## VIII. Unit wise Question Bank

Unit-I
Part - A (Short Answer Questions)

| Part - A (Short Answer Questions) |  |  |  |  |
| :---: | :--- | :---: | :--- | :--- |
| 1 | Define the terms (a). coplanar forces (b) concurrent forces | L 1 | CO 1 | $\mathrm{PO} 1, \mathrm{PO} 3$ |
| 2 | State parallelogram law of forces | L 1 | CO 1 | $\mathrm{PO} 1, \mathrm{PO} 3$ |
| 3 | State varignon's theorem | L 1 | CO 1 | $\mathrm{PO} 1, \mathrm{PO} 3$ |
| 4 | Define law of transmissibility of forces with a neat sketch | L 1 | CO 1 | $\mathrm{PO} 1, \mathrm{PO} 3$ |
| 5 | Define couple? What is a moment of a couple? | L 1 | CO 1 | $\mathrm{PO} 1, \mathrm{PO} 3$ |
| 6 | Explain the significance of a free body diagram | L 1 | CO 1 | $\mathrm{PO} 1, \mathrm{PO} 3$ |
| 7 | Distinguish between a resultant force and equilibration force. | L 2 | CO 1 | $\mathrm{PO} 1, \mathrm{PO} 3$ |
| 8 | State the analytical conditions for equilibrium of coplanar forces in <br> a plane. | L 1 | CO 1 | $\mathrm{PO} 1, \mathrm{PO} 3$ |
| 9 | State Lami's theorem. | L 1 | CO 1 | $\mathrm{PO}, \mathrm{PO} 3$ |
| 10 | Determine the resultant of an 800N force acting towards eastern <br> direction and a 500N force actingtowards north eastern direction | L 3 | CO 1 | $\mathrm{PO} 1, \mathrm{PO} 3$ |

Part - B (Long Answer Questions)

| 11 | Four forces act on a 700 mm X 375 mm plate as shown in fig. a) Determine the resultant of these forces b) Locate the two points where the line of action of the resultant intersects the edge of plate. | L3 | CO1 | PO1,PO3 |
| :---: | :---: | :---: | :---: | :---: |
| 12 | The forces shown in the figure below are in equilibrium. Determine the forces F1 and F2 | L3 | CO1 | PO1,PO3 |
| 13 | Four forces act on a square of side 1 m as shown in fig. Reduce the force system into an equivalent force couple system at A. | L3 | CO1 | PO1,PO3 |

| 14 | Reduce the system of forces shown in fig. 5 to a force - couple system at A | CO1 | PO1,PO3 |  |
| :---: | :---: | :---: | :---: | :---: |
| 15 | A crane shown in figure is required to lift a load of $\mathrm{W}=10$ KN . Find the forces in themembers AB and CB | CO1 | PO1 | PO3 |
| 16 | $A \operatorname{rod} A B$ of weight 200 N is supported by a cable BD and the corner of wall and floor surface as shown in fig. Find the reaction at A and tension in the cord. | CO1 | PO1 | PO3 |
|  | IT-II |  |  |  |
| S.No. | Questions | BT | CO | PO |
| Part - A (Short Answer Questions) |  |  |  |  |
| Explain the friction with types. And Distinguish between static friction and kinetic friction |  | L2 | CO2 | PO2,PO4 |
| 2 | Is it possible to eliminate the friction completely from mechanical parts in machines? Discuss. | L4 | CO 2 | PO2,PO4 |
| 3 | Define angle of friction, angle of repose and cone of friction | L1 | CO 2 | PO2,PO4 |
| 4 | Define limiting and impending friction. | L1 | CO 2 | PO2,PO4 |
| 5 | Define ladder friction and discuss the sense the frictional forces acting at the contact points. | L2 | CO2 | PO2,PO4 |
| 6 | Distinguish between centre of gravity and centroid | L4 | CO 2 | PO2,PO4 |
| 7 | Explain how to choose the axes of reference, while determining the coordinates of the centroid? | L2 | CO2 | PO2,PO4 |
| 8 | If an area has two axes of symmetry then where does the centroid lie? | L3 | CO 2 | PO2,PO4 |
| 9 | Can the centroid of a volume coincide with the centroid of its cross section? Explain. | L3 | CO2 | PO2,PO4 |
| 8 | State Pappus theorem | L2 | CO 2 | PO2,PO4 |
| 9 | Define surface of revolution and volume of revolution | L1 | CO 2 | PO2,PO4 |
| 10 | Under what condition does center of mass coincide with the center of gravity | L3 | CO 2 | PO2,PO4 |

## Part - B (Long Answer Questions)

| Part - B (Long Answer Questions) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 11 | A man wishing to slide a stone block of weight 1000 N over a horizontal concrete floor, ties a rope to the block and pulls it in a direction inclined upward at an angle of $20^{\circ}$ to the horizontal. Calculate the minimum pull necessary to slide the block if the coefficient of friction $\mu=0.6$. Calculate also the pull required if the inclination of the rope with the horizontal is equal to the angle of friction and prove that this is the least force required to slide the block. | L2 | CO 2 | PO2,PO4 |
| 12 | A block over lying a $10^{\circ}$ wedge on a horizontal floor and leaning against a vertical wall and weighing 1500 N is to be raised by applying a horizontal force to the wedge. Assuming co-efficient of friction between all the surfaces in contact to be 0.3 , determine the minimum horizontal force to be applied to raise the block. | L3 | CO 2 | PO2,PO4 |
| 13 | A screw-jack is used to lift a load of 5 kN . The jack has screw with square threads having two threads per 12 mm length. If the co-efficient of friction between the nut and the screw is 0.08 and outer dia. of the screw is 60 mm , find the force required at the end of the 600 mm long lever to lift the load. | L3 | CO2 | PO2,PO4 |
| 14 | Using the analytical method, determine the centre of gravity of the plane uniform lamina shown in Fig. | L3 | CO2 | PO2,PO4 |
| 15 | A semi-circular area is removed from the trapezoid as shown in Fig. Determine the centroid of the remaining area. | L3 | CO 2 | PO2,PO4 |
| 16 | Determine the co-ordinates of the C.G. of the area OAB shown in Fig., if the curve OB represents the equation of a parabola, given by $\mathrm{y}=\mathrm{kx}^{2}$ in which $\mathrm{OA}=6$ units and $\mathrm{AB}=4$ units. | L4 | CO 2 | PO2,PO4 |

## Unit-III

|  | Questions | BT | CO | PO |
| :---: | :---: | :---: | :---: | :---: |
| Part - A (Short Answer Questions) |  |  |  |  |
|  | Differentiate between first and second moment of an area | L2 | CO3 | PO1,PO3 |
|  | Moment of inertia gives a measure of resistance to bending in the case of sections or plane areas. Discuss. | L3 | CO3 | PO1,PO3 |
|  | Differentiate between polar moment of inertia and product of inertia. | L3 | CO3 | PO1,PO3 |
|  | Product of inertia for sections with an axis of symmetry is zero. Explain. | L3 | CO3 | PO1,PO3 |
|  | Define principal axes and principal moments of inertia | L1 | CO 3 | PO1,PO3 |
|  | Define mass moment of inertia and explain transfer formula for mass moment of inertia. | L1 | CO3 | PO1,PO3 |
|  | Define of radius of gyration for mass moment of inertia | L1 | CO 3 | PO1,PO3 |
|  | State the relationship between the area moment of inertia and mass moment of inertia for thin uniform plate. | L2 | CO3 | PO1,PO3 |
|  | Derive the expression for the moment of inertia of a cylinder of length 1 , radius $r$ and density $\rho$ about the horizontal centroidal axis and about the centroidal transverse axis. | L2 | CO3 | PO1,PO3 |
|  | Show that the moment of inertia of a thin circular ring of mass M and mean radius R with respect to its geometric axis is $\mathrm{MR}^{2}$. | L2 | CO3 | PO1,PO3 |
| Part - B (Long Answer Questions) |  |  |  |  |
| 11 | Determine the polar moment of inertia of I-section shown in Fig. | L3 | CO3 | PO1,PO3 |
| 12 | Find the moment of inertia of the area shown shaded in Fig., about edge AB. $\qquad$ | L3 | CO3 | PO1,PO3 |
| 13 | Find the moments of inertia about the centroidal XX and YY axes of the section shown in Fig. | L3 | CO3 | PO1,PO3 |
| 14 | Derive the expression for Mass Moment of Inertia of a Right Circular Cone of Base Radius R, Height H and Mass M about its Axis. | L3 | CO3 | PO1,PO3 |

| 15 | A toy top made up of wood as a hemispherical portion of 8 cm diameter and cone of 6 cm height as shown. Determine the mass moment of inertia of the top about the axis of revolution, if density of the material is $75 \mathrm{~kg} / \mathrm{m}^{3}$. | L3 | CO3 | PO1,PO3 |
| :---: | :---: | :---: | :---: | :---: |
| 16 | From the prism of dimensions $40 \mathrm{cmX30} \mathrm{cmX10} \mathrm{~cm}$, a block of dimensions $10 \mathrm{~cm} X 15 \mathrm{cmX} 10 \mathrm{~cm}$ is removed as shown. Determine the mass moment of inertia of the remaining block about axis $\mathrm{CC}_{1}$ and $\mathrm{AA}_{1}$. Take density of material to be $1250 \mathrm{~kg} / \mathrm{m}^{3}$. | L3 | CO3 | PO1,PO3 |

UNIT-IV

| S.No. | Questions | BT | CO | PO |
| :---: | :---: | :---: | :---: | :---: |
| Part - A (Short Answer Questions) |  |  |  |  |
| 1 | Explain the types of motion with suitable examples. | L3 | CO 4 | PO1,PO2 |
| 2 | State the differential equations of motion. | L1 | CO4 | PO1,PO2 |
| 3 | Mention the assumptions made for the projectile motion. | L2 | CO4 | PO1,PO2 |
| 4 | Derive the expressions for (i) time of flight (ii) range when a particle is projected on an inclined plane | L2 | CO4 | PO1,PO2 |
| 5 | Define range of projectile and the condition for maximum range. | L1 | CO4 | PO1,PO2 |
| 6 | Distinguish between kinematics and kinetics | L2 | CO4 | PO1,PO2 |
| 7 | State D'Alembert's principle. | L1 | CO4 | PO1,PO2 |
| 8 | Derive mathematical expression for Newton's second law of motion. | L2 | CO4 | PO1,PO2 |
| 9 | Discuss the forces providing the normal acceleration in circular motions considering various examples. | L3 | CO 4 | PO1,PO2 |
| 10 | A stone is dropped into a well and the sound of splash is heard after 4seconds. Assuming the velocity of sound to be $350 \mathrm{~m} / \mathrm{s}$ find the depth of the well. | L3 | CO 4 | PO1,PO2 |

Part - B (Long Answer Questions)
The motion of a particle in rectilinear motion is defined by the relation $x=t^{3}-8 t^{2}+16 t-5$, where $x$ and $t$ are represented in meters 11 and seconds respectively. Determine (i) the instants when velocity is zero, (ii) the position and acceleration at those instants of time, (iii) the instant when acceleration is zero, (iv) the position, the displacement and the total distance travelled when the acceleration is zero.
The driver of the car moving at the constant speed of 36 kmph sees the signal turning red when he is 50 m from the signal. The reaction time of the driver i.e., the time interval between the perception of a signal to stop and the application of brakes is

|  |  |  |
| :--- | :--- | :--- |
| L3 | CO 4 | $\mathrm{PO} 1, \mathrm{PO} 2$ |
| L 2 | CO 4 | $\mathrm{PO} 1, \mathrm{PO} 2$ |

|  | 0.7 s . If the car begins to decelerate at a constant rate upon the application of brakes, determine (i) the minimum deceleration of the car required to bring it to a halt just before the signal, (ii) time taken to bring the car to a halt. |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 13 | A bus moving along a curved road with a constant speed of 45 kmph decelerates at a constant rate to a halt in 10 secs. Determine a total acceleration at the instant the brake is applied. Radius of curvature is 100 m . | L3 | CO 4 | PO1,PO2 |
| 14 | Find the expressions for the acceleration of the system shown in fig. and the tension in the string. If $\mathrm{m}_{1}=2 \mathrm{~kg}, \mathrm{~m}_{2}=1 \mathrm{~kg}, \theta=30^{\circ}$ and $\mu=0.2$ for all contact surfaces, determine the pulleys and masses and friction less and the string is inextensible. | L3 | CO 4 | PO1,PO2 |
| 15 | A block of 10kg mass resting on the smooth horizontal plane is acted on by a horizontal force F that varies with time as shown in fig. determine the velocity and displacement of the block just after 10sec. | L3 | CO 4 | PO1,PO2 |
| 16 | A body of 3 kg mass is suspended by an extensible string of 1 m length. It is rotated in a circular path of 0.5 m radius as shown in fig. Determine the tension in the string and the constant speed of the body. | L3 | CO 4 | PO1,PO2 |

UNIT-V

| S.No. | Questions | BT | CO | PO |  |  |
| :---: | :--- | :---: | :---: | :---: | :---: | :---: |
| Part - A (Short Answer Questions) |  |  |  |  |  |  |
| 1 | Define work done on a body (a) by a constant force, and (b) by a <br> varying force. | L1 | CO5 | PO1,PO4 |  |  |
| 2 | Under what conditions does the work upon a body become zero? | L2 | CO5 | PO1,PO4 |  |  |
| 3 | Derive the expression for work done upon stretching a spring <br> without accelerating it. | L2 | CO5 | PO1,PO4 |  |  |
| 4 | State work-energy principle | L1 | CO5 | PO1,PO4 |  |  |
| 5 | Show that the energy of a freely falling body id constant. | L3 | CO5 | PO1,PO4 |  |  |
| 6 | Differentiate between impulsive force and impulse of a force | L2 | CO5 | PO1,PO4 |  |  |
| 7 | Discuss the effect of an impact of jet of water on plates or vanes <br> and where they find application. | L4 | CO5 | PO1,PO4 |  |  |
| 8 | Derive the expression for a mass of water striking an obstruction | L2 | CO5 | PO1,PO4 |  |  |
| 9 | Differentiate between work-energy and impulse-momentum | L2 | CO5 | PO1,PO4 |  |  |

|  | methods. |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 10 | State co efficient of restitution | L1 | CO5 | PO1,PO4 |
| Part - B (Long Answer Questions) |  |  |  |  |
| 11 | Determine the work done by the force of gravity on a body of kg mass as (i) it falls vertically downwards through a distance of 3 m , and (ii) as it slides down an inclined plane with a slope of 0.75 . What do you infer from the result? | L3 | CO5 | PO1,PO4 |
| 12 | A body of mass 5 kg is tied to an inextensible string. Determine the work done by the external agent on the body, if (i) it is lowered down at a constant speed through a distance of 3 m , (ii) if it is lowered down at a constant acceleration of $1 \mathrm{~m} / \mathrm{s}^{2}$ through the same distance, (iii) if it is lifted up at a constant velocity by a distance of 3 m , (iv) if it is lifted up at a constant acceleration of $1 \mathrm{~m} / \mathrm{s}^{2}$ by the same distance. | L3 | CO5 | PO1,PO4 |
| 13 | A block of 5 kg mass slides down an inclined plane from rest. How far along the horizontal plane, will it reach before coming to rest? The coefficient of kinetic friction between the block and the inclined plane is 0.15 and that between block and the horizontal plane is 0.2 | L3 | CO5 | PO1,PO4 |
| 14 | A force acting on a body of 2 kg mass for a short duration varies with time as shown. Determine the final velocity of the body after 3seconds, if the body is initially (i) at rest, (ii) moving with a velocity of $5 \mathrm{~m} / \mathrm{s}$ in the positive $x$ direction, and (iii) moving with a velocity of $5 \mathrm{~m} / \mathrm{s}$ in the negative $x$ direction. | L3 | CO5 | PO1,PO4 |
| 15 | A ball of 100 g mass is projected up with a velocity of $20 \mathrm{~m} / \mathrm{s}$. It hits a ceiling that is 10 m above the point of projection. If $e=3 / 4$, determine the speed of ball as it descends to the point of projection. If the impact duration is $1 / 150^{\text {th }}$ of a second, determine the impulsive force. | L3 | CO5 | PO1,PO4 |
| 16 | A smooth sphere moving at $10 \mathrm{~m} / \mathrm{s}$ in the direction shown collides with another smooth sphere of double its mass and moving with $5 \mathrm{~m} / \mathrm{s}$ in the direction shown. If the coefficient of restitution is $2 / 3$, determine their velocities after collision. | L3 | CO5 | PO1,PO4 |
