform/ reputed foundation/ organization in which assessment is a part, may be given preference to teach the elective course on Intellectual Property Rights.

24.3 To ensure quality delivery and standardization in teaching the **Indian Knowledge System (IKS)** and other value-added courses, the following guidelines must be adhered to:

- i) faculty members must undergo a Faculty Development Program (FDP) organized by UGC-MMTTC (Malaviya Mission Teacher Training Centre), **or** Any other recognized and competent institution/organization offering similar certified programs,
- ii) the total instructional duration of the FDP should be a around 32 hours or more,
- iii) all sessions in the FDP must be conducted by certified and qualified resource persons with recognized expertise in the respective domains,
- iv) A formal assessment component must be included as part of the FDP.

25.0 Mapping with the Sustainable Development Goals

All the courses specified in the course structure of every programme are mapped with the one or more sustainable development goals.

26.0 Scope

26.1 The academic regulations should be read as a whole, for the purpose of any interpretation.

26.2 In case of any doubt or ambiguity in the interpretation of the above rules, the decision of the Principal is final.

26.3 The Institute may change or amend the academic regulations, course structure or syllabi at any time, and the changes or amendments made shall be applicable to all students with effect from the dates notified by the Institute authorities.

26.4 Where the words "he", "him", "his", occur in the regulations, they include "she", "her", "hers".

ACADEMIC REGULATIONS FOR B.TECH (LATERAL ENTRY SCHEME)

FROM THE AY 2026-27

Eligibility for the award of B.Tech. Degree (LES)

1. The LES students after securing admission shall pursue a course of study for not less than three academic years and not more than six academic years
2. The student shall register for 123/124 credits and secure 120 credits with CGPA ≥ 5 from II year to IV-year B.Tech. programme (LES) for the award of B.Tech. degree
3. The student can avail exemption of courses ***totaling up to 3/4 credits*** other than Professional core courses, Laboratory Courses, Seminars, Project Work and Field Based Research Project/ Industry Oriented Mini Project / Internship, for optional drop out
4. The students, who fail to fulfil the requirement for the award of the degree in six academic years from the year of admission, shall forfeit their seat in B.Tech
5. The attendance requirements of B.Tech. (Regular) shall be applicable to B.Tech. (LES).

6. Promotion rule

S. No	Promotion	Conditions to be fulfilled
1	Second year first semester to Second year second semester	Regular course of study of second year first semester and fulfilment of attendance requirement.
2	Second year second semester to Third year first semester	(i) Regular course of study of second year second semester and fulfilment of attendance requirement. (ii) Must have secured at least 25% of the total credits up to second year second semester from all the relevant regular and supplementary examinations, whether the student takes those examinations or not.
3	Third year first semester to Third year second semester	Regular course of study of third year first semester and fulfilment of attendance requirement.
4	Third year second semester to Fourth year first semester	Regular course of study of third year second semester and fulfilment of attendance requirement.
5	Fourth year first semester to Fourth year second semester	Regular course of study of fourth year first semester and fulfilment of attendance requirement.

7. All the other regulations as applicable to B.Tech. 4-year degree course (Regular) will hold good for B. Tech. (Lateral Entry Scheme).
8. LES students are not permitted to exit the B.Tech. program after completion of second year (B.Tech. II Year II Semester).

**MALPRACTICE RULES DISCIPLINARY ACTION FOR/
IMPROPER CONDUCT IN EXAMINATION**

	Nature of Malpractices/ Improper conduct	Punishment
	If the student:	
1 (a)	Possesses or keeps accessible in examination hall, any paper, note book, programmable calculators, cell phones, pager, palm computers or any other form material concerned with or related to the subject of the examination (theory or practical) in which student is appearing but has not made use of (material shall include any marks on the body of the student which can be used as an aid in the subject of the examination	Expulsion from the examination hall and cancellation of the performance in that subject only
b	Gives assistance or guidance or receives it from any other student orally or by any other body language methods or communicates through cell phones with any student or persons in or outside the exam hall in respect of any matter	Expulsion from the examination hall and cancellation of the performance in that subject only of all the students involved. In case of an outsider, he will be handed over to the police and a case is registered against him.
2	Has copied in the examination hall from any paper, book, programmable calculators, palm computers or any other form of material relevant to the subject of the examination (theory or practical) in which the student is appearing.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the student has already appeared including practical examinations and project work and shall not be permitted to appear for the remaining examinations of the subjects of that semester/year. The hall ticket of the student is to be cancelled and sent to the University. Academic planner tools
3	Impersonates any other student in connection with the examination.	The student who has impersonated shall be expelled from examination hall. The student is also debarred and forfeits the seat. The performance of the original student who has been impersonated, shall be cancelled in all the subjects of the examination (including practicals and project work) already appeared and shall not be allowed to appear for examinations of the remaining subjects of that semester/year. The student is also debarred

		for two consecutive semesters from class work and all University examinations. The continuation of the course by the student is subject to the academic regulations in connection with forfeiture of seat. If the imposter is an outsider, he will be handed over to the police and a case is registered against him.
4.	Smuggles in the answer book or additional sheet or takes out or arranges to send out the question paper during the examination or answer book or additional sheet, during or after the examination	Expulsion from the examination hall and cancellation of performance in that subject and all the other subjects the student has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The student is also debarred for two consecutive semesters from class work and all University examinations. The continuation of the course by the student is subject to the academic regulations in connection with forfeiture of seat.
5.	Uses objectionable, abusive or offensive language in the answer paper or in letters to the examiners or writes to the examiner requesting him to award pass marks.	Cancellation of the performance in that subject.
6.	Refuses to obey the orders of the chief superintendent/assistant – superintendent / any officer on duty or misbehaves or creates disturbance of any kind in and around the examination hall or organizes a walk out or instigates others to walk out, or threatens the officer-in charge or any person on duty in or outside the examination hall of any injury to his person or to any of his relations whether by words, either spoken or written or by signs or by visible representation, assaults the officer-in-charge, or any person on duty in or outside the examination hall or any of his relations, or indulges in any other act of misconduct or mischief which result in damage to or destruction of property in the examination hall or any part of the college campus or engages in any other act which in the opinion of the officer on duty amounts to use	In case of students of the college, they shall be expelled from examination halls and cancellation of their performance in that subject and all other subjects the student(s) has (have) already appeared and shall not be permitted to appear for the remaining examinations of the subjects of that semester/year. The students also are debarred and forfeit their seats. In case of outsiders, they will be handed over to the police and a police case is registered against them.

	of unfair means or misconduct or has the tendency to disrupt the orderly conduct of the examination.	
7.	Leaves the exam hall taking away answer script or intentionally tears off the script or any part thereof inside or outside the examination hall.	Expulsion from the examination hall and cancellation of performance in that subject and all the other subjects the student has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The student is also debarred for two consecutive semesters from class work and all University examinations. The continuation of the course by the student is subject to the academic regulations in connection with forfeiture of seat.
8.	Possesses any lethal weapon or firearm in the examination hall.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the student has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The student is also debarred and forfeits the seat.
9.	If student of the college, who is not a student for the particular examination or any person not connected with the college indulges in any malpractice or improper conduct mentioned in clause 6 to 8	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the student has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The student is also debarred and forfeits the seat. Person(s) who do not belong to the college will be handed over to the police and, a police case will be registered against them.
10.	Comes in a drunken condition to the examination hall.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the student has already appeared for including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year.
11.	Copying detected on the basis of internal evidence, such as, during valuation or during special scrutiny.	Cancellation of the performance in that subject and all other subjects the student has appeared for including practical examinations and project work of that semester/year examinations.
12.	If any malpractice is detected which is not covered in the above clauses 1 to 11 shall be reported to the University for further action to award a suitable punishment. Academic planner tools	

PROGRAM OUTCOMES (POs):

P01: Engineering knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.

P02: Problem analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)

P03: Design/development of solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)

P04: Conduct investigations:: Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).

P05: Engineering tool usage: Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6)

P06: The engineer and the world: Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).

P07: Ethics: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)

P08: Individual and team work: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.

PO9: Communication: Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences.

PO10: Project management and finance: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.

PO11: Life-long learning: Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)

PROGRAM SPECIFIC OUT COMES (PSOs):

PSO1: Students will be equipped to apply knowledge of algorithms, modelling, circuit design, and verification to manage electro-mechanical systems essential to the modern socio-economic framework and propose innovative solutions using advanced toolchains in electronic communication systems.

PSO2: Students will learn to understand and adapt to the evolving roles and ethical responsibilities of professionals. Emphasis will be placed on effective collaboration within dynamic and multidisciplinary environments.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOS):

PEO-I: Core Competency, Innovation, and Entrepreneurship

Graduates will apply fundamental knowledge and technical skills in Electronics and Communication Engineering to solve complex problems, drive innovation, and pursue entrepreneurial ventures that contribute to technological advancement and economic growth.

PEO-II: Industry Readiness and Collaboration

Graduates will demonstrate professional competence by effectively working in multidisciplinary teams, engaging with industry and academia, and contributing to socio-economic development through practical and sustainable engineering solutions.

PEO-III: Ethics, Sustainability, and Societal Impact

Graduates will uphold ethical values and environmental consciousness, applying their expertise responsibly to address societal needs and contribute to national development with a strong commitment to sustainability.

KNOWLEDGE AND ATTITUDE PROFILE (WK)

WK1: A systematic, theory-based understanding of the natural sciences applicable to the discipline and awareness of relevant social sciences.

WK2: Conceptually-based mathematics, numerical analysis, data analysis, statistics and formal aspects of computer and information science to support detailed analysis and modelling applicable to the discipline.

WK3: A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline.

WK4: Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline.

WK5: Knowledge, including efficient resource use, environmental impacts, whole-life cost, reuse of resources, net zero carbon, and similar concepts, that supports engineering design and operations in a practice area.

WK6: Knowledge of engineering practice (technology) in the practice areas in the engineering discipline.

WK7: Knowledge of the role of engineering in society and identified issues in engineering practice in the discipline, such as the professional responsibility of an engineer to public safety and sustainable development.

WK8: Engagement with selected knowledge in the current research literature of the discipline, awareness of the power of critical thinking and creative approaches to evaluate emerging issues.

WK9: Ethics, inclusive behavior and conduct. Knowledge of professional ethics, responsibilities, and norms of engineering practice. Awareness of the need for diversity by reason of ethnicity, gender, age, physical ability etc. with mutual understanding and respect, and of inclusive attitudes.

SUSTAINABLE DEVELOPMENT GOALS (SDGs):

SDG-1: No Poverty

- NRCM provides scholarships through state and central government schemes to over 950+ students annually.
- Institutional financial aid covers tuition and transportation for economically weaker sections.
- The Career Development Center runs skill-based training programs to uplift socio-economically disadvantaged students.

SDG-2: Zero Hunger

- Mid-day meals and subsidized food are made available for hostel and day-scholar students from poor backgrounds.
- The college practices food waste minimization through monitored mess operations and awareness programs.
- Student-led initiatives coordinate food donation drives in collaboration with NGOs.

SDG-3: Good Health and Well-being

- NRCM organizes regular medical check-up camps in collaboration with local hospitals.
- On-campus health center provides basic care and first-aid with visiting doctors on call.
- Physical education programs and wellness workshops are embedded into the campus lifestyle.

SDG-4: Quality Education

- NRCM ensures inclusive learning through bridge courses and remedial classes.
- Digital classrooms and LMS platforms are utilized to support blended learning.
- The institution partners with industries to provide internships and certification programs.

SDG-5: Gender Equality

- NRCM maintains a balanced gender ratio and has a strong anti-harassment cell.
- Women empowerment cell conducts regular workshops on leadership and self-defense.
- Female faculty and student representation is promoted in all committees.

SDG-6: Clean Water and Sanitation

- NRCM has implemented rainwater harvesting and efficient water usage systems.

- The campus ensures clean drinking water and hygienic sanitation facilities for all.
- Awareness programs on water conservation are conducted for students and staff.

SDG-7:

- **Affordable and Clean Energy**
- Solar panels have been installed on campus buildings for sustainable power.
- Energy audits are conducted periodically to monitor consumption patterns. NRCM promotes the use of LED lights and energy-efficient appliances.

SDG-8: Decent Work and Economic Growth

- The Career Development Center facilitates placements and skill development programs.
- Entrepreneurship cells and incubation support are provided for startups.
- MoUs with companies offer real-time projects and industrial exposure.

SDG-9: Industry, Innovation, and Infrastructure

- NRCM has established research labs, IoT, and AI centers of excellence.
- Technical fests and hackathons are organized to boost innovation.
- Students participate in national-level innovation competitions.

SDG-10: Reduced Inequalities

- Scholarships are offered irrespective of caste, creed, or gender.
- Student mentoring and counseling ensure inclusive academic support.
- Programs are conducted to sensitize students on equity and inclusion.

SDG-11: Sustainable Cities and Communities

- Campus greenery is maintained with over 2,000 trees and plants.
- NRCM collaborates with local bodies on urban development projects.
- Students are encouraged to design sustainable housing and smart city models.

SDG-12: Responsible Consumption and Production

- Waste segregation and recycling units are active on campus.
- Workshops on sustainable practices are included in the curriculum.
- Procurement policies emphasize eco-friendly and reusable materials.

SDG-13: Climate Action

- NRCM conducts climate change awareness campaigns and tree plantation drives.
- Environmental Science is mandatory for all students.
- Participation in the International Day for Climate Action is encouraged.

SDG-14: Life Below Water

- Students engage in coastal clean-up drives and plastic awareness campaigns.
- Environmental clubs study marine pollution and water ecosystem conservation.

- Projects on microplastic impact and aquatic health are taken up.

SDG-15: Life on Land

- NRCM maintains a botanical garden and biodiversity registers on campus.
- Tree-planting initiatives are undertaken regularly by NSS and Eco Club.
- Wildlife protection and biodiversity conservation seminars are organized.

SDG-16: Peace, Justice and Strong Institutions

- NRCM has transparent grievance redressal mechanisms and student councils.
- Sessions on ethics, human values, and constitutional duties are mandatory.
- Legal awareness and democratic participation programs are held annually.

SDG-17: Partnerships for the Goals

- NRCM actively collaborates with NGOs, industries, and academic institutions.
- Participates in global SDG networks and knowledge exchanges.
- Engages in MoUs with sustainability-focused organizations.

COURSE STRUCTURE & SYLLABUS (NR25 Regulations)

Applicable from AY 2025-2026 Batch

I Year I Semester

S. No.	Course Code	Course Name	C	L	T	P	Credits
1	25MA101	Matrices and Calculus	BS	3	1	0	4
2	25CH102	Engineering Chemistry	BS	3	0	0	3
3	25EN103	English for Skill Enhancement	HS	3	0	0	3
4	25EE104	Introduction to Electrical Engineering	ES	2	0	0	2
5	25CS105	Programming for Problem Solving	ES	3	0	0	3
6	25CH106	Engineering Chemistry Lab	BS	0	0	2	1
7	25CS107	Programming for Problem Solving Lab	ES	0	0	2	1
8	25EN108	English Language and Communication skills Lab	HS	0	0	2	1
9	25EE109	Electrical Engineering Lab	ES	0	0	2	1
10	25ME110	Engineering Workshop	ES	0	0	2	1
		Induction Program					
Total Credits				14	1	10	20

I Year II Semester

S. No.	Course Code	Course Name	C	L	T	P	Credits
1	25MA201	Ordinary Differential Equations and Vector Calculus	BS	3	0	0	3
2	25PH202	Advanced Engineering Physics	BS	3	0	0	3
3	25ME203	Engineering Drawing and Computer Aided Drafting	ES	2	0	2	3
4	25CS204	Python Programming	ES	2	0	0	2
5	25CS205	Data Structures	ES	3	0	0	3
6	25EC206	Network Analysis and Synthesis	ES	3	0	0	3
7	25PH207	Advanced Engineering Physics Lab	BS	0	0	2	1
8	25CS208	Data Structures Lab	ES	0	0	2	1
9	25CS209	Python Programming Lab	ES	0	0	4	2
Total Credits				16	0	10	21

II Year I Semester

S. No.	Course Code	Course Name	C	L	T	P	Credits
1	25EC301	Probability Theory and Stochastic Processes	PC	3	0	0	3

MATRICES AND CALCULUS

B Tech I Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25MA101	Basic Sciences	L	T	P	4	CIE	SEE	TOTAL
		3	1	0		40	60	100

COURSE OBJECTIVES:

To learn

1. How to Solve systems of linear equations using matrix methods
2. Analyzing eigenvalues and eigenvectors in diagonalization of matrices and apply them to reduce quadratic forms to canonical form
3. Geometrical approach to the mean value theorems and their application to the mathematical problems
4. Finding maxima and minima of functions of two and three variables
5. Evaluation of multiple integrals and their applications

COURSE OUTCOMES:

Student will be able to

1. Apply matrix operations to solve systems of linear equations using rank and inverse, Gauss Seidel methods
2. The student will reduce quadratic forms to canonical form using eigenvalues and eigenvectors and interpret their nature for engineering applications
3. To apply mean value theorems in analyzing functions, study and trace curves for better visualization
4. To apply partial derivatives in solving problems related to maxima, minima, and engineering applications
5. Evaluate double and triple integrals in various coordinate systems and apply them to compute areas and volumes

UNIT-I:

Matrices

Rank of a matrix by Echelon form and Normal form – Inverse of Non-singular matrices by Gauss- Jordan method. System of linear equations: Solving system of Homogeneous and Non-Homogeneous equations. Gauss Seidel Iteration Method

UNIT-II:

Eigen values and Eigen vectors

Linear Transformation and Orthogonal Transformation: Eigen values – Eigen vectors and their properties – Diagonalization of a matrix – Cayley-Hamilton Theorem (without proof) – Finding inverse and power of a matrix by Cayley-Hamilton Theorem. Quadratic forms and Nature of the Quadratic Forms – Reduction of Quadratic form to canonical form by Orthogonal

Transformation

UNIT-III:

Single Variable Calculus

Limit and Continuous of functions and its properties. Mean value theorems: Rolle's theorem – Lagrange's Mean value theorem with their Geometrical Interpretation and applications – Cauchy's Mean value Theorem – Taylor's Series (All the theorems without proof). Curve Tracing: Curve tracing in cartesian coordinates

UNIT-IV:

Multivariable Calculus (Partial Differentiation and applications)

Definitions of Limit and continuity – Partial Differentiation: Euler's Theorem – Total derivative – Jacobian – Functional dependence & independence. Applications: Maxima and minima of functions of two variables and three variables using method of Lagrange multipliers

UNIT-V:

Multivariable Calculus (Integration) Evaluation of Double Integrals (Cartesian and polar coordinates) – change of order of integration (only Cartesian form) – Change of variables for double integrals (Cartesian to polar). Evaluation of Triple Integrals – Change of variables for triple integrals (Cartesian to Spherical and Cylindrical polar coordinates). Applications: Areas by double integrals and volumes by triple integrals

TEXT BOOKS:

1. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 36th Edition, 2010
2. R.K. Jain and S.R.K. Iyengar, Advanced Engineering Mathematics, Narosa Publications, 5th Editon, 2016

REFERENCE BOOKS:

1. Erwin Kreyszig, Advanced Engineering Mathematics, 9th Edition, John Wiley & Sons, 2006
2. G.B. Thomas and R.L. Finney, Calculus and Analytic geometry, 9th Edition, Pearson, Reprint, 2002
3. N.P. Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2008
4. H. K. Dass and Er. Rajnish Verma, Higher Engineering Mathematics, S Chand and Company Limited, New Delhi

ENGINEERING CHEMISTRY

B Tech I Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25CH102	Basic Sciences	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100

COURSE OBJECTIVES:

1. To develop adaptability to new advances in Engineering Chemistry and acquire the essential skills to become a competent engineering professional
2. To understand the industrial significance of water treatment, fundamental principles of battery chemistry, and the impact of corrosion along with its control methods for structural protection
3. To impart foundational knowledge of various energy sources and their practical
4. Applications in engineering
5. To equip students with an understanding of smart materials, biosensors, and analytical techniques applicable in engineering, industrial, environmental, and biomedical fields

COURSE OUTCOME:

1. Analyze the hardness of water and apply suitable treatment methods for potable and boiler water systems
2. Explain electrochemical cell concepts and evaluate corrosion types and prevention techniques
3. Classify energy sources and illustrate the working of modern batteries, fuel cells, and synthetic fuel technologies
4. Differentiate types of polymers and explain their synthesis, properties, and applications
5. Apply knowledge of smart materials, biosensors, cement chemistry, phase rule, and lubricants to analyze their properties, mechanisms, and industrial applications

UNIT-I:

Water and its treatment:

Introduction- Hardness, types, degree of hardness and units. Estimation of hardness of water by complexometric method - Numerical problems. Potable water and its specifications (WHO) - Steps involved in the treatment of potable water - Disinfection of potable water by chlorination and break point chlorination. Defluorination - Nalgonda technique.

Boiler troubles: Scales, Sludges and Caustic embrittlement. Internal treatment of boiler feed water - Calgon conditioning, Phosphate conditioning, Colloidal conditioning. External treatment methods - Softening of water by ion- exchange processes. Desalination of brackish water – Reverse osmosis

UNIT-II:

Electrochemistry and Corrosion:

Introduction- Electrode potential, standard electrode potential, Nernst equation (no derivation), electrochemical cell - Galvanic cell, cell representation, EMF of cell - Numerical problems. Types of electrodes, reference electrodes - Primary reference electrode - Standard

Hydrogen Electrode (SHE), Secondary reference electrode - Calomel electrode. Construction, working and determination of pH of unknown solution using SHE and Calomel electrode.

Corrosion: Introduction- Definition, causes and effects of corrosion – Theories of corrosion, chemical and electrochemical theories of corrosion, Types of corrosion: galvanic, water-line and pitting corrosion. Factors affecting rate of corrosion - Nature of the metal, Nature of the corroding environment. Corrosion control methods - Cathodic protection Methods - Sacrificial anode and impressed current methods

UNIT-III:

Energy sources:

Batteries: Introduction – Classification of batteries - Primary, secondary and reserve batteries with examples. Construction, working and applications of Zn-air and Lithium ion battery. Fuel Cells – Differences between a battery and a fuel cell, Construction and applications of Direct Methanol Fuel Cell (DMFC)

Fuels: Introduction and characteristics of a good fuel, Calorific value – Units - HCV, LCV- Dulong's formula - Numerical problems.

Fossil fuels: Introduction, Classification, Petroleum - Refining of Crude oil, Cracking - Types of cracking - Moving bed catalytic cracking. LPG and CNG composition and uses.

Synthetic Fuels: Fischer-Tropsch process, Introduction and applications of Hythane and Green Hydrogen

UNIT-IV:

Polymers:

Definition - Classification of polymers: Based on origin and tacticity with examples – Types of polymerization - Addition (free radical addition mechanism) and condensation polymerization. Plastics, Elastomers and Fibers: Definition and applications (PVC, Buna-S, Nylon-6,6). Differences between thermoplastics and thermo setting plastics, Fiber reinforced plastics (FRP).

Conducting polymers: Definition and Classification with examples - Mechanism of conduction in trans poly-acetylene and applications of conducting polymers.

Biodegradable Polymers: Polylactic acid and its applications.

UNIT-V:

Advanced Materials:

Smart materials: Introduction, Classification with examples - Shape Memory Alloys – Nitinol.

Biosensor - Definition, Amperometric Glucose monitor sensor.

Cement: Portland cement, its composition, setting and hardening.

Phase rule: Definition – Phase, component, degrees of freedom. Phase rule equation. Phase diagrams - One component system - water. Two component system - Lead silver system.

Lubricants: Definition and characteristics of a good lubricant – thin film mechanism of lubrication, properties of lubricants - viscosity, cloud and pour point, flash and fire point

TEXT BOOKS:

1. Engineering Chemistry by P.C. Jain and M. Jain, Dhanpatrai Publishing Company, 2010
2. Engineering Chemistry by Rama Devi, Dr. P. Aparna and Rath, Cengage learning, 2025

REFERENCE BOOKS:

3. Engineering Chemistry by Shikha Agarwal, Cambridge University Press, Delhi 2015
4. Engineering Analysis of Smart Material Systems by Donald J. Leo, Wiley, 2007
5. Challenges and Opportunities in Green Hydrogen by Editors: Paramvir Singh, Avinash Kumar Agarwal, Anupma Thakur, R.K Sinha
6. E-Content- <https://doi.org/10.1142/13094> | October 2023

ENGLISH FOR SKILL ENHANCEMENT

B Tech I Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EN103	Humanities & Social Sciences	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100

COURSE OBJECTIVES:

This course will enable the students to:

1. Improve their vocabulary
2. Use appropriate sentence structures in their oral and written communication
3. Develop their reading and study skills
4. Equip students to write paragraphs, essays, précis and draft letters
5. Acquire skills for technical report writing

COURSE OUTCOME:

Students will be able to:

1. Comprehend texts and produce precise formal writing using effective reading strategies and structured language
2. Apply language skills to produce coherent texts on digital transformation using effective structure and organization
3. Comprehend poetic themes of gratitude and attitude, and apply language skills for effective personal and professional communication
4. Comprehend entrepreneurial ideas and apply language skills to produce concise, context- driven communication
5. Apply language and reading skills to understand professional ethics and produce structured technical reports

UNIT-I:

Theme: Perspectives

Lesson on 'The Generation Gap' by Benjamin M. Spock from the prescribed textbook titled English for the Young in the Digital World published by Orient Black Swan Pvt. Ltd.

Vocabulary:

The Concept of Word Formation -The Use of Prefixes and Suffixes - Words Often Misspelt - Synonyms and Antonyms

Grammar:

Identifying Common Errors in Writing with Reference to Parts of Speech particularly Articles and Prepositions – Degrees of Comparison

Reading:

Reading and Its Importance- Sub Skills of Reading – Skimming and Scanning.

Writing:

Sentence Structures and Types -Use of Phrases and Clauses in Sentences

Importance of Proper Punctuation- Techniques for Writing Precisely –Nature and Style of Formal Writing

UNIT-II:

Theme: Digital Transformation

Lesson on 'Emerging Technologies' from the prescribed textbook titled English for the Young in the Digital World published by Orient BlackSwan Pvt. Ltd.

Vocabulary: Homophones, Homonyms and Homographs

Grammar: Identifying Common Errors in Writing with Reference to Noun-pronoun Agreement and Subject-verb Agreement.

Reading: Reading Strategies-Guessing Meaning from Context – Identifying Main Ideas – Exercises for Practice

Writing: Paragraph Writing – Types, Structures and Features of a Paragraph - Creating Coherence – Linkers and Connectives - Organizing Principles in a Paragraph – Defining- Describing People, Objects, Places and Events – Classifying- Providing Examples or Evidence - Essay Writing - Writing Introduction and Conclusion

UNIT-III:

Theme: Attitude and Gratitude

Poems on 'Leisure' by William Henry Davies and 'The Road Not Taken' by Robert Frost from the prescribed textbook titled English for the Young in the Digital World published by Orient Black Swan Pvt. Ltd.

Vocabulary: Words Often Confused - Words from Foreign Languages and their Use in English.

Grammar: Identifying Common Errors in Writing with Reference to Misplaced Modifiers and Tenses.

Reading: Sub-Skills of Reading – Identifying Topic Sentence and Providing Supporting Ideas - Exercises for Practice.

Writing: Format of a Formal Letter-Writing Formal Letters E.g., Letter of Complaint, Letter of Requisition, Job Application with CV/Resume –Difference between Writing a Letter and an Email - Email Etiquette

UNIT-IV:

Theme: Entrepreneurship

Lesson on 'Why a Start-Up Needs to Find its Customers First' by Pranav Jain from the prescribed textbook titled English for the Young in the Digital World published by Orient Black Swan Pvt. Ltd.

Vocabulary: Standard Abbreviations in English – Inferring Meanings of Words through Context – Phrasal Verbs – Idioms.

Grammar: Redundancies and Clichés in Written Communication – Converting Passive to Active Voice and Vice-Versa.

Reading: Prompt Engineering Techniques– Comprehending and Generating Appropriate Prompts - Exercises for Practice

Writing: Writing Practices- Note Making-Précis Writing

UNIT-V:

Theme: Integrity and Professionalism

Lesson on 'Professional Ethics' from the prescribed textbook titled English for the Young in the Digital World published by Orient BlackSwan Pvt. Ltd.

Vocabulary: Technical Vocabulary and their Usage– One Word Substitutes – Collocations.

Grammar: Direct and Indirect Speech - Common Errors in English (Covering all the other aspects of grammar which were not covered in the previous units)

Reading: Survey, Question, Read, Recite and Review (SQ3R Method) – Inferring the Meaning and Evaluating a Text- Exercises for Practice

Writing: Report Writing - Technical Reports- Introduction – Characteristics of a Report – Categories of Reports Formats- Structure of Reports (Manuscript Format) -Types of Reports - Writing a Technical Report

TEXT BOOKS:

1. Board of Editors. 2025. English for the Young in the Digital World. Orient Black Swan Pvt. Ltd

INTRODUCTION TO ELECTRICAL ENGINEERING

B Tech I Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EE104	Engineering Sciences	L	T	P	2	CIE	SEE	TOTAL
		2	0	0		40	60	100
Prerequisite: Mathematics								

COURSE OBJECTIVES:

1. To understand DC and Single & Three phase AC circuits
2. To study and understand the different types of DC, AC machines and Transformers
3. To import the knowledge of various electrical installations and the concept of power, power factor and its improvement

COURSE OUTCOME:

1. Understand and analyze basic electrical circuits using fundamental laws (KVL, KCL) and network theorems (Thevenin, Norton, Superposition) for both DC and first-order transient circuits
2. Apply phasor techniques to analyze single-phase and three-phase AC circuits, calculate power, and determine resonance conditions in RLC networks
3. Explain the working principle, equivalent circuit, and performance parameters (efficiency and regulation) of transformers and compare with autotransformers
4. Describe the construction, operation, and characteristics of electrical machines including DC shunt and series machines, three-phase induction motors, and synchronous generators
5. Identify components of electrical installations such as switchgear, cables, earthing, and batteries, and perform basic calculations related to energy consumption, power factor improvement, and battery backup

UNIT-I:

D.C. Circuits: Introduction to R, L and C elements, independent voltage and current sources, KVL & KCL, analysis of simple circuits with dc excitation. Superposition, Thevenin and Norton Theorems. Time-domain analysis of first-order RL and RC circuits

UNIT-II:

A.C. Circuits: Introduction to sinusoidal waveforms, phasor representation, the concept of power and power factor, Analysis of 1-phase RLC series and parallel circuits, resonance in series R-L-C circuit. Three-phase balanced circuits, voltage and current relations in star and delta connections

UNIT-III:

Transformers: Ideal and Practical transformer, Principle of operation, equivalent circuit, OC and SC tests, losses, regulation and efficiency. Introduction to Auto-transformer

UNIT-IV:

Electrical Machines: Principle of operation of DC machine, Types of DC machine, NR25 Regulations

performance characteristics of dc shunt and series machines, Construction, principle of operation of a 3-phase induction motor, torque-slip characteristics. Construction, principle of operation of synchronous generator.

UNIT-V:

Electrical Installations: Components of LT Switchgear: Introduction of circuit breakers- design and operation, Types of Wires and Cables, Earthing. Types of Batteries, and Characteristics. Elementary calculations for energy consumption, power factor improvement and battery backup.

TEXT BOOKS:

1. D.P. Kothari and I. J. Nagrath, "Basic Electrical Engineering", Tata McGraw Hill, 4th Edition, 2019
2. MS Naidu and S Kamakshaiah, "Basic Electrical Engineering", Tata McGraw Hill, 2nd Edition, 2008

REFERENCE BOOKS:

1. P. Ramana, M. Suryakalavathi, G.T. Chandrasheker, "Basic Electrical Engineering", S. Chand, 2nd Edition, 2019

PROGRAMMING FOR PROBLEM SOLVING

B Tech I Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25CS105	Engineering Sciences	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100
Prerequisite: Fundamentals of Computers								

COURSE OBJECTIVES:

1. To develop problem-solving skills using algorithms and flowcharts.
2. To introduce the fundamentals of C programming constructs such as variables, operators, data types, control structures and I/O.
3. To strengthen programming skills through modular programming using functions, recursion and arrays and strings.
4. To provide knowledge of advanced C concepts including pointers, structures, unions and Dynamic memory allocation.
5. To understand file concepts and enable students to apply operations on files.

COURSE OUTCOME:

The student will learn

1. To analyze problem-solving techniques to design algorithms and translate them into C Programs.
2. To demonstrate proficiency in using control structures, arrays, functions and recursion to solve computational problems.
3. To implement pointers, structure, and dynamic memory allocation for efficient program development.
4. To perform file operations and manipulations using C programming.
5. To analyze, debug, and optimize C programs to provide correct and efficient solution.

UNIT-I:

Problem solving Concepts and Overview of C

Problem solving Concepts: Representation of an Algorithm and Flowchart with an example problems.

Overview of C: C Language Elements, Variable Declarations and Data Types, Executable statements, General Form of a C Program, Operators: Types, Precedence and Associativity, Arithmetic expressions, Formatting Numbers in Program Output.

Conditional, Looping and Control Statements: Conditional statements (if, if-else, else-if ladder, nested, switch), Looping (for, while, do-while) and nested loops.

UNIT-II:

Arrays and Strings

Arrays: Introduction, types of arrays, creating, accessing and manipulating elements of an array, searching and sorting of an array.

String: String Basics, String Library Functions: Assignment and Substrings, Longer Strings: Concatenation and Whole-Line Input, String Comparison.

UNIT-III:

Functions, Recursion and Pointers

Functions: Built-in, User defined functions, categories of function, passing parameter techniques, scope of names and array of functions.

Recursion: The Nature of Recursion, Tracing a Recursive Function, Recursive Mathematical Functions, Recursive Functions with Array and String Parameters.

Pointers: Introduction, pointer arithmetic, pointer with arrays and strings.

UNIT-IV:

Structure, Union and Dynamic memory Allocation

Structure and Union Types: User-Defined Structure Types, Structure Type Data as Input and Output Parameters, Functions with Structured Result Values, Union Types.

Dynamic Memory Allocation: Introduction, malloc, calloc, realloc, free.

UNIT-V:

Files, Searching and Sorting

Files: Introduction, text and binary files, operations and accessing methods.

Searching and Sorting: Basic searching in an array of elements (linear and binary search techniques), Basic algorithms to sort array of elements (Bubble, Insertion and Selection sort algorithms). No need of implementation for Searching and sorting techniques.

TEXT BOOKS:

1. Jeri R. Hanly and Elliot B. Koffman, Problem solving and Program Design in C 7th Edition, Pearson.
2. B.A. Forouzan and R.F. Gilberg C Programming and Data Structures, Cengage Learning, (3rd Edition).

REFERENCE BOOKS:

25CH106	Basic Sciences	L	T	P	1	CIE	SEE	TOTAL
		0	0	2		40	60	100
Pre requisite: The course includes experiments based on fundamental principles of chemistry essential for engineering students, aiming to develop practical skills and reinforce theoretical concepts								

COURSE OBJECTIVES:

Students will

1. Understand and perform experiments based on core chemical principles relevant to engineering applications
2. Learn to estimate the hardness of water to assess its suitability for drinking purposes
3. Acquire the ability to perform acid-base titrations using instrumental methods such as conductometry, potentiometry, and pH metry
4. Gain hands-on experience in synthesizing polymers like Bakelite and Nylon – 6, 6 in the laboratory
5. Learn to determine the unknown concentration of potassium permanganate (KMnO₄) using a calibration curve

COURSE OUTCOME:

1. Perform volumetric, potentiometric, conductometric, and pH-metric titrations to estimate concentrations of ions and acids in various solutions
2. Demonstrate polymer synthesis techniques like preparation of Bakelite and Nylon-6,6 and explain their properties
3. Measure physical properties such as viscosity and surface tension of liquids using viscometer and stalagmometer and analyze molecular interactions
4. Investigate the corrosion rate of mild steel in different conditions and evaluate the effectiveness of corrosion inhibitors
5. Analyze the construction, working, and applications of advanced energy devices and smart materials through virtual labs and simulations

List of Experiments:

1. **Volumetric Analysis:** Estimation of Hardness of water by EDTA Complexometry method
2. **Conductometry:**
 - a) Estimation of the concentration of strong acid by Conductometry.
 - b) Estimation of the concentration of strong and weak acid in an acid mixture by Conductometry
3. **Potentiometry:**
 - a) Estimation of concentration of Fe⁺² ion by Potentiometry using KMnO₄
 - b) Estimation of concentration of strong acid with strong base by Potentiometry using quinhydrone
4. **pH Metry:** Determination of an acid concentration using pH meter

5. **Lubricants:**
 - a) Determination of viscosity of a given liquid using Ostwald's viscometer.
 - b) Estimation of acid value of given liquid
6. **Preparations:**
 - a) Preparation of Bakelite.
 - b) Preparation Nylon – 6, 6
7. **Corrosion:** Determination of rate of corrosion of mild steel in the presence and absence of inhibitor
8. Virtual lab experiments:
 - a) Construction of Fuel cell and it's working.
 - b) Smart materials for Biomedical applications
 - c) Batteries for electrical vehicles.
 - d) Functioning of solar cell and its applications

REFERENCE BOOKS:

1. Lab manual for Engineering chemistry by B. Ramadevi and P. Aparna, S Chand Publications, New Delhi (2022)
2. Vogel's text book of practical organic chemistry 5th edition
3. Inorganic Quantitative analysis by A.I. Vogel, ELBS Publications
4. College Practical Chemistry by V.K. Ahluwalia, Narosa Publications Ltd. New Delhi (2007)

PROGRAMMING FOR PROBLEM SOLVING LAB

B Tech I Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25CS107	Engineering Sciences	L	T	P	1	CIE	SEE	TOTAL
		0	0	2		40	60	100
Prerequisite: Fundamentals of Computers								

[Note: The programs may be executed using any available Open Source/ Freely available IDE
Some of the Tools available are:

CodeLite: <https://codelite.org/> Code::Blocks:

<http://www.codeblocks.org/>

DevCpp : <http://www.bloodshed.net/devcpp.html> Eclipse: <http://www.eclipse.org>

This list is not exhaustive and is NOT in any order of preference]

COURSE OBJECTIVES:

The students will learn the following:

1. To work with an IDE to create, edit, compile, run and debug programs
2. To analyze the various steps in program development.
3. To develop programs to solve basic problems by understanding basic concepts in C like operators, control statements etc.
4. To develop modular, reusable and readable C Programs using the concepts like functions, arrays etc.
5. To write programs using the Dynamic Memory Allocation concept.

COURSE OUTCOME: ;

The candidate is expected to be able to:

1. Formulate the algorithms for simple problems, translate given algorithms to a working and correct program.
2. Correct syntax errors as reported by the compilers, identify and correct logical errors encountered during execution and implement simple numeric problems of a real word using conditional and control structures.
3. Represent and manipulate data with arrays, strings.
4. Design programs in modular fashion through functions and display data using structures.
5. Create, read and write to and from simple text and binary files

Practice Sessions:

- a) Write a C program, which takes two integer operands and one operator from the user, performs the operation and then prints the result. (Consider the operators +, -, *, /, % and use Switch Statement).
- b) Write a program that finds if a given number is a prime number
- c) Write a C program to find the sum of individual digits of a positive integer and test given

number is palindrome.

- d) A Fibonacci sequence is defined as follows: the first and second terms in the sequence are 0 and 1. Subsequent terms are found by adding the preceding two terms in the sequence. Write a C program to generate the first n terms of the sequence.

Arrays and Strings :

- a) Write a C program to find the minimum, maximum and average in an array of integers.
- b) Write a C program that uses functions to perform the following:
 - i. Addition of Two Matrices
 - ii. Multiplication of Two Matrices
- c) Write a C program that uses functions to perform the following operations:
 - i. To insert a sub-string into a given main string from a given position.
 - ii. To delete n Characters from a given position in a given string
- d) Write a C program to determine if the given string is a palindrome or not (Spelled same in both directions with or without a meaning like madam, civic, noon, abcba, etc.)
- e) Write a C program that displays the position of a character ch in the string S or - 1 if S doesn't contain ch.
- f) Write a C program to count the lines, words and characters in a given text.

Functions and Pointers:

- a) Write C programs that use both recursive and non-recursive functions
 - i. To find the factorial of a given integer.
 - ii. To find the GCD (greatest common divisor) of two given integers.
 - iii. To find x^n
- b) Write a program to show how the address stored in a pointer changes when we do P++ and P--
- c) Write a program for reading elements using a pointer into an array and display the values using the array.
- d) Write a program through a pointer variable to sum of n elements from an array.
- e) Write a program for display each character of a string using a pointer.

Structure, Union and Dynamic memory allocation:

- a) Write a C program to store and display student details using following data using structures and unions.
rollno(int),
name(char array) and
marks(float).
- b) Write a C program to store and display three employee details as follows using array of structures
empID(int),
name(char array) and

salary(float).

- c) Write a C program to demonstrate dynamic memory allocation techniques.

Files :

- a) Write a C program to read the contents of a file.
- b) Write a C program which copies one file to another, replacing all lowercase characters with their uppercase equivalents.
- c) Write a C program to merge two files into a third file (i.e., the contents of the first file followed by those of the second are put in the third file)
- d) Write a C program to read name and marks of n number of students and store them in a file.

TEXT BOOKS:

- 1. Jeri R. Hanly and Elliot B.Koffman, Problem solving and Program Design in C 7th Edition, Pearson.
- 2. B.A. Forouzan and R.F. Gilberg C Programming and Data Structures, Cengage Learning, (3rd Edition).

REFERENCE BOOKS:

- 2. E. Balagurusamy, Computer fundamentals and C, 2nd Edition, McGraw-Hill
- 3. Yashavant Kanetkar, Let Us C, 18th Edition, BPB
- 4. R.G. Dromey, How to solve it by Computer, Pearson (16th Impression)
- 5. Programming in C, Stephen G. Kochan, Fourth Edition, Pearson Education
- 6. Herbert Schildt, C: The Complete Reference, Mc Graw Hill, 4th Edition
- 7. Byron Gottfried, Schaum's Outline of Programming with C, McGraw-Hill

ENGLISH LANGUAGE AND COMMUNICATION SKILLS LAB

B Tech I Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EN108	Humanities & Social Sciences	L	T	P	1	CIE	SEE	TOTAL
		0	0	2		40	60	100

COURSE OBJECTIVES:

This course will enable the students to:

LISTENING SKILLS:

1. To enable students develop their active listening skills
2. To equip students with necessary training in listening, so that they can comprehend the speech of people from different linguistic backgrounds

SPEAKING SKILLS:

3. To improve their pronunciation and neutralize accent
4. To enable students express themselves fluently and appropriately
5. To practice speaking in social and professional contexts

COURSE OUTCOME:

Students will be able to:

1. Identify speech sounds and demonstrate basic spoken interaction using formal and informal English in introductory contexts
2. Interpret the speech and infer the intention of the speaker
3. Recognize pronunciation errors, neutralize MTI, and describe objects, people, and events using visual prompts
4. Apply effective listening techniques to extract specific details and develop storytelling skills using creative sequencing
5. Interpret literal and implied meanings in spoken texts and demonstrate non-verbal communication through expressive activities

Exercise – I

CALL Lab:

Instruction: Speech Sounds-Listening Skill - Importance – Purpose - Types- Barriers- Active Listening

Practice: Listening to Distinguish Speech Sounds (Minimal Pairs) - Testing Exercises

ICS Lab:

Diagnostic Test – Activity titled ‘Express Your View’

Instruction: Spoken and Written language - Formal and Informal English - Greetings - Introducing Oneself and Others

Practice: Any Ice-Breaking Activity

Exercise – II

CALL Lab:

Instruction: Listening vs. Hearing - Barriers to Listening

Practice: Listening for General Information - Multiple Choice Questions - Listening Comprehension Exercises (It is essential to identify a suitable passage with exercises for practice.)

ICS Lab:

Instruction: Features of Good Conversation – Strategies for Effective Communication Practice: Role Play Activity - Situational Dialogues –Expressions used in Various Situations – Making Requests and Seeking Permissions – Taking Leave - Telephone Etiquette

Exercise – III

III CALL Lab:

Instruction: Errors in Pronunciation – Tips for Neutralizing Mother Tongue Influence (MTI)

Practice: Differences between British and American Pronunciation –Listening Comprehension Exercises

ICS Lab:

Instruction: Describing Objects, Situations, Places, People and Events

Practice: Picture Description Activity – Looking at a Picture and Describing Objects, Situations, Places, People and Events (A wide range of Materials / Handouts are to be made available in the lab.)

Exercise – IV

CALL Lab:

Instruction: Techniques for Effective Listening

Practice: Listening for Specific Details - Listening - Gap Fill Exercises - Listening Comprehension Exercises (It is essential to identify a suitable passage with exercises for practice.)

ICS Lab:

Instruction: How to Tell a Good Story - Story Star- Sequencing-Creativity Practice: Activity on Telling and Retelling Stories – Collage

Exercise – V

CALL Lab:

Instruction: Identifying the literal and implied meaning

Practice: Listening for Evaluation - Write the Summary – Listening Comprehension Exercises (It is essential to identify a suitable passage with exercises for practice.)

ICS Lab:

Instruction: Understanding Non-Verbal Communication Practice: Silent Speech - Dumb Charades Activity

Post-Assessment Test on 'Express Your View'

ELECTRICAL ENGINEERING LAB

B Tech I Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EE109	Engineering Sciences	L	T	P	1	CIE	SEE	TOTAL
		0	0	2		40	60	100
Prerequisite: Introduction to Basic Electrical Engineering								

COURSE OBJECTIVES:

1. To measure the electrical parameters for different types of DC and AC circuits using conventional and theorems approach
2. To study the transient response of various R, L and C circuits using different excitations
3. To determine the performance of different types of DC, AC machines and Transformers

COURSE OUTCOME:

After learning the contents of this paper the student must be able:

1. Understand and verify the basic laws of electrical circuits (KVL and KCL)
2. Analyze and validate Thevenin's and Norton's Theorems in linear electrical circuits
3. Analyze the transient responses of R, L and C circuits for different input conditions
4. Calculate and verify impedance and current in RLC series and parallel AC circuits
5. Evaluate the performance calculations of Electrical Machines and Transformers through various testing methods

List of experiments/demonstrations:

PART- A (compulsory)

1. Verification of KVL and KCL
2. Verification of Thevenin's and Norton's theorem
3. Transient Response of Series RL and RC circuits for DC excitation
4. Resonance in series RLC circuit
5. Calculations and Verification of Impedance and Current of RLC series and Parallel AC circuits
6. Measurement of Voltage, Current and Real Power in primary and Secondary Circuits of a Single-Phase Transformer
7. Performance Characteristics of a DC Shunt Motor
8. Torque-Speed Characteristics of a Three-phase Induction Motor

PART-B (any two experiments from the given list)

1. Verification of Superposition theorem
2. Load Test on Single Phase Transformer (Calculate Efficiency and Regulation)
3. Measurement of Active and Reactive Power in a balanced Three-phase circuit
4. No-Load Characteristics of a Three-phase Alternator

TEXT BOOKS:

1. D.P. Kothari and I. J. Nagrath, "Basic Electrical Engineering", Tata McGraw Hill, 4th Edition, 2019
2. MS Naidu and S Kamakshaiah, "Basic Electrical Engineering", Tata McGraw Hill, 2nd Edition, 2008

REFERENCE BOOKS:

1. P. Ramana, M. Suryakalavathi, G.T. Chandrasheker," Basic Electrical Engineering", S. Chand, 2nd Edition, 2019

3. M. S. Sukhija, T. K. Nagsarkar, "Basic Electrical and Electronics Engineering", Oxford, 1 st Edition, 2012
4. Abhijit Chakrabarthy, Sudipta Debnath, Chandan Kumar Chanda, "Basic Electrical Engineering", 2nd Edition, McGraw Hill, 2021
5. L. S. Bobrow, "Fundamentals of Electrical Engineering", Oxford University Press, 2011
6. E. Hughes, "Electrical and Electronics Technology", Pearson, 2010
7. V. D. Toro, "Electrical Engineering Fundamentals", Prentice Hall India, 1989

ENGINEERING WORKSHOP

B Tech I Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25ME110	Engineering Sciences	L	T	P	1	CIE	SEE	TOTAL
		0	0	2		40	60	100
Prerequisite: Practical Skill								

COURSE OBJECTIVES:

1. To introduce students to basic manufacturing processes and workshop practices
2. To provide hands-on training in carpentry, fitting, welding, sheet metal, and machining
3. To develop skills in using hand tools and measuring instruments
4. To enhance safety awareness and proper handling of workshop equipment
5. To build a foundational understanding of industrial production and fabrication

COURSE OUTCOME:

At the end of the course, the student will be able to:

1. Understand the basic manufacturing processes and operations.
2. Use hand tools and equipment safely and efficiently
3. Perform basic operations in carpentry, fitting, welding, sheet metal work, and machining
4. Read and interpret workshop drawings
5. Develop teamwork, time management, and quality awareness in a workshop environment

1. TRADES FOR EXERCISES:

At least two exercises from each trade:

1. Carpentry: T- Lap Joint, Dovetail Joint, Mortise and Tenon Joint
2. Fitting: V- Fit, Dovetail Fit, Semi- circular fit and L-fit
3. Tin Smithy: Square Tin, Rectangular Tray and Conical Funnel
4. Foundry: Preparation of Green Sand Mould using Single Piece and Split Pattern
5. Welding Practice: Arc Welding and Gas Welding
6. House wiring: Parallel and Series, Two-way Switch and Tube Light

2. TRADES FOR DEMONSTRATION AND EXPOSURE

Plumbing, Machine Shop, Metal Cutting, Power tools in construction and Wood Working

TEXT BOOKS:

1. Workshop Practice, B. L. Juneja, Cengage Learning India, 1st edition, 2015
2. Workshop Practice Manual, K. Venkata Reddy, BS Publication, 6th Edition, Rpt.2025

REFERENCE BOOKS:

1. Workshop Manual, K. Venugopal, Anuradha Publications, 2012 edition, 2012

ORDINARY DIFFERENTIAL EQUATIONS AND VECTOR CALCULUS

B Tech I Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25MA201	Basic Sciences	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100
Prerequisite: Mathematical Knowledge at pre-university level								

COURSE OBJECTIVES:

To learn

1. To skills in solving first-order ODEs using methods such as separation of variables, integrating factor, exact equations, and linear equations
2. The formulation and solution techniques of higher-order linear differential equations with constant coefficients
3. Solving ordinary differential equations using Laplace transforms techniques
4. The skills in applying gradient, divergence, curl, and directional derivatives in engineering problems
5. The important theorems like Green's, Gauss's, and Stokes' theorems and their applications

COURSE OUTCOME:

Student will be able to

1. Solve first-order differential equations including exact, linear, and Bernoulli types, and apply them to model physical phenomena such as cooling and growth processes
2. Solve higher-order linear differential equations with constant coefficients and apply the method of variation of parameters to handle non-homogeneous terms
3. Apply Laplace transform techniques to solve initial value problems and evaluate integrals using standard methods
4. Differentiate vector functions and compute gradient, divergence, curl, and directional derivatives
5. Evaluate line, surface, and volume integrals and apply Green's, Gauss's, and Stokes' theorems to solve problems in vector calculus

UNIT-I:

First Order Ordinary Differential Equations

Exact differential equations – Equations reducible to exact differential equations – linear and Bernoulli's equations – Orthogonal Trajectories (only in Cartesian Coordinates). Applications: Newton's law of cooling – Law of natural growth and decay

UNIT-II:

Ordinary Differential Equations of Higher Order

Higher order linear differential equations with constant coefficients: Non-Homogeneous terms of the type $\sin$, $\cos$ polynomials in x , 0 , 0 Method of variation of parameters

UNIT-III:

Laplace Transforms

Laplace Transforms: Laplace Transform of standard functions – First shifting theorem – Laplace transforms of functions multiplied by 't' and divided by 't' – Laplace transforms of derivatives and integrals of function – Evaluation of integrals by Laplace transforms – Laplace transform of periodic functions – Inverse Laplace transform by different methods, convolution theorem (without proof).

Applications: solving Initial value problems by Laplace Transform method

UNIT-IV:

Vector Differentiation

Vector point functions and scalar point functions – Gradient – Divergence and Curl – Directional derivatives – Vector Identities – Scalar potential functions – Solenoidal and Irrotational vectors

UNIT-V:

Vector Integration

Line, Surface and Volume Integrals. Theorems of Green, Gauss and Stokes (without proofs) and their applications

TEXT BOOKS:

1. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 36th Edition, 2010
2. R.K. Jain and S.R.K. Iyengar, Advanced Engineering Mathematics, Narosa Publications, 5th Edition, 2016

REFERENCE BOOKS:

1. Erwin Kreyszig, Advanced Engineering Mathematics, 9th Edition, John Wiley & Sons, 2006
2. G.B. Thomas and R.L. Finney, Calculus and Analytic geometry, 9th Edition, Pearson, Reprint, 2002
3. N.P. Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2008
4. H. K. Dass and Er. Rajnis

ADVANCED ENGINEERING PHYSICS

B Tech I Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25PH202	Basic Sciences	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100
Prerequisite: 10+2 Physics								

COURSE OBJECTIVES:

1. To study crystal structures, defects, and material characterization techniques like XRD and SEM
2. To understand fundamental concepts of quantum mechanics and their applications in solids
3. To introduce quantum computing principles, quantum gates, and basic quantum algorithms
4. To learn the properties and applications of magnetic and dielectric materials
5. To explore the working and applications of lasers and fibre optics in modern technology

COURSE OUTCOME:

1. Analyze crystal structures, identify defects, and apply different technique for material characterization
2. Apply quantum mechanical principles to explain particle behaviour in infinite potential well
3. Analyze the behavior of Qubits using Bloch's sphere representation, explore quantum gates and measurements, and evaluate quantum algorithms such as Deutsch-Jozsa, Shor, and Grover
4. Classify magnetic and dielectric materials and evaluate their applications in emerging technologies
5. Analyze the construction and working of various types of LASERs and optical fibres, and evaluate their applications in modern technologies

UNIT-I:

Crystallography & Materials Characterization

Introduction: Unit Cell, Space Lattice, Basis, Lattice Parameters, Crystal Structures, Bravais Lattices, Packing Factor: SC, BCC, FCC; Miller Indices, Inter-Planar Distance.

Defects In Crystals (Qualitative): Point Defects, Line Defects, Surface Defects and Volume Defects. X-Ray Diffraction: Bragg's Law, Powder Method, Calculation of Average Crystallite Size Using Debye Scherrer's Formula.

Concept of Nanomaterials: surface to volume ratio, scanning electron microscopy (SEM): block diagram, working principle

UNIT-II:

Quantum Mechanics

Quantum Mechanics: Introduction, de-Broglie Hypothesis, Heisenberg Uncertainty Principle, postulates of quantum mechanics: operators in quantum mechanics, eigen values and eigen functions, expectation value;

Schrödinger's Time Independent Wave Equation, Physical Significance Of Wave Function, Particle in a 1-d Box, Bloch's theorem (qualitative), Kronig-Penney model (qualitative): E-k diagram, effective mass of electron, formation of energy bands, origin of bandgap, classification of solids, concept of discrete energy levels and quantum confinement in nanomaterials

UNIT-III:

Quantum Computing

Introduction, Linear Algebra for Quantum Computation, Dirac's Bra and Ket Notation and their Properties, Hilbert Space, Bloch's Sphere, Concept of Quantum Computer, Classical Bits, Qubits, Multiple Qubit System, Quantum Computing System for Information Processing, Evolution of Quantum Systems, Quantum Measurements, Entanglement, Quantum Gates, Challenges and Advantages of Quantum Computing over Classical Computation, Quantum Algorithms: Deutsch- Jozsa, Shor, Grover

UNIT-IV:

Magnetic and Dielectric Materials

Magnetic Materials: Classification of Magnetic Materials, Weiss Domain Theory of Ferromagnetism, Hysteresis, Soft and Hard Magnetic Materials, Synthesis of Ferrimagnetic Materials Using Sol-Gel Method.

Applications: Magnetic Hyperthermia for Cancer Treatment, Magnets for EV, Giant Magneto Resistance (GMR) device.

Dielectric Materials: Types Of Polarization (Qualitative): Electronics, Ionic & Orientation; Ferroelectric, Piezoelectric, Pyroelectric Materials and their applications: Ferroelectric Random- Access Memory (Fe-Ram), Load Cell and Fire Sensor

UNIT-V:

Laser and Fibre Optics

LASER: Introduction to Laser, Characteristics of Laser, Einstein Coefficients and Their Relations, Meta-Stable State, Population Inversion, Pumping, Lasing Action, Ruby Laser, He-Ne Laser, Semiconductor Diode Laser.

Applications: Bar Code Scanner, Lidar for Autonomous Vehicle.

Fibre Optics: Introduction to Fibre Optics, Total Internal Reflection, Construction of Optical Fibre, Acceptance Angle, Numerical Aperture, Classification of Optical Fibres, Losses in Optical Fibre.

Applications: Optical Fibre for Communication System, Sensor for Structural Health Monitoring

TEXT BOOKS:

1. Walter Borchardt-Ott, Crystallography: An Introduction, Springer
2. Charles Kittel, Introduction to Solid State Physics, John Wiley & Sons, Inc
3. Thomas G. Wong, Introduction to Classical and Quantum Computing, Rooted Grove
4. Modern Engineering Physics by Dr. K. Vijay Kumar, Dr. Chandralingam, S.Chand Publications

REFERENCE BOOKS:

1. Jozef Gruska, Quantum Computing, McGraw Hill
2. Michael A. Nielsen & Isaac L. Chuang, Quantum Computation and Quantum Information,

Cambridge University Press

ENGINEERING DRAWING AND COMPUTER AIDED DRAFTING

B Tech I Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25ME203	Engineering sciences	L	T	P	3	CIE	SEE	TOTAL
		2	0	2		40	60	100

COURSE OBJECTIVES:

1. To introduce the fundamentals of engineering drawing and projection systems
2. To develop skills in constructing orthographic, isometric, and sectional views
3. To train students in interpreting and creating technical drawings using CAD tools
4. To familiarize students with dimensioning standards and drafting conventions
5. To bridge manual drafting techniques with computer-aided drafting practices

COURSE OUTCOME:

At the end of the course, the student will be able to:

1. Explain the fundamentals of engineering graphics and construct basic geometrical figures, scales, and curves using conventional drafting methods
2. Apply the principles of orthographic projection to draw projections of points, lines, and planes using
3. Construct projections and sectional views of regular solids and analyze their spatial orientations with auxiliary planes using CAD techniques
4. Develop lateral surfaces of prisms, cylinders, pyramids, and cones using standard engineering drawing using both manual and CAD tools
5. Generate isometric projections and convert between isometric and orthographic views of simple and compound solids using conventional and computer-aided methods

UNIT-I:

Introduction to Engineering Graphics (Conventional)

Principles of Engineering Graphics and their Significance, Geometrical Constructions, Scales, Plain and Diagonal, Conic Sections including the Rectangular Hyperbola, General method only. Cycloid, Epicycloid and Hypocycloid

UNIT-II:

Orthographic Projections (Conventional)

Principles of Orthographic Projections, Conventions, Projections of Points and Lines, Projections of Plane regular geometric figures. Auxiliary Planes. Computer aided orthographic projections, points, lines and planes. Introduction to Computer aided drafting, views, commands and conics

UNIT-III:

Projections of Regular Solids (Conventional and Computer Aided)

Auxiliary Views, Sections, Prism, Cylinder, Pyramid, Cone, Computer aided projections of solids, sectional views

UNIT-IV:

Development of Surfaces (Conventional and Computer Aided)

Prism, Cylinder, Pyramid and Cone

UNIT-V:

Isometric Projections (Conventional and Computer Aided)

Principles of Isometric Projection, Isometric Scale, Isometric Views, Conventions, Isometric Views of Lines, Plane Figures, Simple and Compound Solids, Isometric Projection of objects having non, isometric lines. Isometric Projection of Spherical Parts. Conversion of Isometric Views to Orthographic Views and Vice- versa, Conventions. Conversion of orthographic projection into isometric view

Note:

1. The End Semester Examination will be in conventional mode.
2. CIE – I will be in conventional mode.
3. CIE – II will be using Computer

TEXT BOOKS:

1. Engineering Drawing, N. D. Bhatt, Charotar, 54th Edition, 2023
2. Engineering Drawing and graphics Using AutoCAD, T. Jeyapoovan and Vikas, S. Chand and company Ltd., 3rd Edition, 2010

REFERENCE BOOKS:

2. Engineering Graphics and Design, WILEY, John Wiley and Sons Inc, 3rd Edition, 2020
3. Engineering Drawing, M. B. Shah and B.C. Rane, Pearson, 2nd Edition, 2009
4. Engineering Drawing, N. S. Parthasarathy and Vela Murali, Oxford, 1st Edition, 2015
5. Computer Aided Engineering Drawing, K. Balaveera Reddy, CBS Publishers, 2nd Edition, 2015

PYTHON PROGRAMMING

B Tech I Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25CS204	Engineering Sciences	L	T	P	2	CIE	SEE	TOTAL
		2	0	0		40	60	100
Prerequisite: Basic knowledge of computer fundamentals, C programming								

COURSE OBJECTIVES:

Introduce the fundamentals of Python programming for problem-solving

1. Develop skills to write structured, modular, and efficient Python code
2. Enable students to use Python's built-in data structures and libraries effectively
3. Provide knowledge on file handling, exception handling, and object-oriented programming in Python
4. Equip students with the ability to apply Python for real-world applications including data processing and automation

COURSE OUTCOME:

1. Apply Python syntax, operators, and control structures to develop efficient solutions for arithmetic, conditional, and iterative tasks.
2. Analyze and manipulate strings, lists, tuples, sets, and dictionaries to perform effective data handling and processing.
3. Implement modular programming by defining functions, using recursion, and integrating standard/user-defined modules to build reusable solutions.
4. Evaluate and construct programs that perform file operations and manage exceptions to ensure robust and error-free execution.
5. Design classes, objects, and GUI-based applications using OOP principles such as inheritance, encapsulation, and polymorphism.

UNIT-I:

Introduction to Python and Basics of Programming

Introduction to Python: Features, Applications, Installation, IDEs, Python Syntax, Indentation, Comments, Variables, Data Types, Type Casting, Operators: Arithmetic, Relational, Logical, Assignment, Membership, Identity, Bitwise, Input/Output functions (input(), print()), Control Structures: if, if-else, if-elif-else, Nested Conditions, Looping: for, while, Nested Loops, break, continue, pass

UNIT-II:

Data Structures in Python

Strings: Creation, Indexing, Slicing, Methods, String Formatting, Lists: Creation, Indexing, Slicing, List Comprehension, Methods, Tuples: Properties, Indexing, Methods, Sets: Creation, Operations, Methods, Dictionaries: Creation, Access, Methods, Dictionary Comprehension, Iterating over data structures

UNIT-III:

Functions and Modules

Functions: Defining, Calling, Parameters, Return Values, Types of Arguments: Positional, Keyword, Default, Variable Length, Scope of Variables: Local and Global, Lambda Functions, Map, Filter, Reduce, Recursion in Python, Modules: Importing, Creating User-defined Modules, Standard Modules (math, random, datetime), Packages in Python

UNIT-IV:

File Handling and Exception Handling

File Handling: Opening, Reading, Writing, Appending, File Modes, File Methods, Working with CSV and JSON Files, Exception Handling: try, except, else, finally, Built-in Exceptions, Raising Exceptions, Introduction to Regular Expressions (re module)

UNIT-V:

Object-Oriented Programming and Applications

OOP Basics: Classes, Objects, Attributes, Methods, Constructor (`__init__`), `self` keyword, Inheritance: Single, Multiple, Multilevel, Hierarchical, Method Overriding, Method Overloading (conceptual), Encapsulation and Polymorphism, Application Development: Data Processing Script, Basic Calculator, File Organizer, Simple Data Analysis with pandas

TEXT BOOKS:

1. Python Programming: Using Problem Solving Approach by Reema Thareja
2. Python Crash Course by Eric Matthes, Learning Python by Mark Lutz

REFERENCE BOOKS:

1. Introduction to Python Programming by Gowrishankar S., Veena A
2. Python Cookbook by David Beazley and Brian K. Jones
3. Fluent Python by Luciano Ramalho, Automate the Boring Stuff with Python by Al Sweigart

DATA STRUCTURES

B Tech I Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25CS205	Engineering Sciences	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100
Prerequisite: A course on “Programming for Problem Solving”								

COURSE OBJECTIVES:

1. Exploring basic data structures such as stacks and queues
2. Introduces a variety of data structures such as hash tables, search trees, tries, heaps, graphs
3. Introduces sorting and pattern matching algorithms

COURSE OUTCOME:

After successful completion of the course, the student will be able to:

1. Analyze and implement the operations on linear data structures such as Stack and Queue using arrays
2. Design and implement various operations on linked lists (singly, doubly, and circular)
3. Interpret and apply operations on non-linear data structures such as Binary Trees, BST, AVL Trees, and Red-Black Trees
4. Explain the principles of Multi-way Search Trees (B-Trees, B+ Trees) and implement efficient sorting algorithms (Quick Sort, Merge Sort, Heap Sort)
5. Summarize and apply graph operations, implement graph traversal techniques (BFS, DFS), and interpret different hashing techniques for efficient searching and storage

UNIT-I:

Introduction to Data Structures: Basic Terminology, Classification of Data Structures, Operations on Data Structures, Abstract Data Types

Stacks: Stack – Operations: Push, Pop, Peek, Display. Representation and implementation of Stack operations using arrays, Applications of Stacks - Recursion, Infix to Postfix transformation, Evaluating postfix expressions.

Queues: Queue –Operations: enqueue, dequeue, display, representation and implementation of Queue operations using arrays, Applications of Queues, Circular Queues - Representation and implementation of Circular Queues

UNIT-II:

Linked Lists: Singly Linked Lists: Operations -insertion, deletion, search, display. Doubly Linked Lists: Operations insertion, deletion, search, display. Circular Linked Lists: Operations- insertion, deletion, search, display

UNIT-III:

Trees: Basic Tree concepts, Binary Trees: Properties, Types, Representation of Binary Trees using arrays, Traversals of Binary Tree.

Binary Search Trees –BST Operations- Searching, Insertion and Deletion, BST ADT, BST Applications

Balanced Trees- AVL Trees and its operations, Red –Black Trees and its operations, Splay Trees and its operations

UNIT-IV:

Multi way Search Trees: Introduction to B Trees, B+ Trees and their operations. Sorting: Quick Sort, Merge Sort, Radix Sort, Heap sort, Tree Sort, Shell Sort

UNIT-V:

Graphs: Introduction to graphs, Representation of graphs, Graph traversal techniques – Breadth First Search Traversal, Depth First Search Traversal.

Hashing - Hashing and Collision: Introduction, Hash Tables, Hash Functions: Division Method, Multiplication Method, Mid-square Method, Folding Method. Collisions: Collision Resolution by Open Addressing, Collision Resolution by Chaining

TEXT BOOKS:

1. Data Structures: A Pseudocode Approach with C, 2nd Edition, R. F. Gilberg and B.A. Forouzan, Cengage Learning
2. Data Structure using C– Reema Thareja, 3rd Edition, Oxford University Press

REFERENCE BOOKS:

1. Data Structures with C, Seymour Lipschutz, TMH
2. Classic Data Structures, 2/e, Debasis, Samanta, PHI, 2009
3. Fundamentals of Data Structures in C, 2/e, Horowitz, Sahni, Anderson Freed, University Press
4. Data Structures using C – A. Tanenbaum, Y. Langsam, and M.J. Augenstein, PHI/Pearson Education

NETWORK ANALYSIS AND SYNTHESIS

B Tech I Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC206	Engineering Sciences	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100

COURSE OBJECTIVES:

1. To understand the basic concepts on RLC circuits
2. To know the behavior of the steady state and transient states in RLC circuits
3. To understand the two port network parameters
4. Learn the design concepts of various filters and attenuators
5. To develop problem solving skills in Network realization and design

COURSE OUTCOME:

After successful completion of the course, the student will be able to:

1. Gain the knowledge on basic RLC circuits behavior
2. Analyze the Steady state and transient analysis of RLC Circuits
3. Characterization of two port network parameters
4. Analyze the Design aspect of various filters and attenuators
5. Analyze Network functions and synthesize LC, RC, & RL Networks using Foster and Cauer Methods

UNIT-I:

Network Topology: Basic cutset and tie set matrices for planar networks, Magnetic Circuits, Self and Mutual inductances, dot convention, impedance, reactance concept, Impedance transformation and coupled circuits, co-efficient of coupling, equivalent T for Magnetically coupled circuits, Ideal Transformer

UNIT-II:

Transient and Steady state analysis: RC, RL and RLC Circuits, Sinusoidal, Step and Square responses. RC Circuits as integrator and differentiators. 2nd order series and parallel RLC Circuits, Root locus, damping factor, over damped, under damped, critically damped cases, quality factor and bandwidth for series and parallel resonance, resonance curves

UNIT-III:

Two port network parameters: Z, Y, ABCD, h and g parameters, Characteristic impedance, Image transfer constant, image and iterative impedance, network function, driving point and transfer functions – using transformed (S) variables, Poles and Zeros. Standard T, π , L Sections, Characteristic impedance, image transfer constants, Design of Attenuators, impedance matching network

UNIT-IV:

Filters: Classification of Filters, Filter Networks, Constant-K Filters-Low pass, high pass, Band pass, band-stop filters, M-derived Filters- T and π filters- Low pass, high pass

Attenuators: Types – T, π , L, Bridge T and lattice, Asymmetrical Attenuators T, π , L
Equalizers Types- Series, Shunt, Constant resistance, bridge T attenuation, bridge T phase,
Lattice attenuation, lattice Phase equalizers

UNIT-V:

Network Synthesis: Driving point impedance and admittance, transfer impedance and admittance, network functions of Ladder and non ladder networks, Poles, Zeros analysis of network functions, Hurwitz polynomials, Positive Real Functions, synthesis of LC, RC and RL Functions by foster and causer methods

TEXT BOOKS:

1. Van Valkenburg -Network Analysis, 3rd Ed., Pearson, 216
2. JD Ryder - Networks, Lines and Fields, 2nd Ed., PHI, 1999

REFERENCE BOOKS:

1. J. Edminister and M. Nahvi - Electric Circuits, Schaum's Outlines, Mc Graw Hills Education, 1999
2. A. Sudhakar and Shyammohan S Palli - Networks & Circuits, 4th Ed., Tata McGraw- Hill Publications
3. William Hayt and Jack E. Kimmerley - Engineering Circuit Analysis, 6th Ed., William Hayt and Jack E. Kimmerley, McGraw Hill Company

ADVANCED ENGINEERING PHYSICS LAB

B Tech I Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25PH207	Basic Sciences	L	T	P	1	CIE	SEE	TOTAL
		0	0	2		40	60	100

COURSE OBJECTIVES:

1. To provide practical exposure to advanced concepts in solid-state and modern physics
2. To synthesize and study the physical properties of materials like semiconductors, ferromagnetic, and ferroelectric substances
3. To perform semiconductor characterization using Hall effect and band gap experiments
4. To explore the working principles of lasers and optical fibers through hands-on experiments
5. To develop skills in data analysis, interpretation, and scientific reporting

COURSE OUTCOME:

1. Synthesize and analyze nanomaterials such as magnetite (Fe_3O_4) using chemical methods
2. Determine key electrical, magnetic, and optical properties of semiconductors and other functional materials
3. Characterize semiconductors using Hall effect and energy gap measurement techniques
4. Demonstrate working knowledge of laser systems and optical fiber parameters through experimental study
5. Apply scientific methods for accurate data collection, analysis, and technical report writing

List of Experiments:

1. Synthesis of magnetite (Fe_3O_4) powder using sol-gel method
2. Determination of energy gap of a semiconductor
3. Determination of Hall coefficient and carrier concentration of a given semiconductor
4. Determination of magnetic moment of a bar magnet and horizontal earth magnetic field
5. Study of B-H curve of a ferro magnetic material
6. Study of P-E loop of a given ferroelectric crystal
7. Determination of dielectric constant of a given material
8. Determination of Curie's temperature of a given ferroelectric material
9.
 - A) Determination of wavelength of a laser using diffraction grating
 - B) Study of V-I characteristics of a given laser diode
10.
 - A) Determination of numerical aperture of a given optical fibre
 - B) Determination of bending losses of a given optical fibre

Note: Any 8 experiments are to be performed

DATA STRUCTURES LAB

B Tech I Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25CS208	Engineering Sciences	L	T	P	1	CIE	SEE	TOTAL
		0	0	2		40	60	100
Prerequisite: A course on “Programming for Problem Solving”								

COURSE OBJECTIVES:

1. It covers various concepts of C programming language
2. It introduces searching and sorting algorithms
3. It provides an understanding of data structures such as stacks and queues

COURSE OUTCOME:

After successful completion of the course, the student will be able to:

1. Implement stack and queue data structures
2. Interpret various linked list operations to produce executable codes
3. Develop working procedures for operations on BST, AVL Tree, Redblack Tree
4. Develop executable code for sorting techniques
5. Demonstrate graph operations and hashing techniques

List of Experiments:

Week 1

1. Write a C program to implement Stack operations using arrays.
2. Write a C program to implement Queue operations using arrays.
3. Write a C program to implement Circular Queue operations using arrays

Week 2

1. Implement the following operations on Single Linked List using a C program.
i. Create ii. Insert iii. Delete iv. Search v. Display

Week 3

1. Write a C program to implement Double Linked List operations –
i. Create ii. Insert iii. Delete iv. Search v. Display.

Week 4

1. Write a C program to implement Circular Linked List operations –
i. Create ii. Insert iii. Delete iv. Search v. Display.

Week 5

1. Develop a C code for preorder, in-order and post-order traversals using recursion and non- recursion.

Week 6:

1. Implement the following operations on Binary Search Tree
 - i. Create ii. Insert iii. Search iv. Delete v. Display

Week 7:

1. Implement the following operations on AVL Tree
 - i. Create ii. Insert iii. Search iv. Delete v. Display

Week 8:

1. Implement the following operations on Red Black Tree
 - i. Create ii. Insert iii. Search iv. Delete v. Display

Week 9:

- a) Develop a C program for Quick Sort.
- b) Demonstrate Merge Sort using a C program
- c) Design a C program for Radix Sort.

Week 10:

- a) Develop a C program for Tree Sort.
- b) Demonstrate Heap sort using a C program

Week 11:

- a) Implement a C program for DFS traversal on graph.
- b) Implement a C program for BFS traversal on graph

Week 12:

1. Write a program to implement the following Hash Functions:
 - i) Division Method ii) Multiplication Method,
 - iii) Mid-square Method iv) Folding Method

TEXT BOOKS:

1. Fundamentals of Data Structures in C, 2nd Edition, E. Horowitz, S. Sahni and Susan Anderson
2. Freed, Universities Press
3. Data Structures using C – A. S. Tanenbaum, Y. Langsam, and M. J. Augenstein, PHI/Pearson Education

REFERENCE BOOKS:

1. Fundamentals of Data Structures in C, 2/e, Horowitz, Sahni, Anderson Freed, University Press
2. Data Structures, 2/e, Richard F, Gilberg, Forouzan, Cengage
3. Data Structures and Algorithms, 2008, G.A.V.Pai , TMH

PYTHON PROGRAMMING LAB

B Tech I Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25CS209	Engineering Sciences	L	T	P	2	CIE	SEE	TOTAL
		0	0	4		40	60	100

COURSE OBJECTIVES:

1. To install and run the Python interpreter
2. To learn control structures
3. To Understand Lists, Dictionaries in python
4. To Handle Strings and Files in Python

COURSE OUTCOME:

After completion of the course, the student should be able to

1. Develop an efficient code for basic arithmetic, conditionals, and iterative tasks.
2. Gain proficiency in manipulating core data structures for effective data handling and processing.
3. Implement programs into reusable modules, perform file operations, and leverage built-in libraries for efficient coding.
4. Simulate digital logic gates and systems, bridging programming with computational logic concepts.
5. Design classes, objects, and graphical user interfaces to build interactive and visually rich applications.

List of Experiments:

1. I. Use a web browser to go to the Python website <http://python.org>. This page contains information about Python and links to Python-related pages, and it gives you the ability to search the Python documentation.
II. Start the Python interpreter and type `help()` to start the online help utility.
2. Start a Python interpreter and use it as a Calculator
3. Write a program to calculate compound interest when principal, rate and number of periods are given
4. Read the name, address, email and phone number of a person through the keyboard and print the details
5. Print the below triangle using for loop.
5
4 4
3 3 3
2 2 2 2
1 1 1 1 1
6. Write a program to check whether the given input is digit or lowercase character or uppercase character or a special character (use 'if-else-if' ladder)
7. Python program to print all prime numbers in a given interval (use break)
8. Write a program to convert a list and tuple into arrays.

9. Write a program to find common values between two arrays
10. Write a function called `palindrome` that takes a string argument and returns `True` if it is a palindrome and `False` otherwise. Remember that you can use the built-in function `len` to check the length of a string
11. Write a function called `is sorted` that takes a list as a parameter and returns `True` if the list is sorted in ascending order and `False` otherwise
12. Write a function called `has duplicates` that takes a list and returns `True` if there is any element that appears more than once. It should not modify the original list.
13. Write a function called `remove duplicates` that takes a list and returns a new list with only the unique elements from the original. Hint: they don't have to be in the same order
14. The wordlist I provided, `words.txt`, doesn't contain single letter words. So you might want to add "I", "a", and the empty string
15. Write a python code to read dictionary values from the user. Construct a function to invert its content. i.e., keys should be values and values should be keys
16. Add a comma between the characters. If the given word is 'Apple', it should become 'A,p,p,l,e'
17. Remove the given word in all the places in a string?
18. Write a function that takes a sentence as an input parameter and replaces the first letter of every word with the corresponding upper case letter and the rest of the letters in the word by corresponding letters in lower case without using a built-in function?
19. Writes a recursive function that generates all binary strings of n-bit length
20. Write a python program that defines a matrix and prints
21. Write a python program to perform multiplication of two square matrices
22. How do you make a module? Give an example of construction of a module using different geometrical shapes and operations on them as its functions
23. Use the structure of exception handling all general-purpose exceptions
24. Write a function called `draw rectangle` that takes a `Canvas` and a `Rectangle` as arguments and draws a representation of the `Rectangle` on the `Canvas`
25. Add an attribute named `color` to your `Rectangle` objects and modify `draw rectangle` so that it uses the `color` attribute as the fill color.
26. Write a function called `draw point` that takes a `Canvas` and a `Point` as arguments and draws a representation of the `Point` on the `Canvas`
27. Define a new class called `Circle` with appropriate attributes and instantiate a few `Circle` objects. Write a function called `draw circle` that draws circles on the canvas
28. Write a python code to read a phone number and email-id from the user and validate it for correctness
29. Write a Python code to merge two given file contents into a third file
30. Write a Python code to open a given file and construct a function to check for given words present in it and display on found
31. Write a Python code to Read text from a text file, find the word with most number of occurrences
32. Write a function that reads a file `file1` and displays the number of words, number of vowels, blank spaces, lower case letters and uppercase letters
33. Import `numpy`, `Plotpy` and `Scipy` and explore their functionalities

34. Install NumPy package with pip and explore it
35. Write a program to implement Digital Logic Gates – AND, OR, NOT, EX-OR
36. Write a GUI program to create a window wizard having two text labels, two text fields and two buttons as Submit and Reset

TEXT BOOKS:

1. Supercharged Python: Take your code to the next level, Overland
2. Learning Python, Mark Lutz, O'reilly

REFERENCE BOOKS:

PROBABILITY THEORY AND STOCHASTIC PROCESSES

B Tech II Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC301	Professional Core	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100
Prerequisite: Mathematics								

COURSE OBJECTIVES:

1. This gives basic understanding of random variables and operations that can be Performed on them
2. To know the Spectral and temporal characteristics of Random Process.
3. To Learn the Basic concepts of Information theory Noise sources and its representation for understanding its characteristics.
4. To analyse stationary and ergodic random process
5. To evaluate noise parameters

COURSE OUTCOME:

1. Apply mathematical operations to analyze single random variables in communication systems.
2. Apply joint probability concepts to perform operations on multiple random variables
3. Analyse the spectral and temporal characteristics of random signals using appropriate mathematical tools.
4. Evaluate the behaviour of LTI systems driven by stationary random processes using autocorrelation functions (ACFs) and power spectral densities (PSDs).
5. Explain the fundamental concepts of noise and information theory and their relevance in communication systems.

UNIT-I:

Probability: Probability introduced through Sets and Relative Frequency: Experiments and Sample Spaces, Discrete and Continuous Sample Spaces, Events, Probability Definitions and Axioms, Joint Probability, Conditional Probability, Total Probability, Bay's Theorem, Independent Events.

Random Variables- Definition, Conditions for a Function to be a Random Variable, Discrete, Continuous and Mixed Random Variable, Distribution and Density functions, Properties, Binomial, Poisson, Uniform, Gaussian, Exponential, Rayleigh, Methods of defining Conditioning Event, Conditional Distribution, Conditional Density and their Properties.

UNIT-II:

Operations on single Random Variable

Expected Value of a Random Variable, Function of a Random Variable, Moments about the Origin, Central Moments, Variance and Skew, Chebychev's Inequality, Characteristic Function, Moment Generating Function, Transformations of a Random Variable - Monotonic and Non-monotonic Transformations of Continuous and Discrete Random Variable, Computer generation of a Random Variable of a given PDF/CDF.

UNIT-III:

Multiple random variables and Operations on Multiple random variables: Vector Random Variables, Joint Distribution Function and its Properties, Marginal Distribution Functions, Conditional Distribution and Density– Point and Interval conditioning, Statistical Independence, Sum of Two and more Random Variables, Central Limit Theorem, Equal and Unequal Distribution (Proof not expected). Expected Value of a Function of Random Variables- Joint Moments about the Origin, Joint Central Moments, Joint Characteristic Functions, Jointly Gaussian Random Variables: Two Random Variables case, N Random Variable case, Properties, Transformations of Multiple Random Variables, Linear Transformations of Gaussian Random Variables.

UNIT-IV:

Random processes – Temporal characteristics: The Random Process Concept, Classification Of Processes, Deterministic and Nondeterministic Processes, Distribution and Density Functions, concept of Stationarity and Statistical Independence. First-Order Stationary Processes, Second- Order and Wide- Sense Stationarity, (N-Order) and Strict-Sense Stationarity, Time Averages and Ergodicity, Mean- Ergodic Processes, Correlation-Ergodic Processes, Autocorrelation Function and Its Properties, Cross- Correlation Function and Its Properties, Covariance Functions, Gaussian Random Processes, Poisson Random Process. Random Signal Response of Linear Systems: System Response – Convolution, Mean and Mean-squared Value of System Response, autocorrelation Function of Response, Cross-Correlation Functions of Input and Output.

UNIT-V:

Random processes – Spectral characteristics: The Power Spectrum: Properties, Relationship between Power Spectrum and Autocorrelation Function, The Cross-Power Density Spectrum, Properties, Relationship between Cross-Power Spectrum and Cross-Correlation Function. Spectral Characteristics of System Response: Power Density Spectrum of Response, Cross-Power Density Spectrums of Input and Output.

Noise sources: Resistive / Thermal Noise Source, Arbitrary Noise Sources, Effective Noise Temperature, Noise equivalent bandwidth, Average Noise Figures, Average Noise Figure of cascaded networks, Narrow Band noise, Quadrature representation of narrow band noise & its properties.

TEXT BOOKS:

1. Peyton Z. Peebles - Probability, Random Variables & Random Signal Principles - TMH, 4th Edition
2. Murray R Spiegel, John Schiller, R Alu Srinivasan. – Probability and Statistics – Schaum's Outlines, 2nd Edition, TMH

REFERENCE BOOKS:

1. P Ramesh Babu - Probability Theory and Random Processes – McGraw Hill Education

3. K. N. Hari Bhat, K. Anitha Sheela and Jayant Ganguly - Probability Theory and Stochastic Processes for Engineers - Pearson, 1st Edition, 2011
4. Taub and Schilling - Principles of Communication systems by (TMH), 2008

- 5 Y Mallikarjuna Reddy - Probability Theory and Stochastic Processes, 4th Edition,
University Press

SIGNALS AND SYSTEMS

B Tech II Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC302	Professional Core	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100
Prerequisite: Mathematics								

COURSE OBJECTIVES:

This subject gives the basics of Signals and Systems required for all Electrical Engineering related courses. The objectives of this subject are to:

1. Classify signals and systems and their analysis in time and frequency domains.
2. Study the concepts of distortion less transmission through LTI Systems, convolution and correlation properties.
3. Understand Laplace and Z-transforms their properties for analysis of signals and systems.
4. Identify the need for sampling of CT signals, types and merits and demerits of each type.
5. To understand principles of signal sampling

COURSE OUTCOME:

Upon completing this course, the student will be able to:

1. Apply vector-space concepts and orthogonal functions for analyzing and approximating signals and classify different types of signals and systems.
2. Analyze and synthesize signals using Fourier series and Fourier transforms in both time and frequency domains.
3. Determine the time and frequency response of LTI systems, determine system stability and causality and understand distortion-less transmission conditions.
4. Evaluate system behavior using Laplace transform. Use convolution and correlation properties to detect signals from noise.
5. Apply and analyze sampling theorem to discrete-time signal processing and prevent aliasing and extract signals using appropriate filtering techniques. Evaluate system behavior using and Z-transforms.

UNIT-I:

Signal Analysis

Analogy between Vectors and Signals, Orthogonal Signal Space, Signal approximation using Orthogonal functions, Mean Square Error, Closed or complete set of Orthogonal functions, Orthogonality in Complex functions, Classification of Signals and systems, Exponential and Sinusoidal signals, Concepts of Impulse function, Unit Step function, Signum function.

UNIT-II:

Fourier series: Representation of Fourier series, Continuous time periodic signals, Properties of Fourier Series, Dirichlet's conditions, Trigonometric Fourier Series and Exponential Fourier Series, Complex Fourier spectrum.

Fourier Transforms: Deriving Fourier Transform from Fourier series, Fourier Transform of arbitrary signal, Fourier Transform of standard signals, Fourier Transform of Periodic Signals, Properties of Fourier Transform, Fourier Transforms

involving Impulse function and Signum function, Introduction to Hilbert Transform.

UNIT-III:

Signal Transmission through Linear Systems: Linear System, Impulse response, Response of a Linear System, Concept of convolution in Time domain and Frequency domain, Graphical representation of Convolution. Extraction of Signal from Noise by Filtering. Linear Time Invariant (LTI) System, Linear Time Variant (LTV) System, Transfer function of a LTI System, Filter characteristic of Linear System, Distortion less transmission through a system, Signal bandwidth, System Bandwidth, Ideal LPF, HPF, and BPF characteristics, Causality and Paley-Wiener criterion for physical realization, Relationship between Bandwidth and risetime. Extraction of Signal from Noise by Filtering.

UNIT-IV:

Laplace Transforms: Laplace Transforms (L.T), Inverse Laplace Transform, Concept of Region of Convergence (ROC) for Laplace Transforms, Properties of L.T, Relation between L.T and F.T of a signal, Laplace Transform of certain signals using waveform synthesis.

Correlation: Auto Correlation and Cross Correlation Functions, Relation between Convolution and Correlation, Properties of Correlation Functions, Energy Density Spectrum, Power Density Spectrum, Relation between Autocorrelation Function and Energy/Power Spectral Density Function, Parseval's Theorem, Detection of Periodic Signals in the presence of Noise by Correlation.

UNIT-V:

Sampling theorem: Graphical and analytical proof of Sampling Theorem for Base band/Band Limited and Band Pass Signals, Types of Sampling: Impulse Sampling, Natural and Flat top Sampling, Reconstruction of signal from its samples, Effect of under sampling – Aliasing,

Z-Transforms: Concept of Z- Transform of a Discrete Sequence, Distinction between Laplace, Fourier and Z Transforms, Region of Convergence in Z-Transform, Constraints on ROC for various classes of signals, Inverse Z-transform, Properties of Z-transforms.

TEXT BOOKS:

1. Signals, Systems & Communications -B.P. Lathi, BS Publications.
2. Signals and Systems – Allan. V. Oppenheim, Allan. S. Willsky with S. Hamid. Nawab, 2nd Ed. Pearson

REFERENCE BOOKS:

1. Signals and Systems–Simon Haykin, Barry Van Veen, 2nd Ed., Wiley.
2. Signals and Systems – A. Rama Krishna Rao, 2008, TMH.
3. Fundamentals of Signals and Systems – Michel J. Roberts, Govind Sharma, 2nd Ed., MGH
4. Signals, Systems and Transforms - Charles. L. Philips, John M. Parr and Eve A. Riskin, 4th Ed., 2004, Pearson, Prentice Hall.

ELECTRONIC DEVICES AND CIRCUITS

B Tech II Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC303	Professional Core	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100

COURSE OBJECTIVES:

1. This course introduces fundamental semiconductor devices behavior and their characteristics Such as diodes, BJTs, and FETs.
2. This course covers Analysis and design of basic electronic circuits.
3. The course introduces the Understanding of rectifiers design & analysis, voltage regulation techniques, and amplifier circuits.
4. The course explores in-depth study of advanced semiconductor devices such as Fin FETs and CNTFETs, focusing on their unique architectures, electrical characteristics
5. This course focuses on building a solid foundation in analog circuit design while providing a Thorough understanding of modern electronic device technologies

COURSE OUTCOME:

By the end of this course, students will be able to:

1. Analyze the electrical characteristics and models of semiconductor diodes and apply them in rectifier and clipping circuits.
2. Evaluate the operation and configurations of Bipolar Junction Transistors (BJTs) and analyse their input and output characteristics.
3. Design appropriate biasing networks for BJTs and determine the operating point for amplifier applications.
4. Analyze transistor amplifier circuits using h-parameter models and assess performance for various configurations.
5. Analyze the structure, working, and characteristics of JFETs, MOSFETs, and advanced devices like FinFETs and CNTFETs, and compare modern device technologies

UNIT-I:

Diode Characteristics and Applications: PN junction diode – I-V characteristics, Diode resistance and capacitance, Diode models (Ideal, Simplified, Piecewise Linear), Rectifiers – Half-wave, Full- wave (Center-tap and bridge), Capacitor filter for rectifiers, Clippers and clampers, Zener diode – I-V characteristics and voltage regulation.

UNIT-II:

Bipolar Junction Transistor (BJT): Structure and working principle of BJT, Current components and transistor action, Configurations: Common Base (CB), Common Emitter (CE), Common Collector (CC), Input and output characteristics, Determination of h-parameters from transistor characteristics.

UNIT-III:

BJT Biasing: Need for biasing and stabilization, Load line and operating point, Biasing Regulations

techniques: Fixed bias, Collector-to-base bias, Voltage divider bias, Stability factors and thermal runaway.

UNIT-IV:

Transistor Amplifiers: Transistor as a small-signal amplifier, h-parameter equivalent circuit, CE, CB, CC amplifier analysis using h-parameters, Approximate CE model – with and without emitter bypass capacitor.

UNIT-V:

Special Purpose Diodes: Principle of Operation of – SCR, Tunnel Diode, Varactor Diode, Photo Diode, Solar Cell, LED and Schottky Diode

Field Effect Transistors and Advanced Devices: JFET: Structure, operation, and characteristics, MOSFET: Enhancement and Depletion modes – Structure, operation, and characteristics, Advanced Devices: FinFETs - 3D structure, Scaling advantages, CNTFETs - Structure, ballistic transport, fabrication, Comparison: CMOS vs. FinFET vs. CNTFET.

DIGITAL LOGIC DESIGN

B Tech II Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC304	Professional Core	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100

COURSE OBJECTIVES:

1. To understand number systems, binary arithmetic, and error detection/correction codes used in digital systems.
2. To learn the fundamentals of Boolean algebra and apply gate-level minimization techniques for simplifying logic functions.
3. To design and analyze combinational logic circuits such as adders, subtractors, multiplexers, decoders, and comparators.
4. To understand and implement sequential logic circuits including flip-flops, counters, and shift registers.
5. To study synchronous sequential machines (Moore and Mealy models) and programmable logic devices like ROM, PLA, and PAL

COURSE OUTCOME:

Upon completion, students will be able to:

1. Apply Boolean algebra and minimization techniques to simplify Boolean functions.
2. Design combinational circuits using logic gates.
3. Analyze latches and flip-flops to design sequential logic circuits.
4. Construct synchronous sequential circuits combining flip-flops and logic gates.
5. Utilize programmable logic devices in digital system design.

UNIT-I:

Number Systems: Binary, Octal, Decimal, Hexadecimal, Fixed-point and Floating-point Number Representations, Complements of Numbers: 1's and 2's Complement, Error Detection and Correction Codes: Parity Check, Hamming Code.

Boolean Algebra and Logic Gates: Axiomatic definitions, basic theorems and properties, Boolean Functions: Canonical and standard forms, Digital Logic Gates Overview

UNIT-II:

Gate-Level Minimization Techniques: Karnaugh maps: 2, 3, and 4 variables, Sum-of-products (SOP) and product-of-sums (POS) simplification, Don't care conditions, Implementation using NAND and NOR gates

UNIT-III:

Combinational Logic Circuits: Analysis and design procedures, Binary adder-subtractor and BCD adder, magnitude comparator, decoders, encoders, multiplexers and demultiplexers

UNIT-IV:

Sequential Logic Circuits: Gated latches, Flip-flops: Clocked S-R, D, T, JK, Master-Slave JK, Design of synchronous and asynchronous counters, Shift registers: types and applications.

UNIT-V:

Synchronous Sequential Logic Moore and Mealy state machines, State diagrams, state tables, and state reduction, Case studies: sequence detector, traffic light controller, vending machine.

Programmable Logic Devices: Memory devices - RAM, ROM, Programmable Logic Arrays (PLA), Programmable Array Logic (PAL)

TEXT BOOKS:

1. M. Morris Mano, Michael D. Ciletti, *Digital Design with an Introduction to the Verilog HDL*, 6th Edition, Pearson Education/PHI, 2017

REFERENCE BOOKS:

1. Ronald J. Tocci, Neal S. Widmer, Gregory L. Moss, *Digital Systems: Principles and Applications*, 10th Edition, Pearson Education.
2. Charles H. Roth Jr., Larry L. Kinney, *Fundamentals of Logic Design*, 6th Edition, Cengage Learning.

CONTROL SYSTEMS ENGINEERING

B Tech II Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC305	Professional Core	L	T	P	2	CIE	SEE	TOTAL
		2	0	0		40	60	100
Prerequisite: Linear Algebra and Calculus, Ordinary Differential Equations and Multivariable Calculus Laplace Transforms, Numerical Methods and Complex variables								

COURSE OBJECTIVES:

1. To introduce the fundamental concepts, classifications, and mathematical modeling of control systems for mechanical and electrical domains.
2. To analyze control system behaviour in time and frequency domains and stability criteria using root locus, Bode plot, Nyquist plot, etc.
3. Design and evaluate compensators and controllers to improve system performance.
4. Explain state-space representation, solution of state equations, and assess system controllability and observability
5. To apply state space techniques

COURSE OUTCOME:

Upon completion of this Course, the students will be able to:

1. Describe open- and closed-loop systems, and develop mathematical models using block diagrams and signal flow graphs.
2. Analyse time response of second-order systems using time-domain specifications, and assess stability using Routh-Hurwitz criterion and root locus techniques.
3. Analyse frequency response plots including Bode, Polar, and Nyquist plots, and investigate system stability.
4. Design compensators and controllers to meet specific performance criteria in control systems.
5. Apply the state-variable approach and analyze controllability and observability.

UNIT-I:

Control System fundamentals: Classification of control systems, Open and Closed loop systems. Mathematical modelling of mechanical systems and their conversion into electrical systems. Block diagram reduction and Signal flow graphs.

UNIT-II:

Time response Analysis: Transfer function and Impulse response, types of input. Transient response of second order system for step input. Time domain specifications. Types of systems, static error coefficients, Routh - Hurwitz criterion for stability.

Root locus techniques: Analysis of typical systems using root locus techniques. Effect of location of roots on system response.

UNIT-III:

Frequency response Analysis: Frequency domain specifications, bode plots, Gain margin and Phase Margin. Polar plot, Nyquist plot, and Nyquist criterion for stability.

UNIT-IV:

Compensators and controllers: Introduction to compensators, Lag compensator, NR25 Regulations

NRCM

Lead compensator, Lag- Lead compensator, Design of compensators using bode plot. Introduction to controllers, P, I, D, PI, PD, PID controllers.

UNIT-V:

State space representation: Concept of state and state variables. State models of linear time invariant systems, State transition matrix, Solution of state equations. Controllability and observability

TEXT BOOKS:

1. I.J. Nagrath and M. Gopal, Control System Engineering, 5ed., New Age Publishers, 2009.
2. Benjamin C. Kuo, Automatic Control Systems, 7ed., PHI, 2010.

2. M. Gopal, Control Systems: Principles and Design, Tata McGraw-Hill, 1997.
3. Norman S. Nise, Control Systems Engineering, 5ed., John Wiley & Sons, 2007.
4. A.K. Jairath, Solutions and Problems of Control Systems, CBS Publishers, 2013.
5. Nagoor Kani, Control Systems, 2ed., RBA Public ati

INNOVATION AND ENTREPRENEURSHIP

B Tech II Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25MB306	Humanities & Social Sciences	L	T	P	2	CIE	SEE	TOTAL
		2	0	0		40	60	100

COURSE OBJECTIVES:

1. To familiarize on the basic concepts of innovation, entrepreneurship and its importance.
2. To Identify and analyze the process of problem-opportunity identification, market segmentation, and idea generation techniques.
3. To initiate prototype development and understand minimum viable product.
4. To develop initial Business and financial planning and Go-to-Market strategies
5. To impart knowledge on establishing startups, venture pitching and IPR

COURSE OUTCOME:

1. Understand the entrepreneurship and the entrepreneurial process and its significance in economic development.
2. Assess the problem from an industry perspective and generate solutions using the design thinking principles.
3. Assess market competition, estimate market size, and develop a prototype.
4. Analyze Business and financial planning models and Go-to-Market strategies.
5. Able to build a start-up, register IP and identify funding opportunities.

UNIT-I:

Fundamentals of Innovation and Entrepreneurship

Innovation: Introduction, need for innovation, Features, Types of innovations, innovations in manufacturing and service sectors, fostering a culture of innovation, planning for innovation.

Entrepreneurship: Introduction, types of entrepreneurship attributes, mindset of entrepreneurial and intrapreneurial leadership, Role of entrepreneurs in economic development. Woman Entrepreneurship, Importance of on-campus startups. Understanding to build entrepreneurial mindset, attributes and networks individuals while on campus.

Core Teaching Tool: Simulation, Game, Industry Case Studies (Personalized for students – 16 industries to choose from), Venture Activity

UNIT-II:

Problem and Customer Identification

Identification of gap, problem, analyzing the problem from a industry perspective, real-world problems, market and customer segmentation, validation of customer problem fit, Iterating problem-customer fit, Competition and Industry trends mapping and assessing initial opportunity, Porter's Five Force Model. Idea generation, Ideation techniques: Brainstorming, Brain writing, Round robin, and SCAMPER, Design thinking principles, Mapping of solution to problem. Core Teaching Tool: Several types of activities including: Class, game, Gen AI, 'Get out of the Building' and Venture Activity

UNIT-III:

Opportunity assessment and Prototype development

Identify and map global competitors, review industry trends, and understand market sizing: TAM, SAM, and SOM. Assessing scope and potential scale for the opportunity.

Understanding prototyping and Minimum Viable Product (MVP). Developing a prototype:

Testing, and validation. Core Teaching Tool: Venture Activity, no-code Innovation tools, Class activity

UNIT-IV:

Business & Financial Models

Introduction to Business Model and types, Lean Canvas Approach: 9-block lean canvas model, building lean canvas for your startup. Business planning: components of Business plan- Sales plan, People plan and financial plan, Financial Planning: Types of costs, preparing a financial plan for profitability using a financial template, understanding the basics of Unit economics, Economies of Scale and analyzing financial performance. Go-To-Market (GTM) approach – Selecting the Right Channel, creating digital presence, and building customer acquisition strategy. Core Teaching Tool: Founder Case Studies – Sama and Securely Share; Class activity and discussions; Venture Activities

UNIT-V:

Startups and IPR

Startup requirements, building founding team members and mentors, pitch preparation, start-up registration process, funding opportunities and schemes, institutional support to entrepreneurs, startup lifecycle, documentation, legal aspects in startup, venture pitching readiness, National Innovation Startup Policy (NISP) and its features. Patents, Designs, Patentability, Procedure for grants of patents. Indian Scenario of Patenting, International Scenario: International cooperation on Intellectual Property. Patent Rights: Scope of Patent Rights. Copyright, trademark, and GI. Licensing and transfer of technology.

Core Teaching Tool: Expert talks; Cases; Class activity and discussions; Venture Activities

TEXT BOOKS:

1. John R Bessant, Joe Tidd, Innovation and Entrepreneurship, 4E, Wiley, Latest Edition.
2. Ajay Batra, The Startup Launch Book- A Practical Guide for Launching Customer Centric Ventures, Wiley, 2020. (For Core Teaching Tool).
3. Entrepreneurship Development and Small Business Enterprises, Poornima M Charantimath, 3E, Pearson, 2018.
4. D.F. Kuratko and T.V. Rao, Entrepreneurship: A South-Asian Perspective, Cengage Learning, 2013.
5. Robert D. Hisrich, Michael P. Peters, Dean A. Shepherd, Sabyasachi Sinha (2020). Entrepreneurship, McGrawHill, 11th Edition
NISP -[Brochure inside pages - startup policy 2019.pdf](#)

MODELLING & SIMULATION LAB

B Tech II Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC307	Professional Core	L	T	P	1	CIE	SEE	TOTAL
		0	0	2		40	60	100

COURSE OBJECTIVE

1. To generate and analyze standard and non-standard signals and sequences using programming and waveform synthesis techniques.
2. To perform basic signal operations such as addition, scaling, shifting, folding, and to compute energy, power, and symmetry properties.
3. To study and verify system properties like linearity, time invariance, stability, and to analyze system responses using convolution and correlation methods.
4. To analyze signals in frequency and complex domains using Fourier, Laplace, and Z-transforms and to plot their magnitude, phase, and pole-zero characteristics.
5. To model and simulate dynamic systems such as RLC circuits and DC motors using Simulink, and to study the effect of PID control, noise removal, and sampling on system performance.

COURSE OUTCOME:

Upon completion of this Course, the students will be able to:

1. Use simulation tools to generate, analyze, and perform operations on signals and sequences in both time and frequency domains.
2. Apply simulation tools to analyze and characterize continuous and discrete-time systems in both time and frequency domains, including the application of sampling concepts.
3. Generate and analyze different types of random signals using simulation tools, compute higher-order statistical moments, and implement basic noise removal techniques.
4. Compute and plot the frequency domain characteristics of signals and systems using Fourier, Laplace, and Z-transforms, including pole-zero analysis.
5. Simulate control systems and design PID controllers using Simulink, and analyze system controllability and observability.

List of Experiments

Any 12 Experiments are to be Simulated

Signals and Systems

1. Write the code / script for generating various standard viz: Periodic and Aperiodic, Unit Impulse, Unit Step, Square, Saw tooth, Triangular, Sinusoidal, Ramp, Sinc and Nonstandard Signals and Sequences generated from these standard signals /sequences using Waveform synthesis. Also for perform different operations viz: Addition, Multiplication, Scaling, Shifting, Folding, Computation of Energy and Average Power on them.
2. Write the code / script for finding the Even and Odd parts of Signal / Sequence and Real and Imaginary parts of Signal.
3. Write the code / script for finding the output of a System for a given input and Impulse Response and finding Auto Correlation and Cross Correlation of Signals /

sequences

4. Write the code / script for Verifying whether a given Continuous/Discrete System is Linear, Time Invariant, Stable and Physically Realizable
5. Write the code / script for obtaining Sinusoidal response and Impulse response of a given Continuous / Discrete LTI System.
 - a. Plot the Real and Imaginary part and
 - b. Magnitude and Phase Plot of the response
6. Write the code / script for finding and plotting the Magnitude and Phase Spectrum of any given Signal by finding its Fourier Transform by using the properties where ever required.
7. Write the code / script for finding and plotting the Magnitude and Phase Spectrum of any given Signal by finding its Laplace Transform by using the properties where ever required. Also plot pole-zero diagram in S-plane
8. Write the code/ script for finding and plotting the Magnitude and Phase Spectrum of any given Sequence by finding its Z-Transform by using the properties wherever required. Also plot pole – zero diagram in Z-plane
9. Design a Simulink or equivalent model for
 - a. Solving Differential Equations
 - b. Finding the response of any RLC Circuit with different initial Conditions for AC and DC inputs and plot the corresponding responses
10. Gibbs Phenomenon and waveform synthesis

Probability Theory and Stochastic Processes

11. Write the code / script for generating various Random Variables with different CDFs/ PDFs
12. Write the code / script for generating Gaussian noise and for finding its mean, Skewness, Kurtosis, PDF and PSD.
13. Write the code / script for Verifying Sampling theorem for different sampling rates, Sampling types and Duty Cycles and for plotting the sampled and reconstructed Signals.
14. Write the code / script for Removal of noise from the signal using Cross correlation.
15. Write the code / script for Extraction of Periodic Signal masked by noise using Auto Correlation

Control Systems

16. Build and Simulate a DC Motor using Simulink
17. Implementation of a PID Controller from equations using Simulink
18. Controllability and Observability

Note: For the experiments with code/scripts written in MATLAB or equivalent (1-8, 11-15), the student can design a user interface or app using MATLAB App Designer or equivalent

Application on Real Time signals

1. Application of Autocorrelation: GPS Synchronization Satellite communication toolbox is required for this experiment.

Generate the GPS signal. Visualize the GPS signal. Plot of autocorrelation of C/A code and visualize the spectrum of GPS signals. For exact steps, go through the following page: <https://www.mathworks.com/help/satcom/ug/gps-waveform-generation.html>

2. Sampling of Speech Signals

Record and play speech in MATLAB. For steps, go through the following page:

https://in.mathworks.com/help/matlab/import_export/record-and-play-audio.html

Change the sampling rate of the recorded speech signal and play back to see the effect of aliasing. For steps, go through the following page:

<https://in.mathworks.com/help/signal/ug/changing-signal-sample-rate.html>

ELECTRONIC DEVICES AND CIRCUITS LAB

B Tech II Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC308	Professional Core	L	T	P	1	CIE	SEE	TOTAL
		0	0	2		40	60	100

COURSE OBJECTIVES:

1. This laboratory course is designed to provide practical experience and simulation-driven Learning in semiconductor devices and fundamental electronic circuits
2. Students will explore the characteristics and applications of diodes, BJTs—including biasing Techniques – and FETS
3. Students will analyze the characteristics and design of rectifier circuits
4. Students will explore the characteristics and performance of transistor amplifier circuits in Various configurations
5. The course connects theoretical knowledge with hands-on application, building essential Foundational skills in analog electronics and circuit analysis

COURSE OUTCOME:

By the end of this course, students will be able to:

1. Analyze the I–V characteristics of semiconductor devices such as diodes, BJTs, and FETs.
2. Design and evaluate basic rectifier, clipper, clamper, and voltage regulation circuits.
3. Demonstrate biasing techniques for BJTs and determine their operating point using DC load line analysis.
4. Design and analyze transistor amplifier circuits in various configurations using h-parameter models.
5. Simulate and interpret electronic circuits using appropriate simulation tools

List of Experiments:

A. Hardware-Based Experiments :

1. Study the I–V characteristics of a PN junction diode in forward and reverse bias to determine cut-in voltage and dynamic resistance.
2. Examine the reverse bias characteristics of a Zener diode and demonstrate its application as a voltage regulator under varying conditions.
3. Design and analyze half-wave and full-wave rectifiers (center-tap and bridge) with and without capacitor filters to evaluate ripple factor and output voltage.
4. Implement clipper circuits to observe waveform shaping through positive, negative, and biased configurations.
5. Implement clamper circuits to observe waveform shaping through positive, negative, and biased configurations.
6. Switching Characteristics of Transister
7. Plot the input and output characteristics of a BJT in common emitter configuration to determine input/output resistance and current gain.
8. Construct and analyze a Common Base (CB) configuration of a BJT to study input-output characteristics and determine current gain (α) and input/output resistance

9. Design and test fixed bias and voltage divider bias circuits to establish a stable operating point for a BJT amplifier and study DC load line behavior.
10. Design CE Amplifier and determine 3-db Bandwidth
11. Study the I-V characteristics of a SCR diode
12. Determine photo Diode Characteristics
13. Determine LED Characteristics

Hardware Requirements:

1. Regulated DC Power Supply (0–30V)
2. Function Generator
3. Digital Multimeter
4. Cathode Ray Oscilloscope (CRO) or DSO
5. Breadboards and Connecting Wires
6. Resistors, Capacitors, Diodes (1N4007, Zener Diodes)
7. BJTs (e.g., BC107, 2N2222), JFETs (e.g., J201), MOSFETs (e.g., IRF540N)
8. Trainer Kits (optional but preferred for ease)

DIGITAL LOGIC DESIGN LAB

B Tech II Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC309	Professional Core	L	T	P	1	CIE	SEE	TOTAL
		0	0	2		40	60	100

COURSE OBJECTIVES:

1. To understand and implement basic logic gates and Boolean algebra using SOP and POS forms.
2. To design and verify combinational logic circuits such as adders, subtractors, multiplexers, decoders, and code converters.
3. To construct and analyze logic circuits using universal gates (NAND and NOR).
4. To design and implement sequential logic circuits including flip-flops, shift registers, and counters.
5. To develop the ability to realize, test, and verify digital circuits through practical hardware experiments and simulation

COURSE OUTCOME:

After completing this course, students will be able to:

1. Acquire the knowledge on numerical information in different forms and Boolean algebra theorems.
2. Apply Boolean algebra and minimization techniques to simplify Boolean functions.
3. Design combinational circuits using logic gates.
4. Analyze latches and flip-flops to design sequential logic circuits.
5. Construct synchronous sequential circuits combining flip-flops and logic gates and

List of Experiments:

A. Realization in Hardware Laboratory (Using Logic ICs)

These are fundamental hands-on experiments conducted using logic ICs such as AND, OR, NOT, NAND, NOR, XOR gates, flip-flops, multiplexers, and decoders.

1. Realize and minimize Boolean functions using basic gates and universal gates (NAND/NOR) in SOP/POS form.
2. Design and implement Half Adder, Full Adder, Half Subtractor, and Full Subtractor using logic gates.
3. Construct and analyze basic logic gates (AND, OR, NOT, XOR, XNOR) using only NAND and NOR gates.
4. Design and implement parity bit generators (even and odd) and a 4-input majority logic circuit.
5. Design and implement code converters such as Binary to Gray, Gray to Binary, and BCD to Excess-3 using gates.
6. Design and implement simple combinational circuits: 2-to-1 multiplexer, 1-bit comparator, and 7-segment decoder logic.
7. Implement the given Boolean function using given Decoder
8. Convert decoder to Demultiplexer and vice versa.

9. Verification of Truth Tables Using Different Clocks and also Convert the given FF from one type to other
10. Design and implement universal n-bit shift register (left, right, hold, parallel load)
11. Design a Synchronous counter using D-FF /given FF
12. Design Asynchronous counter for the given Sequence using given FF
13. Design Mod-8 counter Using JK FF

B. Design and Simulate using Software (Simulation-Based)

1. Design and simulate a 2-bit comparator and verify outputs
2. Design and simulate a 2:1 multiplexer and verify Outputs

Required Hardware (for Hardware Lab Experiments)

Component	Description
Digital Trainer Kit	Breadboard with power supply and clock generator
Logic ICs	7400 (NAND), 7402 (NOR), 7408 (AND), 7432 (OR), 7486 (XOR), 7404 (NOT), etc.
Flip-Flop ICs	7474 (D Flip-Flop), 7476 (JK Flip-Flop)
MUX/Decoder ICs	74153, 74138, 74139
LEDs, switches, connecting wires	For I/O interface and testing

Required Software Tools (for Verilog HDL Experiments) (Any one of the tool below)

Software	Purpose
Microwind DSCH	Design and Simulation of Digital Electronics (preferred tool)
ModelSim	Verilog simulation and waveform analysis
Xilinx ISE	Legacy support for simulation and FPGA design

LINUX SHELL SCRIPTING LAB

B Tech II Year I Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25SD310	Skill Development	L	T	P	1	CIE	SEE	TOTAL
		0	0	2		40	60	100

COURSE OBJECTIVES:

1. To enable students to write shell scripts for solving problems and automating tasks in Linux.
2. To implement standard Linux utilities and system commands using system calls
3. in C.
4. To develop skills in inter-process communication, process management, and synchronization.
5. To design and implement client-server communication using Unix and Internet domain sockets.

COURSE OUTCOME:

After successful completion of this lab, the student will be able to:

1. Demonstrate proficiency in working with the Linux environment and command-line tools.
2. Write shell scripts for file management, process handling, and task automation.
3. Implement standard Linux utilities using system calls in C programs.
4. Develop network-based applications using sockets for client-server communication.
5. Apply concepts of inter-process communication (pipes, message queues, shared memory) in real-time applications

List of Experiments:

Note: Use Bash for Shell scripts.

1. Write a shell script that accepts a file name, starting and ending line numbers as arguments and displays all the lines between the given line numbers.
2. Write a shell script that deletes all lines containing a specified word in one or more files supplied as arguments to it
3. Write a shell script that displays a list of all the files in the current directory to which the user has read, write and execute permissions.
4. Write a shell script that receives any number of file names as arguments checks if every argument supplied is a file or a directory and reports accordingly. Whenever the argument is a file, the number of lines on it is also reported.
5. Write a shell script that accepts a list of file names as its arguments, counts and reports the occurrence of each word that is present in the first argument file on other argument files.
6. Write a shell script to list all of the directory files in a directory.
7. Write a shell script to find factorial of a given integer.
8. Write an awk script to count the number of lines in a file that do not contain vowels.
9. Write an awk script to find the number of characters, words and lines in a file.
10. Write a C program that makes a copy of a file using standard I/O and system calls.
11. Implement in C the following Linux commands using System calls

- Cat
 - mv
12. Write a C program to list files in a directory.
 13. Write a C program to emulate the Unix `ls -l` command.
 14. Write a C program to list for every file in a directory, its inode number and file name.
 15. Write a C program that redirects standard output to a file.Ex: `ls > f1`.
 16. Write a C program to create a child process and allow the parent to display “parent” and the child to display “child” on the screen.
 17. Write a C program to create a Zombie process.
 18. Write a C program that illustrates how an orphan is created.
 19. Write a C program that illustrates how to execute two commands concurrently with a command pipe. Ex :- `ls -l | sort`
 20. Write C programs that illustrate communication between two unrelated processes using named pipe (FIFO File).
 21. Write a C program in which a parent writes a message to a pipe and the child reads the message.
 22. Write a C program (sender.c) to create a message queue with read and write permissions to write 3 messages to it with different priority numbers.
 23. Write a C program (receiver.c) that receives the messages (from the above message queue as specified in (22)) and displays them.
 24. Write a C program that illustrates suspending and resuming processes using signals.
 25. Write Client and Server programs in C for connection-oriented communication between Server and Client processes using Unix Domain sockets to perform the following:

Client process sends a message to the Server Process. The Server receives the message, reverses it and sends it back to the Client. The Client will then display the message to the standard output device.
 26. Write Client and Server programs in C for connection-oriented communication between Server and Client processes using Internet Domain sockets to perform the following:

Client process sends a message to the Server Process. The Server receives the message, reverses it and sends it back to the Client. The Client will then display the message to the standard output device.
 27. Write C programs to perform the following:

One process creates a shared memory segment and writes a message (“Hello”) into it. Another process opens the shared memory segment and reads the message (i.e. “Hello”). It will then display the message (“Hello”) to standard output device.

TEXT BOOKS:

1. Beginning Linux Programming, 4th Edition, N. Matthew, R. Stones, Wrox, Wiley India Edition.
2. Advanced Unix Programming, N. B. Venkateswarulu, BS Publications.
3. Unix and Shell Programming, M.G. Venkatesh Murthy, Pearson Education.

- 4 Unix Shells by Example, 4th Edition, Ellie Quigley, Pearson Education.
- 5 Sed and Awk, O. Dougherty & A. Robbins, 2nd edition, SPD

ELECTROMAGNETIC FIELDS AND TRANSMISSION LINES

B Tech II Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC401	Professional Core	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100
Prerequisite: Mathematics								

COURSE OBJECTIVES:

1. To learn the Basic Laws, Concepts and proofs related to Electrostatic Fields and Magneto static Fields and apply them to solve physics and engineering problems.
2. To distinguish between static and time-varying fields and understand the significance and utility of Maxwell's Equations and Boundary Conditions, and gain ability to provide solutions to communication engineering problems.
3. To analyze the characteristics of Uniform Plane Waves (UPW), determine their propagation parameters and estimate the same for dielectric and dissipative media.
4. To analyze the propagation of waves in transmission line and able to solve transmission line problem using Smith Chart

COURSE OUTCOME:

Upon completing this course, the student will be able to

1. Acquire knowledge of Basic Laws, Concepts and solve problems related to Electrostatic Fields
2. Acquire knowledge of Basic Laws, Concepts and solve problems related to Magneto statics Fields.
3. Differentiate the static and time-varying EM fields and apply Maxwell's Equations at different Boundaries.
4. Able to classify conductors and dielectric materials and analyze the Wave Propagations in those mediums.
5. To solve transmission line problems numerically and using smith charts

UNIT-I:

Electrostatics

Review of Coordinate Systems & Vector Calculus, Coulomb's Law, Electric Field Intensity – Fields due to Different Charge Distributions, Electric Flux Density, Gauss Law and its applications, Electric Potential, Relation between E and V, Maxwell's Equations for Electrostatic Fields, Energy Density, Convection and Conduction Currents, Dielectric Constant, Isotropic and Homogeneous Dielectrics, Continuity Equation, Relaxation Time, Poisson's and Laplace's Equations, Capacitors–Parallel Plate, Coaxial, Spherical

UNIT-II:

Magnetostatics

Biot-Savart's Law, Ampere's Circuit Law and its applications, Magnetic Flux Density, Maxwell's equations for Magnetostatic Fields, Magnetic Scalar and Vector Potentials, Forces due to Magnetic Fields, Magnetic dipole Moment

UNIT-III:

Maxwell's Equations (Time Varying Fields)

Faraday's Law, Transformer and Motional EMF, Inconsistency in Ampere's Law and Displacement Current Density, Maxwell's Equations in Differential, Integral and Phasor form. Electric and magnetic Boundary Conditions (Dielectric – Dielectric, Conductor– Dielectric, Conductor– Free Space interfaces).

UNIT-IV:

EM Wave Characteristics

Wave Equations for Conducting and Perfect Dielectric Media, Uniform Plane Waves– Definitions, Relation between E&H, Wave Propagation in Lossless and Conducting Media, Conductors & Dielectrics – Characterization, Wave Propagation in Good Conductors and Good Dielectrics, Skin Depth, Surface Impedance, Wave Polarization. Poynting Vector and Poynting Theorem. Reflection and Refraction of Plane Waves – Normal and Oblique Incidences for both Perfect Conductor and Perfect Dielectrics, Brewster Angle, Critical Angle and Total Internal Reflection

UNIT-V:

Transmission Lines

Types, Parameters, Equivalent Circuit, Transmission Line Equations, Primary & Secondary Constants, Expressions for Characteristic Impedance, Propagation Constant, Phase and Group Velocities, Infinite Line Concepts, Lossless Lines, Types of Distortions, condition for Distortion less transmission lines, Minimum Attenuation, Loading – Types of Loading, Input Impedance, SC and OC Lines, Reflection Coefficient, VSWR, Impedance Transformations - $\lambda/4$, $\lambda/2$, $\lambda/8$ Lines, Smith Chart- Configuration and Applications, Single Stub Matching

TEXT BOOKS:

1. Engineering Electromagnetics – William H. Hayt Jr. and J. Buck, 8th Ed., McGrawHill, 2014
2. Principles of Electromagnetics – Matthew N.O. Sadiku and S.V. Kulkarni, 6th Ed., Oxford University Press, Asian Edition, 2015

REFERENCE BOOKS:

1. Electromagnetic Waves and Radiating Systems – E.C. Jordan and K.G. Balmain, 2nd Ed., PHI, 2000.
2. Engineering Electromagnetics – Nathan Ida, 2nd Ed., Springer (India) Pvt. Ltd., New Delhi, 2005.
3. Electromagnetic Field Theory Fundamentals – Bhag Singh Guru and Huseyin R. Hiziroglu, Cambridge University Press, 2nd Ed., 2006

NUMERICAL METHODS AND COMPLEX VARIABLES

B Tech II Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25MA402	Basic Sciences	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100
Prerequisite: Mathematics courses of first year of study								

COURSE OBJECTIVES:

1. Expressing periodic function by Fourier series and a non-periodic function by Fourier transforms
2. Applying numerical techniques for solving polynomial and transcendental equations, including Bisection, Iteration, Newton-Raphson, and Regula-Falsi methods.
3. Evaluating integrals using numerical techniques.
4. Apply Cauchy-Riemann equations, harmonic functions, and methods to find harmonic conjugates.
5. Understanding the concepts of zeros, singularities, residues, and the application of Cauchy Residue Theorem in solving engineering problems

COURSE OUTCOME:

Student will be able to

1. Apply Fourier series and transforms to represent periodic functions and analyze signals using sine and cosine components.
2. Compute forward, backward, and central differences, and use symbolic relations to simplify calculations for interpolation and polynomial approximations.
3. Apply numerical integration techniques and solve first-order ordinary differential equations using Taylor, Euler, and Runge-Kutta methods.
4. Analyse complex functions for differentiability and analyticity, and apply methods to find harmonic conjugates and study elementary analytic functions.
5. Evaluate complex integrals using Cauchy's theorems and apply residue calculus to analyze singularities and series expansions

UNIT-I:

Fourier Series & Fourier Transforms

Fourier series – Dirichlet's Conditions – Half-range Fourier series – Fourier Transforms: Fourier Integral Theorem (Only statements), Fourier Sine and Cosine transforms (Elementary illustrations)

UNIT-II:

Numerical Methods-I

Solution of polynomial and transcendental equations: Bisection method – Iteration Method – Newton-Raphson method and Regula-Falsi method. Finite differences: forward differences – backward differences – central differences – symbolic relations – Interpolation using Newton's forward and backward difference formulae – Lagrange's method of interpolation

UNIT-III:

Numerical integration: Trapezoidal rule - Simpson's 1/3rd and 3/8th rules.

Ordinary differential equations: Taylor's series – Euler's method – Runge-Kutta method of fourth order for first order ODE

UNIT-IV:

Complex Differentiation

Differentiation of Complex functions – Analyticity – Cauchy-Riemann equations (without proof) – Harmonic Functions – Finding harmonic conjugate – Milne-Thomson method – Elementary analytic functions (exponential, trigonometric, logarithm) and their properties

UNIT-V:

Complex Integration

Line integral – Cauchy's theorem – Cauchy's Integral formula – Zeros of analytic functions – Singularities – Taylor's series – Laurent's series. Residues – Cauchy Residue theorem (All theorems without Proof)

TEXT BOOKS:

1. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 36th Edition, 2010.
2. S.S. Sastry, Introductory methods of numerical analysis, PHI, 4th Edition, 2005

ANALOG AND DIGITAL COMMUNICATIONS

B Tech II Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC403	Professional Core	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100
Prerequisite: Mathematics								

COURSE OBJECTIVES:

1. To develop ability to analyze system requirements of analog and digital communication systems.
2. To understand the generation, detection of various analog and digital modulation techniques.
3. To acquire theoretical knowledge of each block in AM, FM transmitters and receivers.
4. To understand the concepts of baseband transmissions
5. To understand the fundamental concepts of information theory

COURSE OUTCOME:

Upon completing this course, the student will be able to:

1. Analyse the need for modulation and describe various amplitude and angle modulation techniques along with their generation and detection methods.
2. Compare and analyze the characteristics and performance of AM and FM transmitters and receivers, including noise behavior and pre-emphasis/de-emphasis techniques.
3. Apply the principles of digital modulation and baseband shaping techniques for data transmission and interpret eye diagrams and inter symbol interference.
4. Explain and apply various digital modulation techniques and analyze their performance in terms of noise, power spectrum, and bandwidth efficiency.
5. Evaluate information-theoretic concepts such as entropy, channel capacity, and apply source and channel coding techniques for efficient data communication

UNIT-I:

Amplitude Modulation

Need for modulation, Amplitude Modulation: Time and frequency domain description, Generation — Switching modulator, Detection - Envelope detector, DSB-SC Modulation: Generation — Balanced Modulator, Detection- Synchronous detector, COSTAS Loop, SSB Modulation: Time and frequency domain description, Generation — Phase discrimination Method and Demodulation - coherent detection, Vestigial side band modulation and demodulation

Angle Modulation

Basic concepts of Phase Modulation, Frequency Modulation: Single tone frequency modulation, Spectrum Analysis, Carson's Rule, Generation of FM Waves- Armstrong Method, Detection of FM Waves - Phase locked loop, Comparison of FM and AM

UNIT-II:

Transmitters & Receivers

Classification of Transmitters, AM Transmitters, FM Transmitters, AM Receiver - Super heterodyne receiver, FM Receivers, Stereo FM multiplex reception, Comparison of AM and FM Receiver. Noise analysis in AM, DSB, SSB and FM Modulation System, Threshold effect in Angle

Modulation System, Pre- emphasis, and de-emphasis

Pulse Modulation

Types of Pulse modulation-PAM, PWM and PPM, Comparison of FDM and TDM

UNIT-III:

Detection and Estimation: Model of Digital Communication Systems, Geometric Interpretation of Signals, Gram-Schmidt Orthogonalization, Matched filter Receiver and its Properties, Correlation receiver, Detection of signals with unknown Phase in Noise

Base Band Shaping for Data Transmission: Requirements of a line encoding format, various line encoding formats- Unipolar, Polar, Bipolar, Discrete PAM signals, Inter symbol interference, Nyquist's criterion, Correlation coding: Duobinary signaling, Modified Duobinary technique, generalized form of correlation coding, Eye Diagram

UNIT-IV:

Digital Modulation Techniques:

PCM Generation and Reconstruction, Quantization Noise, Non-Uniform Quantization and Companding, DPCM, DM, Noise in PCM and DM. Digital Modulation formats, Coherent binary modulation techniques (BPSK, BFSK), Coherent quadrature modulation techniques (QPSK), Non-Coherent binary modulation techniques (BFSK, DPSK), power spectra, and bandwidth efficiency for BPSK, constellation diagrams

UNIT-V:

Information theory: Entropy, Information rate, Mutual information, Channel capacity of discrete channel, Shannon-Hartley law; Trade-off between bandwidth and SNR.

Source coding - Huffman coding, Shannon Fano coding, Channel coding - Linear block codes and cyclic codes

TEXT BOOKS:

1. Electronics Communication Systems-Fundamentals through Advanced-Wayne Tomasi, 5th Edition, PHI, 2009.
2. Digital and Analog Communication System – K. Sam Shanmugam, Wiley, 2019.
3. Principles of Communication Systems - Herbert Taub, Donald L Schilling, Goutam Saha, 3rd Edition, McGraw-Hill, 2008

REFERENCE BOOKS:

1. Electronic Communications – Dennis Roddy and John Coolean, 4th Edition, PEA, 2004
2. Electronics & Communication System – George Kennedy and Bernard Davis, TMH, 2004
3. Communication System - Simon Haykin and Michael Moher, Wiley, 5th edition, 2024

ELECTRONIC CIRCUIT ANALYSIS

B Tech II Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC404	Professional Core	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100

COURSE OBJECTIVES:

1. Understand the design and operation of analog electronic circuits.
2. Analyze multistage and feedback amplifiers.
3. Study the principles of oscillators and power amplifiers.
4. Explore frequency response, feedback theory, and transistor behavior at high frequencies.
5. Develop practical skills in waveform generation and analog circuit design for communication systems.

COURSE OUTCOME:

By the end of this course, students will be able to:

1. Analyze multistage amplifier configurations with coupling effects and apply the hybrid- π model to evaluate high-frequency behavior of common-emitter amplifier.
2. Examine feedback amplifier types and assess the influence of negative feedback on gain stability, bandwidth, and distortion.
3. Design and analyse LC, RC and crystal oscillators based on the Barkhausen criterion to generate sinusoidal waveforms.
4. Analyse power amplifiers and evaluate their performance in terms of efficiency and distortion.
5. Design and evaluate different Multivibrators and time base generators

UNIT-I:

Multistage Amplifiers: Classification of Amplifiers, Distortion in Amplifiers, Coupling schemes: RC, Transformer, Direct coupling, Frequency response of multistage amplifiers, Transistor configuration choice in cascade amplifiers, Cascade and Cascode amplifiers, Darlington pair amplifier.

High-Frequency Transistor Model: Hybrid- π model, Hybrid- π parameters: Conductances and capacitances, CE short-circuit current gain, Gain with resistive load and gain-bandwidth product

UNIT-II:

Feedback Amplifiers: Concept and need for feedback in amplifiers, Types and classification of feedback amplifiers, Characteristics of negative feedback: Gain stability, bandwidth, noise, distortion, Voltage series, Voltage shunt, Current series, Current shunt configurations.

UNIT-III:

Oscillators: Principle of positive feedback, Barkhausen Criterion for oscillations, LC Oscillators: Generalized analysis, Hartley, Colpitts, RC Oscillators: RC phase shift, Wien bridge, Crystal oscillator: Working and advantages

UNIT-IV:

Power Amplifiers: Classification: Class A, B, AB, C, Series-fed Class A amplifier, Transformer-coupled Class A amplifier, Class B amplifier: Push-pull, Complementary symmetry, Efficiency calculations and Crossover distortion

UNIT-V:

Multivibrators: Analysis and design of Bistable, Monostable and Astable multivibrators and Schmitt Trigger using transistors.

Time Base Generators: General features of a time base signal, methods of generating time base waveform, Miller and Bootstrap time base generators, Linearity improvement techniques

TEXT BOOKS:

LINEAR AND DIGITAL IC APPLICATIONS

B Tech II Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC406	Professional Core	L	T	P	3	CIE	SEE	TOTAL
		3	0	0		40	60	100
Prerequisite: Switching Theory and Logic Design.								

COURSE OBJECTIVES:

The main objectives of the course are:

1. To introduce the basic building blocks of linear integrated circuits.
2. To introduce the theory and applications of analog multipliers and PLL.
3. To introduce the concepts of waveform generation and introduce some special function ICs.
4. To understand and implement the working of basic digital circuits.

COURSE OUTCOME:

Upon completing this course, the student will be able to

1. Understand the principles and applications of operational amplifiers and linear integrated circuits.
2. Explain the functional diagrams and design timing and phase-locked loop applications using IC555 and IC565.
3. Design and implement data converters such as ADCs and DACs for signal processing applications.
4. Evaluate the characteristics of combinational logic ICs to select appropriate components for digital systems.
5. Analyze the features of digital integrated circuits to choose suitable devices for specific applications.

UNIT-I:

Operational Amplifier

Ideal and Practical Op-Amp Characteristics, Features of 741 Op- Amp, Modes of Operation - Inverting, Non-Inverting, Differential, Instrumentation Amplifier, AC Amplifier, Differentiators and Integrators, Comparators, Schmitt Trigger, Introduction to Voltage Regulators, Features of 723 Regulator, Three Terminal Voltage Regulators

UNIT-II:

Op-Amp, IC-555 & IC565 Applications

Introduction to Active Filters, Characteristics of Band pass, Band reject and All Pass Filters, Analysis of 1st order LPF & HPF Butterworth Filters, Waveform Generators – Triangular, Sawtooth, Square Wave, IC555 Timer - Functional Diagram, Monostable and Astable Operations, Applications, IC565 PLL - Block Schematic, principle and Applications

UNIT-III:

Data Converters

Introduction, Basic DAC techniques, Different types of DACs-Weighted resistor DAC, R-2R ladder DAC, Inverted R-2R DAC, Different Types of ADCs - Parallel Comparator Type ADC, Counter Type ADC, Successive Approximation ADC and Dual Slope ADC, DAC and ADC Specifications

UNIT-IV:

Combinational Logic ICs

Specifications and Applications of TTL-74XX & CMOS 40XX Series ICs - Code Converters, Decoders, LED & LCD Decoders with Drivers, Encoders, Priority Encoders, Multiplexers, Demultiplexers, Priority Generators/Checkers, Parallel Binary Adder/Subtractor, Magnitude Comparators

UNIT-V:

Sequential Logic IC's and Memories

Familiarity with commonly available 74XX & CMOS40XX Series ICs- All Types of Flip-flops, Synchronous Counters, Decade Counters, Shift Registers.

Memories - ROM Architecture, Types of ROMs & Applications, RAM Architecture, Static & Dynamic RAMs

TEXT BOOKS:

1. Op-Amps & Linear ICs- Ramakanth A. Gayakwad, PHI, 2003.
2. Digital Fundamentals -Floydand Jain, Pearson Education,8th Ed., 2005

REFERENCE BOOKS:

1. Linear Integrated Circuits -D. Roy Chowdhury, New Age International (p) Ltd, 2ndEd., 2003.
2. Digital Design Principles and Practices-John. F. Wakerly, Pearson 3rd Ed., 2009.
3. Linear Integrated Circuits and Applications - Salivahana, TMH, 2008.

ANALOG AND DIGITAL COMMUNICATIONS LAB

B Tech II Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC407	Professional Core	L	T	P	1.5	CIE	SEE	TOTAL
		0	0	3		40	60	100

COURSE OBJECTIVES:

1. To study and understand various analog modulation and demodulation techniques such as AM, FM, DSB-SC, and SSB-SC.
2. To learn and implement digital modulation techniques like ASK, FSK, PSK, DPSK, and QPSK using hardware and simulation tools.
3. To design and analyze pulse modulation techniques such as PAM, PWM, and PPM using 555 timers.
4. To verify the sampling theorem and understand the concepts of multiplexing and signal reconstruction.
5. To simulate and analyze advanced digital communication concepts such as eye diagrams, constellation diagrams, coding techniques, and matched filters.

COURSE OUTCOME:

1. Design and analyze various analog modulation and demodulation techniques such as AM, FM, DSB-SC, and SSB, and analyze their time and frequency domain characteristics.
2. Implement and verify pulse modulation techniques such as PAM, PWM, and PPM using hardware circuits and interpret their practical waveforms.
3. Generate and demodulate digital modulation schemes such as PCM, DM, FSK, BPSK, DPSK, and QPSK, and compare theoretical and practical results.
4. Analyze the performance of digital modulation techniques using constellation and eye diagrams, and evaluate the effects of noise and inter-symbol interference.
5. Apply source and channel coding methods such as Huffman and Shannon–Fano coding, and assess the role of matched filters and raised cosine filtering in digital communication systems

List of Experiments:

Minimum 12 Experiments should be Conducted

All these experiments are to be simulated first either using MATLAB, Commsim or any other simulation package and then to be realized in hardware

1. Generate Amplitude modulated Signal and perform demodulation for different modulation indices. Plot the corresponding waveforms and their spectrum. Compare the modulation index theoretically and practically. Plot the effect of modulating Signal frequency and Amplitude on the modulation index.
2. Generate Frequency modulated Signal and perform demodulation for different modulation indices. Plot the corresponding waveforms and their spectrum. Compare the modulation index theoretically and practically. Plot the effect of modulating Signal frequency and Amplitude on the modulation index.
3. Generate modulated and demodulate DSB-SC Signal for different modulation indices and plot the corresponding waveforms and their spectrum. Compare the modulation index theoretically and practically

4. Generate and demodulate SSB-SC modulated Signal (Phase Shift Method) for different modulation indices and plot the corresponding waveforms and their spectrum. Also calculate theoretically and practically the modulation index in each case
5. Demonstrate the Frequency Division Multiplexing & De multiplexing practically by transmitting at least 4 different signals simultaneously with respect to time and recovering without distortion.
6. Verify Sampling theorem for different sampling rates, Sampling types and Duty Cycles and Plot the sampled and reconstructed Signals. Write the conclusions, based on practical observations
7. Design and implement a Pulse Amplitude Modulator & Demodulator Circuit using 555 timer and plot the corresponding waveforms from the practical observations
8. Design and implement a Pulse Width Modulator & Demodulator Circuit using 555 timer and plot the corresponding waveforms from the practical observations
9. Design and implement a Pulse Position Modulator & Demodulator Circuit using 555 timer and plot the corresponding waveforms from the practical observations
10. Generate PCM Modulated Signal and demodulate it by designing and implementing the corresponding Demodulator. Plot the corresponding waveforms from practical observations
11. Generate Delta Modulated Signal and demodulate it by designing and implementing the corresponding Demodulator. Plot the corresponding waveforms from practical observations.
12. Generate FSK modulated Signal and demodulate it by designing and implementing the corresponding Demodulator. Plot the corresponding waveforms from practical observations.
13. Generate practically Binary PSK modulated Signal and demodulate it by designing and implementing the corresponding Demodulator. Plot the corresponding waveforms from practical observations.
14. Generate practically DPSK modulated Signal and demodulate it by designing and implementing the corresponding Demodulator. Plot the corresponding waveforms from practical observations.
15. Generate practically QPSK modulated Signal and demodulate it by designing and implementing the corresponding Demodulator. Plot the corresponding waveforms from practical observations.
16. Plot Signal Constellation for BPSK, BFSK and QPSK
17. Analyze the performance of BPSK, BFSK and QPSK under noisy environment through constellation diagram
18. Demonstrate ISI through eye diagram
19. Simulate raised cosine signal and duo binary signals
20. Encode data using Shannon Fano /Huffman Coding through Hardware / Simulator
21. Analyze the performance of a Matched filter

ELECTRONIC CIRCUIT ANALYSIS LAB

B Tech II Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC408	Professional Core	L	T	P	1.5	CIE	SEE	TOTAL
		0	0	3		40	60	100

COURSE OBJECTIVES:

1. Gain hands-on experience in designing and building analog electronic circuits.
2. Implement and test amplifiers, oscillators, power amplifiers, and multi-vibrators.
3. Use discrete components and simulation tools for circuit analysis.
4. Understand frequency response, gain, and feedback through practical experiments.
5. Learn waveform shaping and time base generation techniques in the lab.

COURSE OUTCOME:

Upon successful completion of this lab, students will be able to:

1. Design and analyze multistage and power amplifiers and evaluate their frequency response and efficiency.
2. Implement and examine feedback and oscillator circuits and validate theoretical conditions for sustained oscillations.
3. Develop and interpret waveform generation circuits such as multivibrators and time base generators.
4. Perform simulations to validate analog circuit performance using industry-standard software tools.
5. Correlate practical results with theoretical predictions and identify deviations due to real-world constraints.

List of Experiments:

A. Hardware Experiments (7):

Perform practical design, implementation, and waveform analysis of amplifiers, oscillators, power stages, and multivibrators to validate theoretical concepts and observe real-world circuit behavior.

1. Design and analyze a two-stage RC coupled amplifier to demonstrate gain enhancement and study coupling capacitance effects.
2. Design Hartley and Colpitts oscillators for a specified frequency and observe their output waveforms.
3. Design an RC phase shift oscillator and derive the practical gain condition for oscillations at a given frequency.
4. Design a transformer-coupled class A power amplifier, observe input/output waveforms, and calculate efficiency.
5. Design a class B power amplifier, analyze input/output waveforms, and evaluate harmonic distortion.
6. Design a bistable multivibrator, analyze commutating capacitor effects, and record transistor waveforms.
7. Design an astable multivibrator and observe transistor base and collector waveforms.

B. Software Simulations (7):

Use circuit simulation software to design, analyze, and verify the performance of feedback amplifiers, waveform generators, and power amplifier circuits through virtual experimentation and frequency response evaluation.

1. Simulate four feedback amplifier topologies and compare their frequency responses with and without feedback.
2. Simulate a monostable multivibrator and analyze its input/output waveforms.
3. Simulate a Schmitt trigger for gain values greater than and less than one and analyze response behavior.
4. Simulate a bootstrap time base generator using BJT and observe the output sweep waveform.
5. Simulate a Miller sweep circuit using BJT and observe the time base output waveform.
6. Simulate a complementary symmetry push-pull amplifier and verify elimination of crossover distortion.
7. Simulate a single tuned amplifier and determine the quality factor (Q) of its tuned circuit.

Software Requirements:

Simulation Tools: LTspice / Multisim / PSpice / Proteus / NI Multisim Live or equivalent

Operating System: Windows 10/11 or Linux (Ubuntu preferred)

Hardware Requirements:

1. Dual Power Supply ($\pm 15\text{V}$, 0–30V)
2. Function Generator (up to 1 MHz)
3. CRO / DSO (Dual Channel, 20 MHz or more)
4. Digital Multimeters
5. Breadboards and Connecting Wires
6. BJTs: BC107, BC547, BC557, 2N2222, etc.
7. Resistors, Capacitors (Wide range of values)
8. Transformers (for power amplifiers)
9. Inductors, Crystals (1 MHz, 4 MHz, etc.)

Heat sinks, transistors for power stages (e.g., TIP41, TIP42 etc.)

LINEAR AND DIGITAL IC APPLICATIONS LAB

B Tech II Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25EC409	Professional Core	L	T	P	1	CIE	SEE	TOTAL
		0	0	2		40	60	100

COURSE OBJECTIVES:

1. To understand and analyze the operation of analog electronic circuits using Op-Amps, including amplifiers, filters, waveform generators, and signal processing circuits.
2. To design, construct, and evaluate timing and multivibrator circuits using IC 555 and waveform shaping circuits for signal generation and control applications.
3. To implement and verify the working of digital circuits including encoders, decoders, multiplexers, adders, subtractors, counters, and memory using standard digital ICs.
4. To study and apply data conversion circuits such as DACs and ADCs for interfacing between analog and digital systems.
5. To analyze the working of voltage regulators and power supply circuits using ICs, and measure performance characteristics such as load regulation

COURSE OUTCOME:

1. Design and implementation of various Analog circuits using 741 ICs.
2. Design and analyse filter circuits using op-amp.
3. Design and implementation of various Multivibrators using 555 timer.
4. Design and implement various circuits using digital ICs.
5. Design and implement ADC, DAC and voltage regulators

List of Experiments:

1. Design an Inverting and Non-inverting Amplifier using Op Amp and calculate gain.
2. Design Adder and Subtractor using Op Amp and verify addition and subtraction process.
3. Design a Comparator using Op-Amp and draw the comparison results of $A=B$, $A<B$, $A>B$.
4. Design a Integrator and Differentiator Circuits using IC741 and derive the required condition practically.
5. Design a Active LPF, HPF cutoff frequency of 2 KHz and find the roll off of it.
6. Design a Circuit using IC741 to generate sine / square / triangular wave with period of 1 KHz and draw the output waveform.
7. Construct Mono-stable Multivibrator using IC555 and draw its output waveform.
8. Construct Astable Multivibrator using IC 555 and draw its output waveform and also find its duty cycle.
9. Design a Schmitt Trigger Circuit and find its LTP and UTP.
10. Design Frequency modulator and demodulator circuit and draw the respective waveforms.
11. Design Voltage Regulator using IC723, IC 7805 / 7809 / 7912 and find its load regulation factor.
12. Design R-2R ladder DAC and find its resolution and write a truth table

with respective voltages.

13. Design Parallel comparator type / counter type / successive approximation ADC and find its efficiency.
14. Design a Gray code converter and verify its truth table.
15. Design an even priority encoder using IC74xx and verify its truth table.
16. Design a 8x1 multiplexer using digital ICs.
17. Design a 4-bit Adder / Subtractor using digital ICs and Add / Sub the following bits.
 (i) 1010 (ii) 0101 (iii)
 1011
 0100 0010 1001.
18. Design a Decade counter and verify its truth table and draw respective waveforms.
19. Design a Up/down counter using IC74163 and draw read/write waveforms.
20. Design a Universal shift register using IC74194 / 195 and verify its shifting operation.
21. Design a 16x4 RAM using 74189 and draw its read /write operation.
22. Design a 8x3 encoder / 3x8 decoder and verify its truth table.

WEB AND MOBILE APPLICATIONS LAB

B Tech II Year II Semester: ECE								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25SD410	Skill Development	L	T	P	1	CIE	SEE	TOTAL
		0	0	2		40	60	100

COURSE OBJECTIVES:

1. To introduce students to basic web and mobile application development.
2. To develop simple Android applications with user interfaces and basic functionality.
3. To develop basic web pages and dynamic web content using PHP, JavaScript, and JSP/Servlets.
4. To integrate web/mobile applications with local storage, simple databases, or APIs

COURSE OUTCOME:

After completion of this lab, students will be able to:

1. Design simple web pages using HTML, CSS, and JavaScript.
2. Validate web for ms and implement basic client-side interactivity.
3. Build Android applications with user input forms, intents, notifications, and alarms.
4. Store and retrieve user data using Shared Preferences or simple files/databases.
5. Integrate mobile applications with web interfaces or APIs for simple projects

List of Experiments:

1. Develop simple web pages using HTML: Home, Registration, and Login pages.
2. Validate Registration and Login pages using JavaScript.
3. Write a PHP script to display prime numbers and perform string operations.
4. Create a dynamic web page using JSP/Servlet or PHP to handle login and display database content.
5. Create an Android application that displays *Hello + User Name*.
6. Design a screen with input fields (Name, Password, Gender, DOB, etc.) and display all data on submit.
7. Create an app with a menu to perform actions: dial number, open website, and send SMS.
8. Develop an app that shows a notification and a toast message when triggered.
9. Build a simple login app that checks credentials stored in a text file or SQLite database.
10. Store and retrieve user data like name, gender, and age.

ENVIRONMENTAL SCIENCE

B Tech II Year II Semester								
Course Code	Category	Hours/ Week			Credits	Maximum Marks		
25VA400	Value Added	L	T	P	1	CIE	SEE	TOTAL
		1	0	0		40	60	100

COURSE OBJECTIVES:

1. Understand the components, structure, and functions of ecosystems and their relevance to human society.
2. Comprehend classification, sustainable management, and challenges of natural resources including water, minerals, land, forests, and energy.
3. Grasp the significance, value, and conservation approaches for biodiversity, including threats and legislative frameworks.
4. Analyze types, sources, and impacts of environmental pollution, and learn technological and policy measures for pollution prevention and control.
5. Develop awareness about global environmental challenges, international agreements, and the role of policy, law, and Environmental Impact Assessment (EIA) in sustainable development.

COURSE OUTCOME:

1. Understand the structure, function, and significance of ecosystems, including energy flow, biogeochemical cycles, and biodiversity conservation through field experiences.
2. Analyze the classification, utilization, and sustainable management of natural resources, along with alternative energy options.
3. Evaluate biodiversity at genetic, species, and ecosystem levels, its values, threats, and conservation methods under national and international frameworks.
4. Identify types, sources, and impacts of environmental pollution, and apply suitable control technologies while assessing global environmental challenges and protocols.
5. Interpret environmental policies, legislation, and the EIA process to propose management plans addressing contemporary environmental and sustainability issues

UNIT-I:

Ecosystems: Definition, Scope, and Importance of ecosystem. Classification, structure, and function of an ecosystem, Food chains, food webs, and ecological pyramids. Flow of energy, Biogeochemical cycles, Bioaccumulation, Bio magnification, ecosystem value, services and carrying capacity, Field visits

UNIT-II:

Natural Resources: Classification of Resources: Living and Non-Living resources, **water resources:** use and over utilization of surface and ground water, floods and droughts, Dams: benefits and problems. **Mineral resources:** use and exploitation, environmental effects of extracting and using mineral resources, **Land resources:** Forest resources, **Energy resources:** growing energy needs, renewable and non-renewable energy sources, use of alternate energy source, case studies.

UNIT-III:

Biodiversity and Biotic Resources: Introduction, Definition, genetic, species and ecosystem diversity. Value of biodiversity; consumptive use, productive use, social, ethical, aesthetic and optional values. India as a mega diversity nation, Hot spots of biodiversity. Field visit. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts; conservation of biodiversity: In- Situ and Ex-situ conservation. National Biodiversity act

UNIT-IV:

Environmental Pollution and Control Technologies: Environmental Pollution: Classification of pollution, **Air Pollution:** Primary and secondary pollutants, Automobile and Industrial pollution, Ambient air quality standards. **Water pollution:** Sources and types of pollution, drinking water quality standards. **Soil Pollution:** Sources and types, Impacts of modern agriculture, degradation of soil.

Noise Pollution: Sources and Health hazards, standards, **Solid waste:** Municipal Solid Waste management, composition and characteristics of e-Waste and its management. **Pollution control technologies:** Wastewater Treatment methods: Primary, secondary and Tertiary. Overview of air pollution control technologies, Concepts of bioremediation.

Global Environmental Issues and Global Efforts: Climate change and impacts on human environment. Ozone depletion and Ozone depleting substances (ODS). Deforestation and desertification. International conventions / Protocols: Earth summit, Kyoto protocol, and Montréal Protocol. NAPCC-GoI Initiatives

UNIT-V:

Environmental Policy, Legislation & EIA: Environmental Protection act, Legal aspects Air Act- 1981, Water Act, Forest Act, Wild life Act, Municipal solid waste management and handling rules, biomedical waste management and handling rules, hazardous waste management and handling rules. EIA: EIA structure, methods of baseline data acquisition. Overview on Impacts of air, water, biological and Socio- economical aspects. Strategies for risk assessment, Concepts of Environmental Management Plan(EMP). Contemporary Environmental Issues Climate change; Sustainable development goals (SDGs); Global environmental challenges; Environmental policies and international agreements

TEXT BOOKS:

1. Introduction to Environmental Science by Y. Anjaneyulu, BS. Publications.
2. Textbook of Environmental Studies for Undergraduate Courses by Erach Bharucha for University Grants Commission.
3. Environmental Studies by R. Rajagopalan, Oxford University Press

REFERENCE BOOKS:

1. Environmental Science: towards a sustainable future by Richard T. Wright. 2008 PHL Learning Private Ltd. New Delhi.
2. Environmental Engineering and science by Gilbert M. Masters and Wendell P. Ela. 2008 PHI Learning Pvt. Ltd.
3. Environmental Science by Daniel B. Botkin & Edward A. Keller, Wiley INDIA edition.
4. Environmental Studies by Anubha Kaushik, 4th Edition, New age international publishers.
5. Text book of Environmental Science and Technology - Dr. M. Anji Reddy 2007, BS
